SAFETY INFORMATION

WARNING

If the information in these instructions are not followed exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

- Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.
- WHAT TO DO IF YOU SMELL GAS:
- **Do not try to light any appliance.**
- **Do not touch any electrical switch; do not use any phone in your building.**
- **Immediately call your gas supplier from a neighbour's phone. Follow the gas supplier's instructions.**
- **If you cannot reach your gas supplier, call the fire department.**

- Installation and service must be performed by a qualified installer, service agency or the supplier.

This appliance may be installed in an aftermarket, permanently located, manufactured home (USA only) or mobile home, where not prohibited by local codes.

This appliance is only for use with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gases, unless a certified kit is used.

WARNING

HOT GLASS WILL CAUSE BURNS.

DO NOT TOUCH GLASS UNTIL COOLED.

NEVER ALLOW CHILDREN TO TOUCH GLASS.

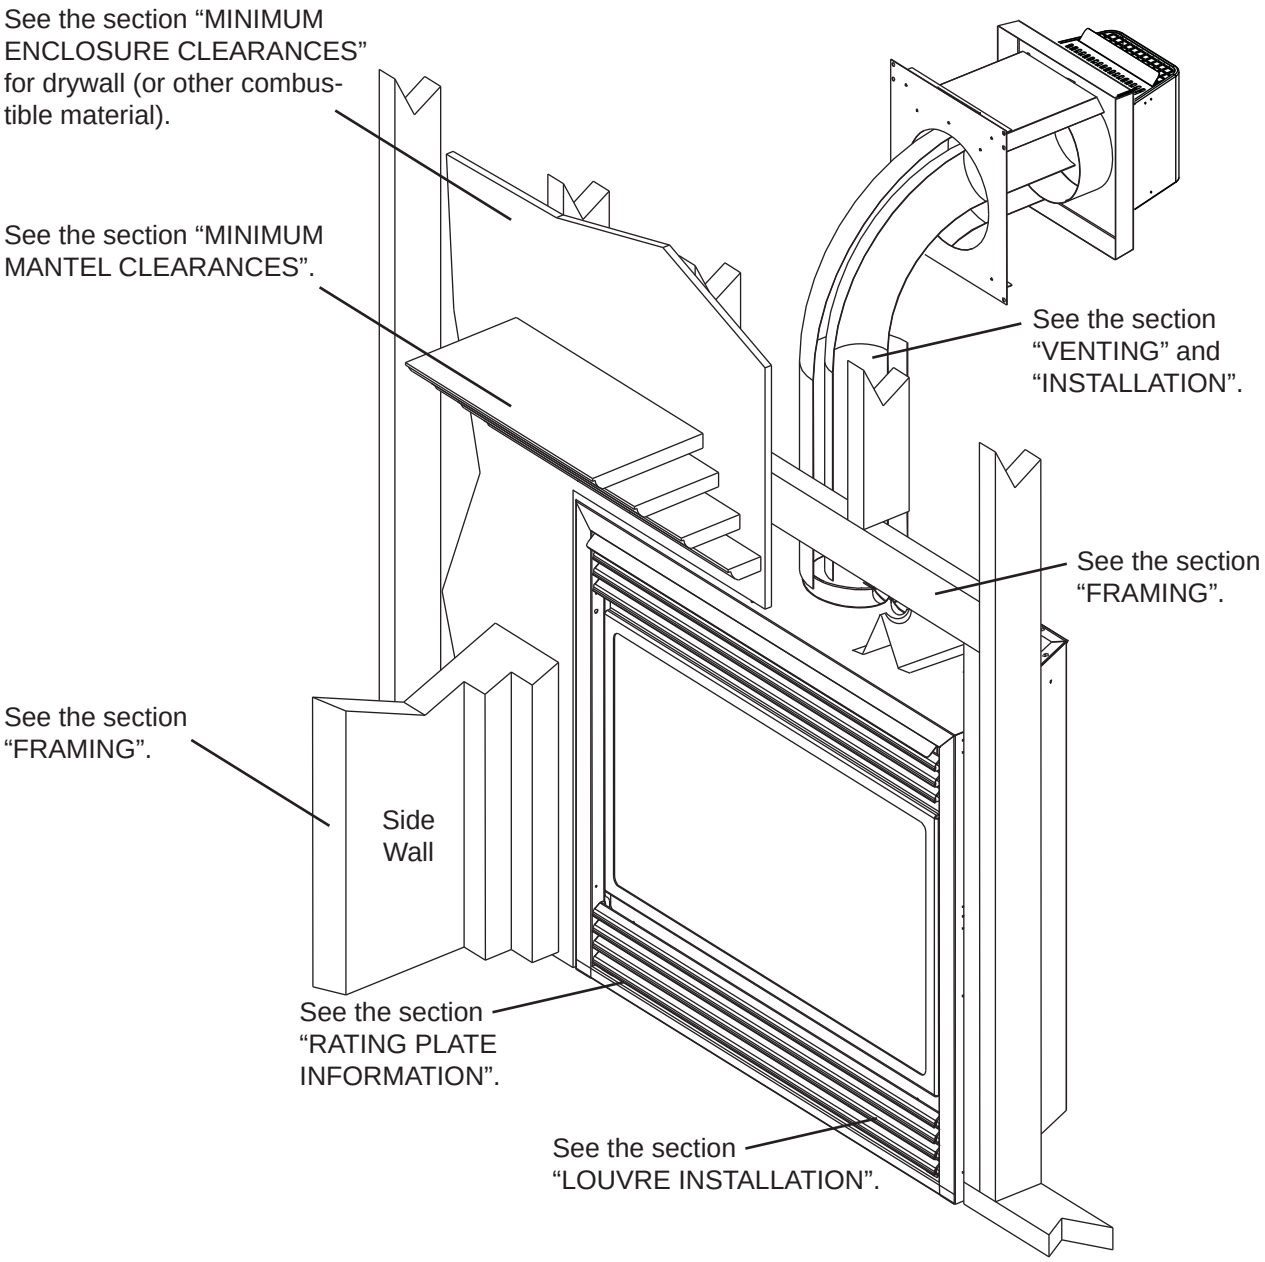
1.0 INSTALLATION OVERVIEW



2.0 INTRODUCTION

⚠ WARNING

- **THIS APPLIANCE IS HOT WHEN OPERATED AND CAN CAUSE SEVERE BURNS IF CONTACTED.**
- **ANY CHANGES TO THIS APPLIANCE OR IT'S CONTROLS CAN BE DANGEROUS AND IS PROHIBITED.**
- Do not operate appliance before reading and understanding operating instructions. Failure to operate appliance according to operating instructions could cause fire or injury.
- Risk of fire or asphyxiation do not operate appliance with fixed glass removed.
- Do not connect 110 volts to the control valve.
- Risk of burns. The appliance should be turned off and cooled before servicing.
- Do not install damaged, incomplete or substitute components.
- Risk of cuts and abrasions. Wear protective gloves and safety glasses during installation. Sheet metal edges may be sharp.
- Do not burn wood or other materials in this appliance.
- Children and adults should be alerted to the hazards of high surface temperature and should stay away to avoid burns or clothing ignition.
- Young children should be carefully supervised when they are in the same room as the appliance. Toddlers, young children and others may be susceptible to accidental contact burns. A physical barrier is recommended if there are at risk individuals in the house. To restrict access to an appliance or stove, install an adjustable safety gate to keep toddlers, young children and other at risk individuals out of the room and away from hot surfaces.
- Clothing or other flammable material should not be placed on or near the appliance.
- Due to high temperatures, the appliance should be located out of traffic and away from furniture and draperies.
- Ensure you have incorporated adequate safety measure to protect infants/toddlers from touching hot surfaces.
- Even after the appliance is out, the glass and/or screen will remain hot for an extended period of time.
- Check with your local hearth specialty dealer for safety screens and hearth guards to protect children from hot surfaces. These screens and guards must be fastened to the floor.
- Any safety screen or guard removed for servicing must be replaced prior to operating the appliance.
- The appliance is a vented gas-fired appliance. Do not burn wood or other materials in the appliance.
- It is imperative that the control compartments, burners and circulating blower and its passageway in the appliance and venting system are kept clean. The appliance and its venting system should be inspected before use and at least annually by a qualified service person. More frequent cleaning may be required due to excessive lint from carpeting, bedding material, etc. The appliance area must be kept clear and free from combustible materials, gasoline and other flammable vapors and liquids.
- Under no circumstances should this appliance be modified.
- This appliance must not be connected to a chimney flue pipe serving a separate solid fuel burning appliance.
- Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.
- Do not operate the appliance with the glass door removed, cracked or broken. Replacement of the glass should be done by a licensed or qualified service person.
- Do not strike or slam shut the appliance glass door.
- When equipped with pressure relief doors, they must be kept closed while the appliance is operating to prevent exhaust fumes containing carbon monoxide, from entering into the home. Temperatures of the exhaust escaping through these openings can also cause the surrounding combustible materials to overheat and catch fire.Only doors / optional fronts certified with the unit are to be installed on the appliance.
- Only doors / optional fronts certified with the unit are to be installed on the appliance.
- Keep the packaging material out of reach of children and dispose of the material in a safe manner. As with all plastic bags, these are not toys and should be kept away from children and infants.
- As with any combustion appliance, we recommend having your appliance regularly inspected and serviced as well as having a Carbon Monoxide Detector installed in the same area to defend you and your family against Carbon Monoxide.
- Ensure clearances to combustibles are maintained when building a mantel or shelves above the appliance. Elevated temperatures on the wall or in the air above the appliance can cause melting, discolouration or damage to decorations, a T.V. or other electronic components.
- This appliance uses and requires a fast acting thermocouple. Replace only with a fast acting thermocouple supplied by Wolf Steel Ltd.

2.3 GENERAL INSTRUCTIONS

⚠ WARNING
ALWAYS LIGHT THE PILOT WHETHER FOR THE FIRST TIME OR IF THE GAS SUPPLY HAS RUN OUT, WITH THE GLASS DOOR OPENED OR REMOVED.
PROVIDE ADEQUATE CLEARANCE FOR SERVICING AND OPERATING THE APPLIANCE.
PROVIDE ADEQUATE VENTILATION.
NEVER OBSTRUCT THE FRONT OPENING OF THE APPLIANCE.
OBJECTS PLACED IN FRONT OF THE APPLIANCE MUST BE KEPT A MINIMUM OF 48” FROM THE FRONT FACE OF THE APPLIANCE.
SURFACES AROUND AND ESPECIALLY ABOVE THE APPLIANCE CAN BECOME HOT. AVOID CONTACT WHEN THE APPLIANCE IS OPERATING.
FIRE RISK. EXPLOSION HAZARD.
HIGH PRESSURE WILL DAMAGE VALVE. DISCONNECT GAS SUPPLY PIPING BEFORE PRESSURE TESTING GAS LINE AT TEST PRESSURES ABOVE 1/2 PSIG. CLOSE THE MANUAL SHUT-OFF VALVE BEFORE PRESSURE TESTING GAS LINE AT TEST PRESSURES EQUAL TO OR LESS THAN 1/2 PSIG.
USE ONLY WOLF STEEL APPROVED OPTIONAL ACCESSORIES AND REPLACEMENT PARTS WITH THIS APPLIANCE. USING NON-LISTED ACCESSORIES (BLOWERS, DOORS, LOUVRES, TRIMS, GAS COMPONENTS, VENTING COMPONENTS, ETC.) COULD RESULT IN A SAFETY HAZARD AND WILL VOID THE WARRANTY AND CERTIFICATION.

THIS GAS APPLIANCE SHOULD BE INSTALLED AND SERVICED BY A QUALIFIED INSTALLER to conform with local codes. Installation practices vary from region to region and it is important to know the specifics that apply to your area, for example in Massachusetts State:

- This product must be installed by a licensed plumber or gas fitter when installed within the commonwealth of Massachusetts.
- The appliance damper must be removed or welded in the open position prior to installation of a appliance insert or gas log.
- The appliance off valve must be a “T” handle gas cock.
- The flexible connector must not be longer than 36 inches.
- A Carbon Monoxide detector is required in all rooms containing gas fired appliances.
- The appliance is not approved for installation in a bedroom or bathroom unless the unit is a direct vent sealed combustion product.

The installation must conform with local codes or, in absence of local codes, the National Gas and Propane Installation Code CSA B149.1 in Canada, or the National Fuel Gas Code, ANSI Z223.1 / NFPA 54 in the United States. Suitable for mobile home installation if installed in accordance with the current standard CAN/CSA Z240MH Series, for gas equipped mobile homes, in Canada or ANSI Z223.1 and NFPA 54 in the United States.

NATIONAL FIREPLACE INSTITUTE NFI CERTIFIED www.nficertified.org

We suggest that our gas hearth products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute® (NFI) as NFI Gas Specialists

As long as the required clearance to combustibles is maintained, the most desirable and beneficial location for an appliance is in the center of a building, thereby allowing the most efficient use of the heat created. The location of windows, doors and the traffic flow in the room where the appliance is to be located should be considered. If possible, you should choose a location where the vent will pass through the house without cutting a floor or roof joist.

If the appliance is installed directly on carpeting, vinyl tile or other combustible material other than wood flooring, the appliance shall be installed on a metal or wood panel extending the full width and depth.

Some appliances have optional fans or blowers. If an optional fan or blower is installed, the junction box must be electrically connected and grounded in accordance with local codes, use the current CSA C22.1 Canadian Electrical Code in Canada or the ANSI/NFPA 70 National Electrical code in the United States.

4.1A

2.4 GENERAL INFORMATION

FOR YOUR SATISFACTION, THIS APPLIANCE HAS BEEN TEST-FIRED TO ASSURE ITS OPERATION AND QUALITY!

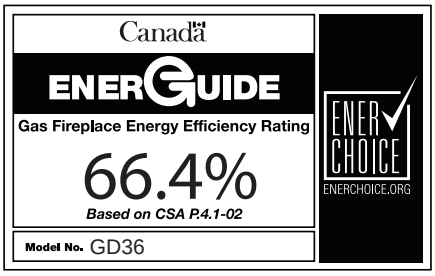
This appliance is approved for bathroom, bedroom and bed-sitting room installations and is suitable for mobile home installation.

No external electricity (110 volts or 24 volts) is required for the gas system operation.

Expansion / contraction noises during heating up and cooling down cycles are normal and are to be expected.



2.5 RATING PLATE INFORMATION

CERTIFIED UNDER / HOMOLOGUE SELON LES NORMES: CSA 2.22b-2009, ANSI Z21.50b-2009 VENTED GAS FIREPLACE / FOYER AU GAZ AVEC EVACUATION.

DIRECT VENT GAS FIREPLACE. SUITABLE FOR BEDROOM, BATHROOM AND BED-SITTING ROOM INSTALLATION. SUITABLE FOR MOBILE HOME INSTALLATION IF INSTALLED IN ACCORDANCE WITH THE CURRENT STANDARD CAN/CSA Z240MH SERIES GAS EQUIPPED MOBILE HOMES, IN CANADA OR IN THE UNITED STATES THE MANUFACTURED HOME CONTRUCTION AND SAFETY STANDARD, TITLE 24 CFR, PART 3280. WHEN THIS US STANDARD IS NOT APPLICABLE USE THE STANDARD FOR FIRE SAFETY CRITERIA FOR MANUFACTURED HOME INSTALLATIONS, SITES AND COMMUNITIES, ANSI / NFPA 501A. WHEN INSTALLED WITH SCREEN KIT GD-565KT, THE FIREPLACE COMPLIES WITH CGA CERTIFICATION REQUIREMENT CR95-006.

FOYER A GAZ VENTILE DIRECT. HOMOLOGUE POUR INSTALLATION DANS UNE CHAMBRE A COUCHER, UNE SALLE DE BAIN ET UN STUDIO APPROPRIE POUR INSTALLATION DANS UNE MAISON MOBILE SI SON INSTALLATION CONFORME AUX EXIGENCES DE LA NORME CAN/CSA Z240MH SERIE DE MAISONS MOBILES EQUIPEES AU GAZ, EN VIGUEUR AU CANADA OU AUX ETATS-UNIS DE LA NORME DE SECURITE ET DE CONSTRUCTION DE MAISONS MANUFACTUREES, TITRE 24 CFR, SECTION 3280. DANS LE CAS OU CETTE NORME D'ETATS-UNIS NE PEUT ETRE APPLIQUEE, SE REFERER A LA NORME RELATIVE AU CRITERE DE MESURES DE SECURITE CONTRE L'INCENDIE POUR LES INSTALLATIONS DANS LES MAISONS MANUFACTURES, LES SITES ET LES COMMUNAUTES, ANSI/NFPA 501A. LORSQU'IL EST INSTALLE AVEC LA TROUSSE POUR ECRAN GD-565KT, LE FOYER EST CONFORME A LA NORME DE CERTIFICATION DE L'ACG CR95-006.

<u>INSTALLER:</u> It is your responsibility to check off the appropriate box on the rating plate according to the model, venting and gas type of the appliance.

For rating plate location, see “INSTALLATION OVERVIEW” section.

This illustration is for reference only. Refer to the rating plate on the appliance for accurate information.

3.0 VENTING

Models GD36 and BGD36 may be vented either as a top vent or a rear vent.
Refer to the section applicable to your installation.

⚠ WARNING

RISK OF FIRE, MAINTAIN SPECIFIED AIR SPACE CLEARANCES TO VENT PIPE AND APPLIANCE.

IF VENTING IS INCLUDED WITH SPACERS THE VENT SYSTEM MUST BE SUPPORTED EVERY 3 FEET FOR BOTH VERTICAL AND HORIZONTAL RUNS. USE SUPPORTS OR EQUIVALENT NON-COMBUSTIBLE STRAPPING TO MAINTAIN THE REQUIRED CLEARANCE FROM COMBUSTIBLES. USE WOLF STEEL LTD. SUPPORT RING ASSEMBLY W010-0370 OR EQUIVALENT NON-COMBUSTIBLE STRAPPING TO MAINTAIN THE MINIMUM CLEARANCE TO COMBUSTIBLES FOR BOTH VERTICAL AND HORIZONTAL RUNS. SPACERS ARE ATTACHED TO THE INNER PIPE AT PREDETERMINED INTERVALS TO MAINTAIN AN EVEN AIR GAP TO THE OUTER PIPE. THIS GAP IS REQUIRED FOR SAFE OPERATION. A SPACER IS REQUIRED AT THE START, MIDDLE AND END OF EACH ELBOW TO ENSURE THIS GAP IS MAINTAINED. THESE SPACERS MUST NOT BE REMOVED.

THIS APPLIANCE USES A 4” EXHAUST / 7” AIR INTAKE VENT PIPE SYSTEM.
Refer to the section applicable to your installation.

For safe and proper operation of the appliance follow the venting instruction exactly. Deviation from the minimum vertical vent length can create difficulty in burner start-up and/or carboning. Under extreme vent configurations, allow several minutes (5-15) for the flame to stabilize after ignition. Provide a means for visually checking the vent connection to the appliance after the appliance is installed. Use a firestop, vent pipe shield or attic insulation shield when penetrating interior walls, floor or ceiling.

NOTE: If for any reason the vent air intake system is disassembled; reinstall per the instructions provided for the initial installation.

7.1A

3.1 VENTING LENGTHS AND COMPONENTS

Use only Wolf Steel, Simpson Dura-Vent, Selkirk Direct Temp, American Metal Amerivent or Metal-Fab venting components. Minimum and maximum vent lengths, for both horizontal and vertical installations, and air terminal locations for either system are set out in this manual and must be adhered to. For Simpson Dura-Vent, Selkirk Direct Temp, American Metal Amerivent and Metal-Fab follow the installation procedure provided with the venting components.

A starter adaptor must be used with the following vent systems and may be purchased from the corresponding supplier:

PART	4"/7"	SUPPLIER	WEBSITE
Duravent	W175-0053	Wolf Steel	www.duravent.com
Amerivent	4DSC-N2	American Metal	www.americanmetalproducts.com
Direct Temp	4DT-AAN	Selkirk	www.selkirkcorp.com
SuperSeal	4DNA	Metal-Fab	www.mtlfab.com

For Simpson Dura-Vent, Selkirk Direct Temp, American Metal Amerivent and Metal-Fab follow the installation procedure found on the website for your venting supplier.

For vent systems that provide seals on the inner exhaust flue, only the outer air intake joints must be sealed using a red high temperature silicone (RTV). This same sealant may be used on both the inner exhaust and outer intake vent pipe joints of all other approved vent systems except for the exhaust vent pipe connection to the appliance flue collar which must be sealed using the black high temperature sealant Mill Pac. High temperature sealant must be ordered separately.

When using Wolf Steel venting components, use only approved Wolf Steel rigid / flexible components with the following termination kits: wall terminal kit **GD222**, **GD222R**, or 1/12 to 7/12 pitch roof terminal kit **GD110**, 8/12 to 12/12 roof terminal kit **GD111**, flat roof terminal kit **GD112** or periscope kit **GD201** (for wall penetration below grade). With flexible venting, in conjunction with the various terminations, use either the 5 foot vent kit **GD220** or the 10 foot vent kit **GD330**.

For optimum flame appearance and appliance performance, keep the vent length and number of elbows to a minimum. The air terminal must remain unobstructed at all times. Examine the air terminal at least once a year to verify that it is unobstructed and undamaged.
Rigid and flexible venting systems must not be combined. Different venting manufacturer components must not be combined.

These vent kits allow for either horizontal or vertical venting of the appliance. The maximum allowable horizontal run is 20 feet. The maximum allowable vertical vent length is 40 feet. The maximum number of vent connections is two horizontally or three vertically (excluding the appliance and the air terminal connections) when using flexible venting.

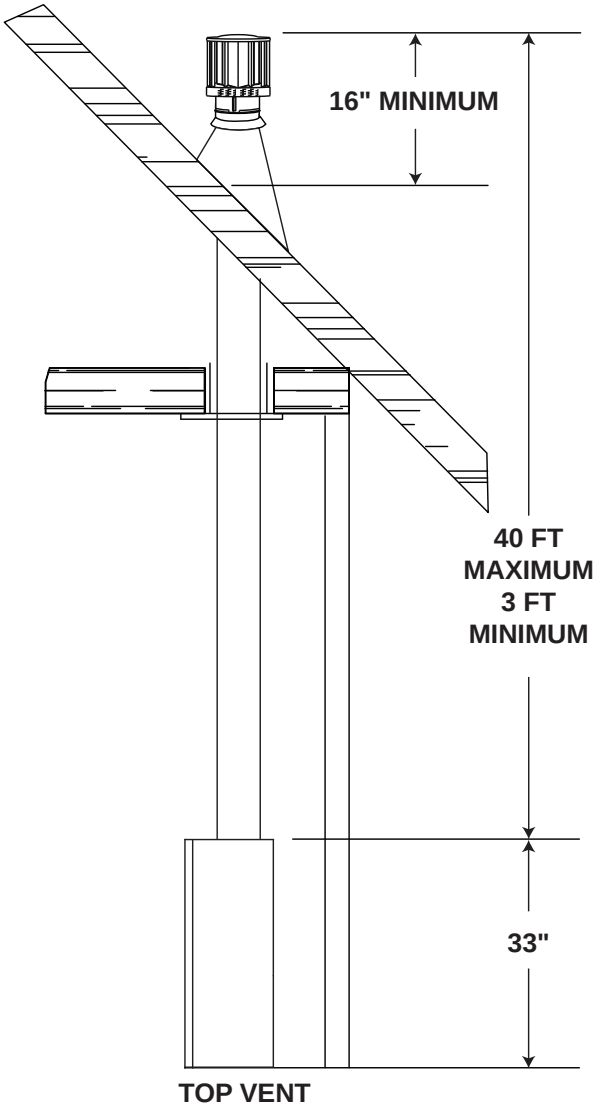
8.1

For optimum performance, it is recommended that all horizontal runs have a 1" rise per foot.

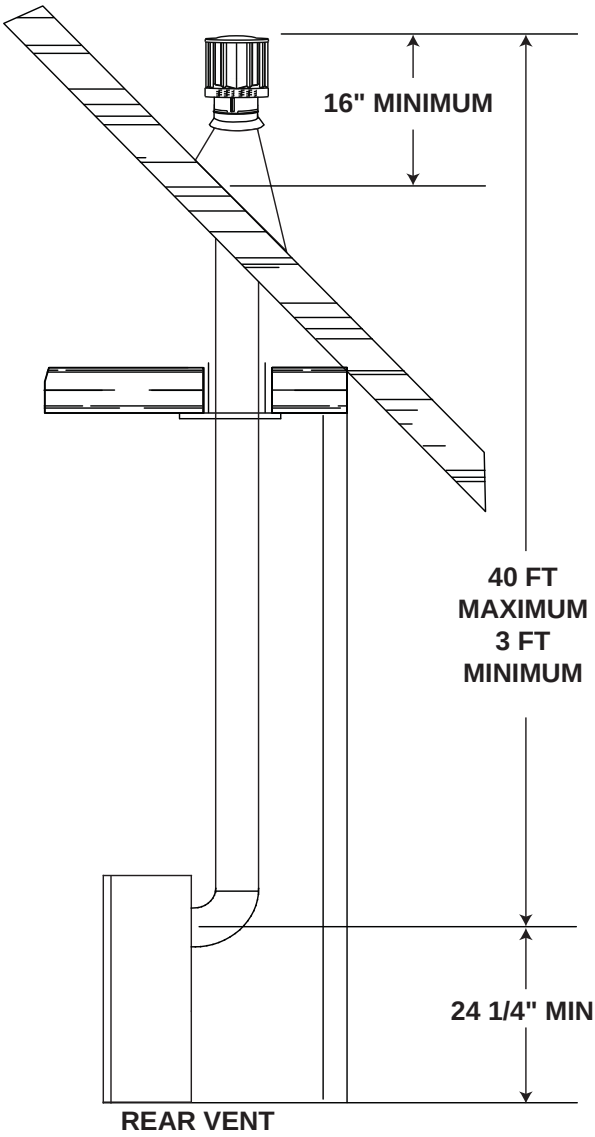
GD36 REQUIRED RISE ON HORIZONTAL VENTING			BGD36 REQUIRED RISE ON HORIZONTAL VENTING		
Rear Vent	Rigid Venting	1" / FT**	**Rear Vent**	Rigid Venting	0" / FT
	Flexible Venting	1" / FT**		Flexible Venting	0" / FT
Top Vent	Rigid Venting	0" / FT	**Top Vent**	Rigid Venting	0" / FT
	Flexible Venting	0" / FT		Flexible Venting	0" / FT
Corner Vent	Rigid Venting	6"	**Corner Vent**	Rigid Venting	0"
	Flexible Venting	6"		Flexible Venting	6"

** When a vertical rise is used as part of the venting configuration, a 0" rise per foot is acceptable.

3.2 TYPICAL VENT INSTALLATION

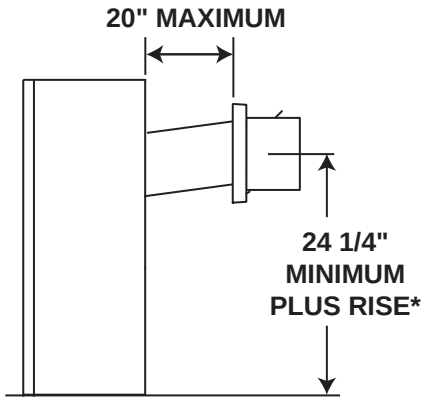


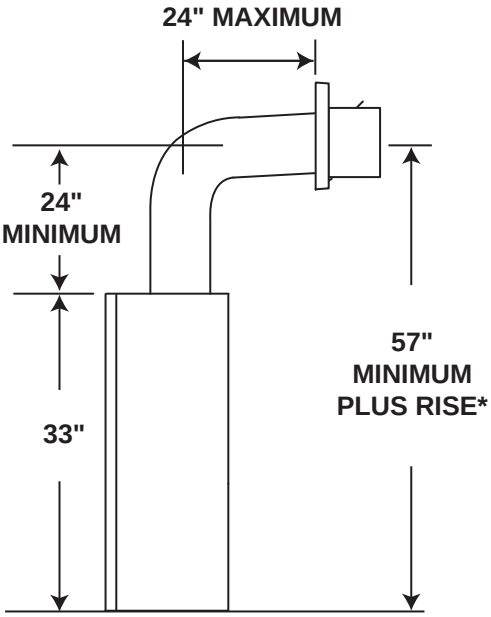
TOP VENT



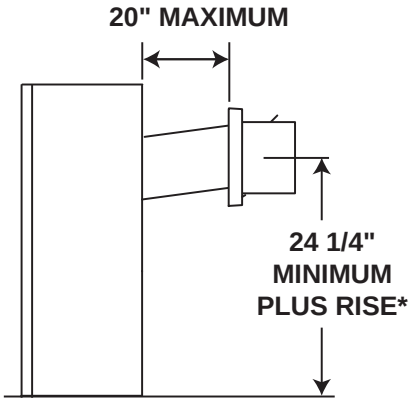
REAR VENT

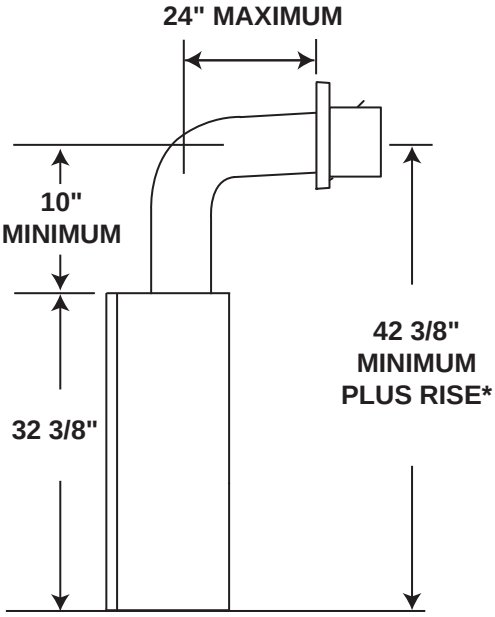
GD36





BGD36



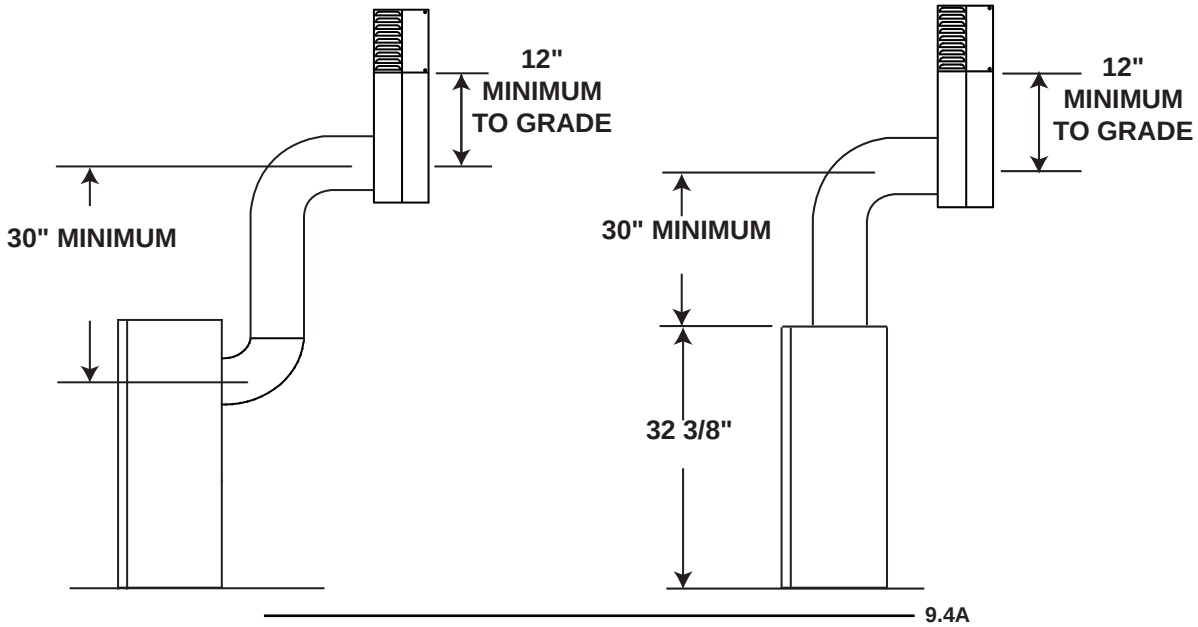


* See "VENTING" section

3.3 SPECIAL VENT INSTALLATIONS

3.3.1 PERISCOPE TERMINATION (GD36 AND BGD36)

Use the periscope kit to locate the air termination above grade. The periscope must be installed so that when final grading is completed, the bottom air slot is located a minimum 12” above grade. The maximum allowable vent length is 10’ for a fireplace and 8’ for a stove.



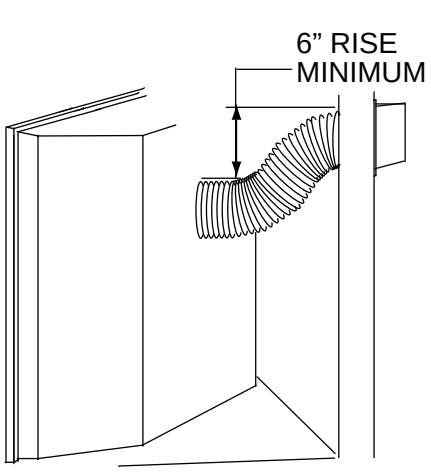
3.3.2 CORNER TERMINATION

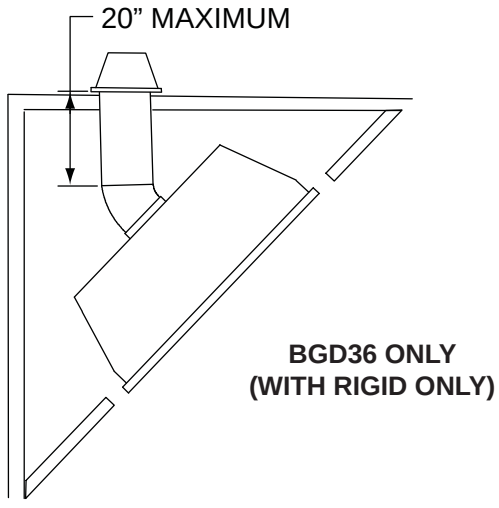
GD36

The maximum vent length for a corner installation is 24", where only 6" of vertical rise is used. All corner installations require a minimum 6" rise. See illustration below.

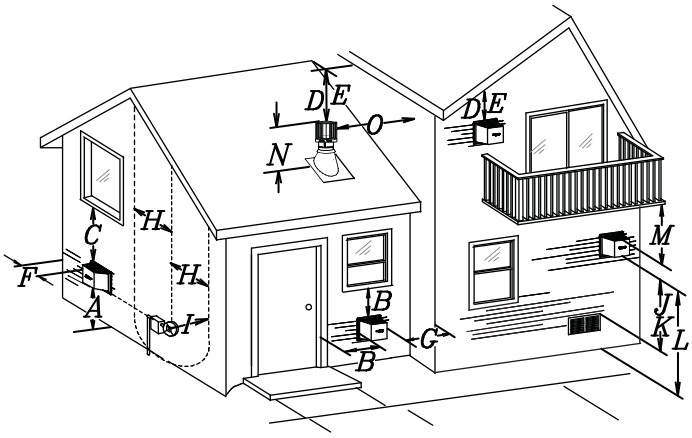
BGD36

The maximum vent length for a corner installation is 20" of horizontal run, in addition to 45° offset. In this case 0" rise is acceptable when using rigid. Flexible venting must maintain a 6" rise. See illustration below.

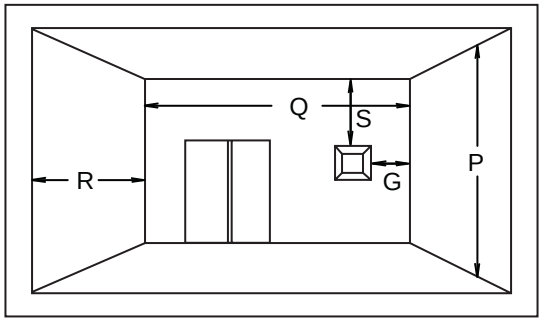




3.4 MINIMUM AIR TERMINAL LOCATION CLEARANCES



COVERED BALCONY APPLICATIONS ††*



Q_{MIN}	= 3 feet
R_{MAX}	= 2 x Q_{ACTUAL}
R_{MAX}	≤ 15 feet

	INSTALLATIONS		
	CANADA	U.S.A.	
A	12”	12”	Clearance above grade, veranda porch, deck or balcony.
B	12” Δ	9” Δ	Clearance to windows or doors that open.
C	12” *	12” *	Clearance to permanently closed windows.
D	18” **	18” **	Vertical clearance to ventilated soffits located above the terminal within a horizontal distance of 2’ from the center line of the terminal.
E	12” **	12” **	Clearance to unventilated soffit.
F	0”	0”	Clearance to an outside corner wall.
G	0” ***	0” ***	Clearance to an inside **non**-combustible corner wall or protruding **non**-combustible obstructions (chimney, etc.).
	2” ***	2” ***	Clearance to an inside combustible corner wall or protruding combustible obstructions (vent chase, etc.).
H	3’	3’ ****	Clearance to each side of the center line extended above the meter / regulator assembly to a maximum vertical distance of 15’.
I	3’	3’ ****	Clearance to a service regulator vent outlet.
J	12”	9”	Clearance to a non-mechanical air supply inlet to the building or a combustion air inlet to any other appliance.
K	6’	3’ †	Clearance to a mechanical air supply inlet.
L	7’ ‡	7’ ****	Clearance above a paved sidewalk or paved driveway located on public property.
M	12” ††	12” ****	Clearance under a veranda, porch or deck.
N	16”	16”	Clearance above the roof.
O	2’ †*	2’ †*	Clearance from an adjacent wall including neighbouring buildings.
P	8’	8’	Roof must be **non**-combustible without openings.
Q	3’	3’	See chart for wider wall dimensions.
R	6’	6’	See chart for deeper wall dimensions. The terminal shall not be installed on any wall that has an opening between the terminal and the open side of the structure.
S	12”	12”	Clearance under a covered balcony

Δ The terminal shall not be located less than 6 feet under a window that opens on a horizontal plane in a structure with three walls and a roof.

* Recommended to prevent condensation on windows and thermal breakage

** It is recommended to use a heat shield and to maximize the distance to vinyl clad soffits.

*** The periscope requires a minimum 18 inches clearance from an inside corner.

**** This is a recommended distance. For additional requirements check local codes.

† 3 feet above if within 10 feet horizontally.

‡ A vent shall not terminate where it may cause hazardous frost or ice accumulations on adjacent property surfaces.

†† Permitted only if the veranda, porch, or deck is fully open on a minimum of two sides beneath the floor.

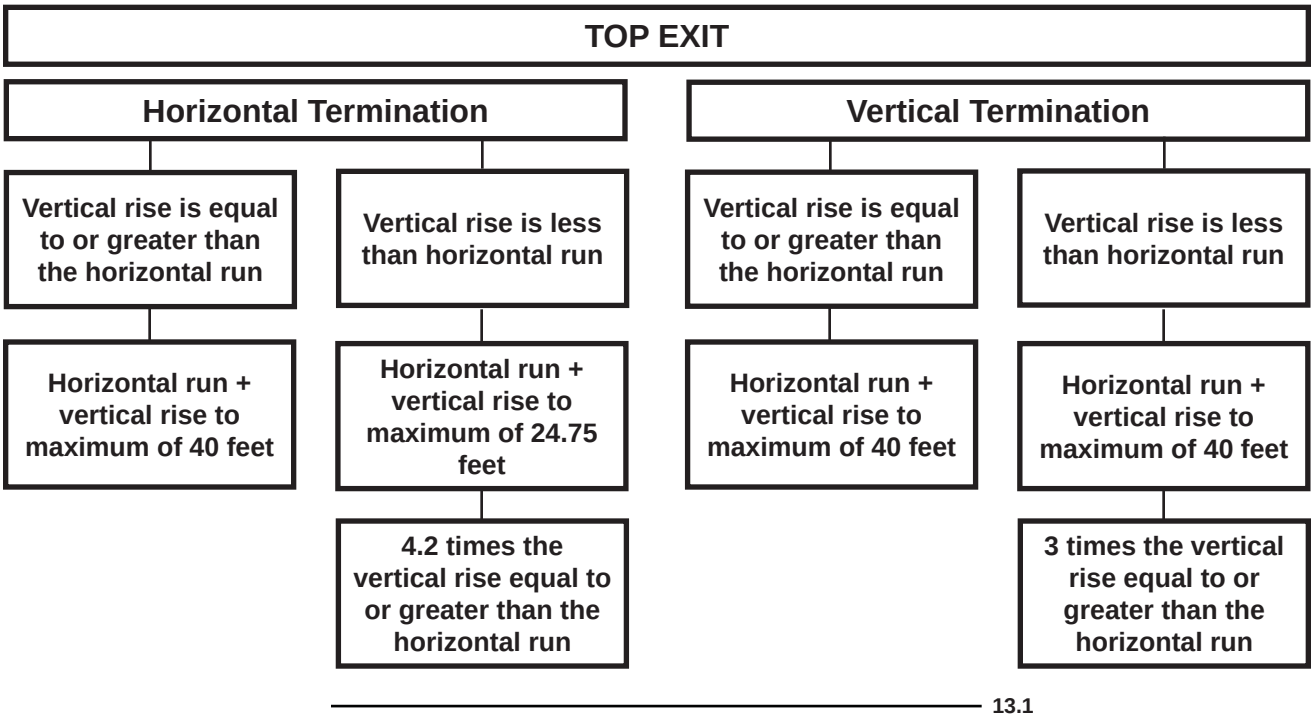
†* Recommended to prevent recirculation of exhaust products. For additional requirements check local codes.

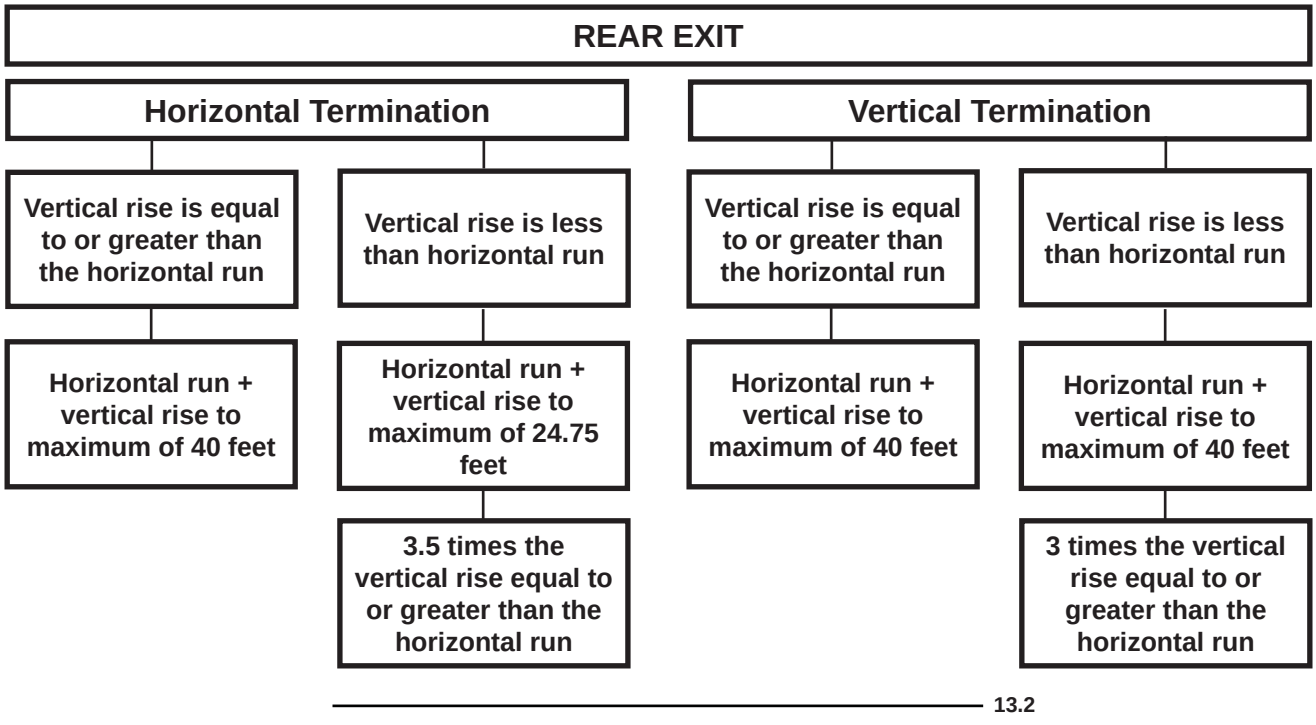
††* Permitted only if the balcony is fully open on a minimum of one side.

NOTE: Clearances are in accordance with local installation codes and the requirements of the gas supplier.

12.1C

3.5 VENTING APPLICATION FLOW CHART





3.6 DEFINITIONS

For the following symbols used in the venting calculations and examples are:
> - greater than
≥ - equal to or greater than
< - less than
≤ - equal to or less than
H_T - total of both horizontal vent lengths (Hr) and offsets (Ho) in feet
H_R - combined horizontal vent lengths in feet
H_O - offset factor: .03 (total degrees of offset - 90°*) in feet
V_T - combined vertical vent lengths in feet

14.1

3.7 ELBOW VENT LENGTH VALUES

	FEET	**INCHES**
1°	0.03	0.5
15°	0.45	6.0
30°	0.9	11.0
45°	1.35	16.0
90°*	2.7	32.0

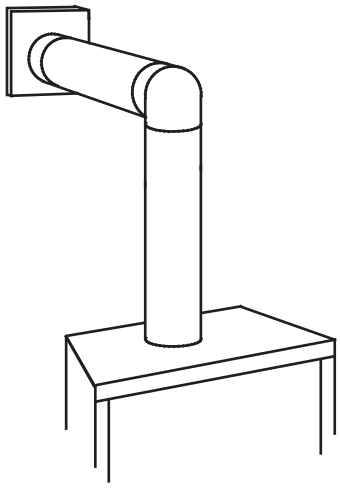
* The first 90° offset has a zero value and is shown in the formula as - 90°

15.1

3.8 TOP EXIT HORIZONTAL TERMINATION

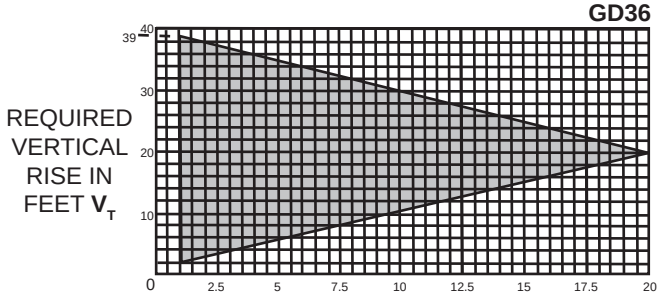
$(H_T) \leq (V_T)$

Simple venting configuration (only one 90° elbow)

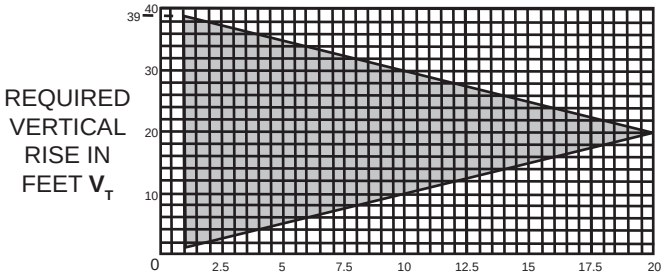


See graph to determine the required vertical rise V_T for the required horizontal run H_T.

GD36



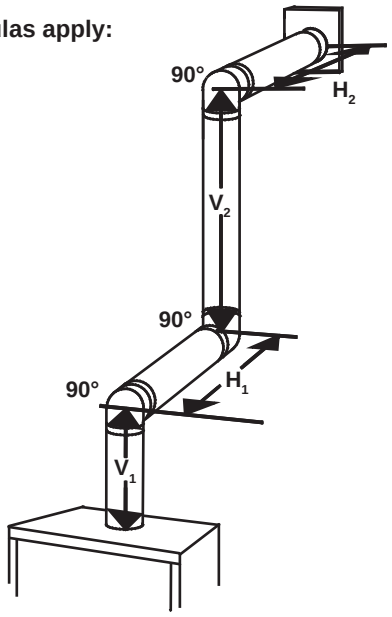
BGD36



The shaded area within the lines represents acceptable values for H_T and V_T

For vent configurations requiring more than one 90° elbow, the following formulas apply:

Formula 1: $H_T \leq V_T$
Formula 2: $H_T + V_T \leq 40$ feet



Example 1:
V_1 = 3 FT
V_2 = 8 FT
$V_T = V_1 + V_2 = 3 + 8 = 11$ FT
H_1 = 2.5 FT
H_2 = 2 FT
$H_R = H_1 + H_2 = 2.5 + 2 = 4.5$ FT
H_O = .03 (three 90° elbows - 90°) = .03 (270° - 90°) = 5.4 FT
$H_T = H_R + H_O = 4.5 + 5.4 = 9.9$ FT
$H_T + V_T = 9.9 + 11 = 20.9$ FT

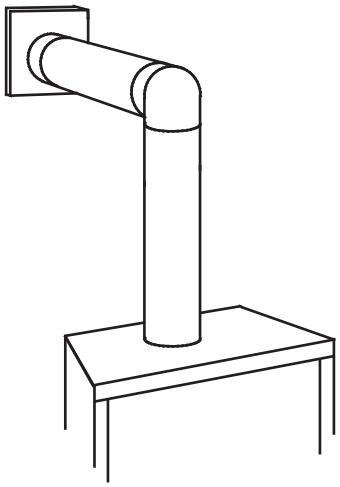
Formula 1: $H_T \leq V_T$
$9.9 \leq 11$
Formula 2: $H_T + V_T \leq$ **40 FT**
$20.9 \leq 40$

Since both formulas are met, this vent configuration is acceptable.

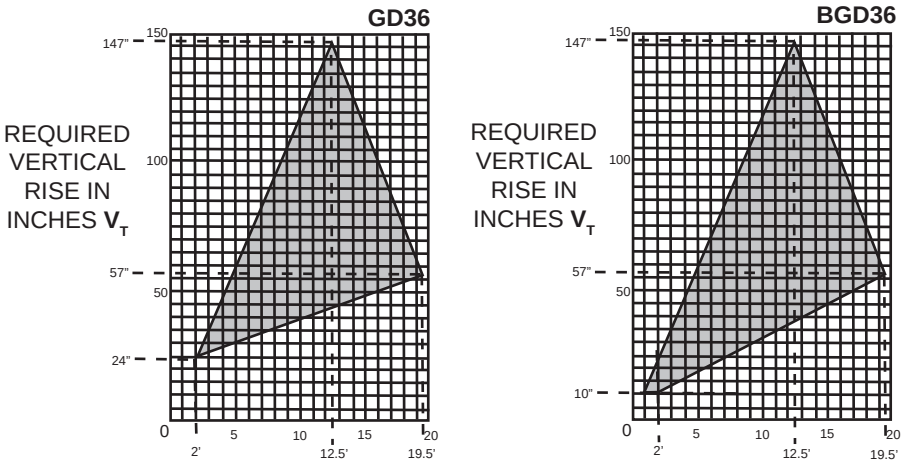
16.2A

$(H_T) > (V_T)$

Simple venting configuration (only one 90° elbow)



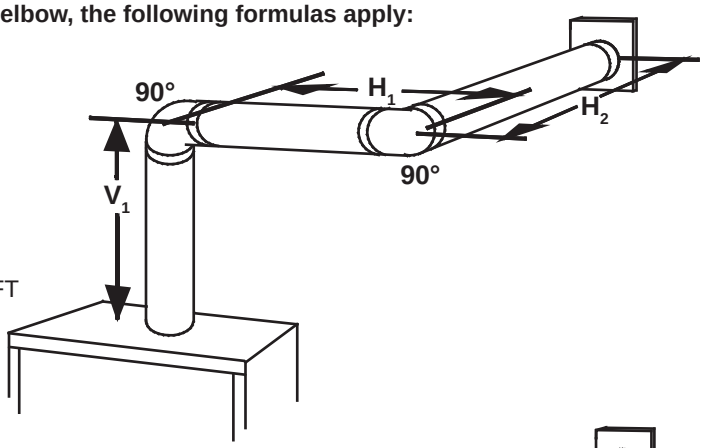
See graph to determine the required vertical rise V_T for the required horizontal run H_T.



The shaded area within the lines represents acceptable values for H_T and V_T.

For vent configurations requiring more than one 90° elbow, the following formulas apply:

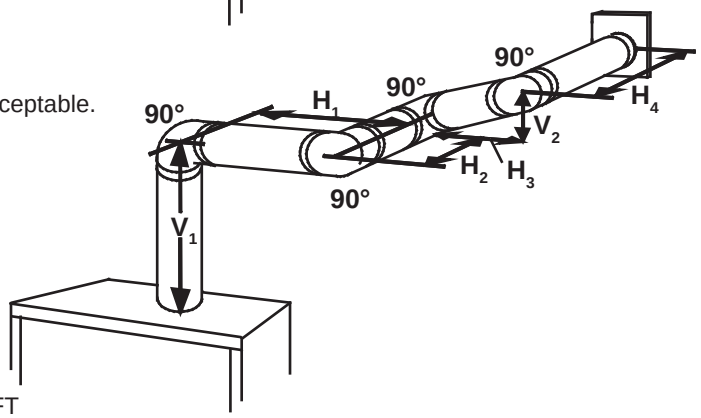
Formula 1: $H_T \leq 4.2\ V_T$
Formula 2: $H_T + V_T \leq 24.75$ feet



Example 2:
$V_1 = V_T = 6$ FT
$H_1 = 3$ FT
$H_2 = 5$ FT
$H_R = H_1 + H_2 = 3 + 5 = 8$ FT
$H_O = .03$ (two 90° elbows - 90°) = .03 (180° - 90°) = 2.7 FT
$H_T = H_R + H_O = 8 + 2.7 = 10.7$ FT
$H_T + V_T = 10.7 + 6 = 16.7$ FT

Formula 1: $H_T \leq 4.2\ V_T$
$4.2\ V_T = 4.2 \times 6 = 25.2$ FT
Formula 2: $H_T + V_T \leq 24.75$ FT
$16.7 \leq 24.75$

Since both formulas are met, this vent configuration is acceptable.



Example 3:
$V_1 = 4$ FT
$V_2 = 1.5$ FT
$V_T = V_1 + V_2 = 4 + 1.5 = 5.5$ FT
$H_1 = 2$ FT
$H_2 = 1$ FT
$H_3 = 1$ FT
$H_4 = 1.5$ FT
$H_R = H_1 + H_2 + H_3 + H_4 = 2 + 1 + 1 + 1.5 = 5.5$ FT
$H_O = .03$ (four 90° elbows - 90°) = .03 (360° - 90°) = 8.1 FT
$H_T = H_R + H_O = 5.5 + 8.1 = 13.6$ FT
$H_T + V_T = 13.6 + 5.5 = 19.1$ FT

Formula 1: $H_T \leq 4.2\ V_T$
$4.2\ V_T = 4.2 \times 5.5 = 23.1$ FT
$13.6 \leq 23.1$
Formula 2: $H_T + V_T \leq 24.75$ FT
$19.1 \leq 24.75$

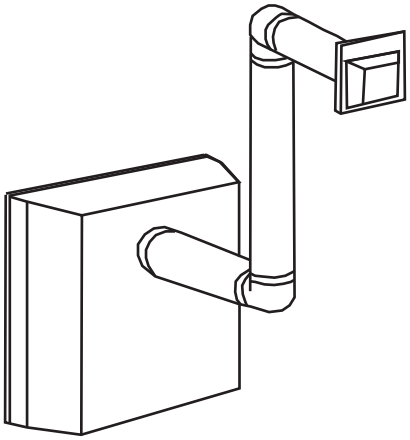
Since both formulas are met, this vent configuration is acceptable.

16.2_2A

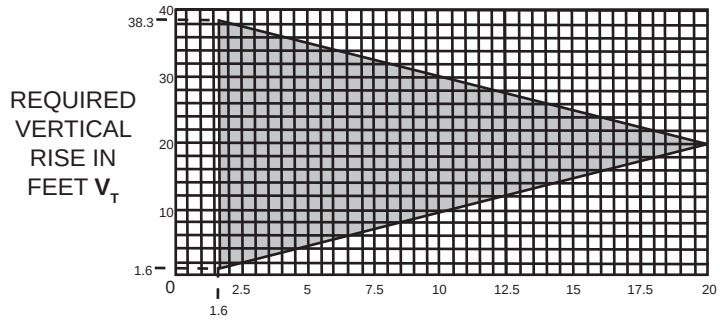
3.9 REAR EXIT HORIZONTAL TERMINATION

$(H_T) \leq (V_T)$

Simple venting configuration (only two 90° elbows)



See graph to determine the required vertical rise V_T for the required horizontal run H_T.



HORIZONTAL VENT RUN PLUS OFFSET IN FEET H_T

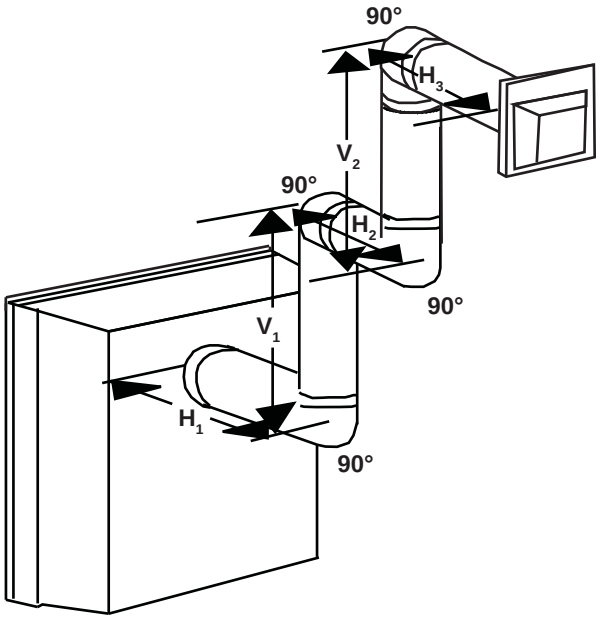
The shaded area within the lines represents acceptable values for H_T and H_T

For vent configurations requiring more than two 90° elbows, the following formulas apply:

Formula 1: $H_T \leq V_T$
Formula 2: $H_T + V_T \leq 40$ feet

Example:
V_1 = 9 FT
V_2 = 6 FT
$V_T = V_1 + V_2 = 9 + 6 = 15$ FT
H_1 = 3 FT
H_2 = 2 FT
H_3 = 1.5 FT
$H_R = H_1 + H_2 + H_3 = 3 + 2 + 1.5 = 6.5$ FT
H_O = .03 (four 90° elbows - 90°) = .03 (360° - 90°) = 8.1 FT
$H_T = H_R + H_O = 6.5 + 8.1 = 14.6$ FT
$H_T + V_T = 14.6 + 15 = 29.6$ FT

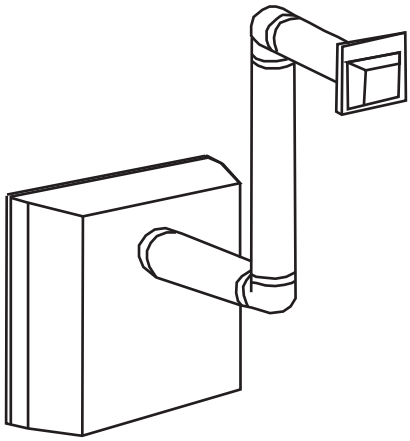
Formula 1: $H_T \leq V_T$
$14.6 \leq 15$
Formula 2: $H_T + V_T \leq$ **40 FT**
$29.6 \leq 40$
Since both formulas are met, this vent configuration is acceptable.



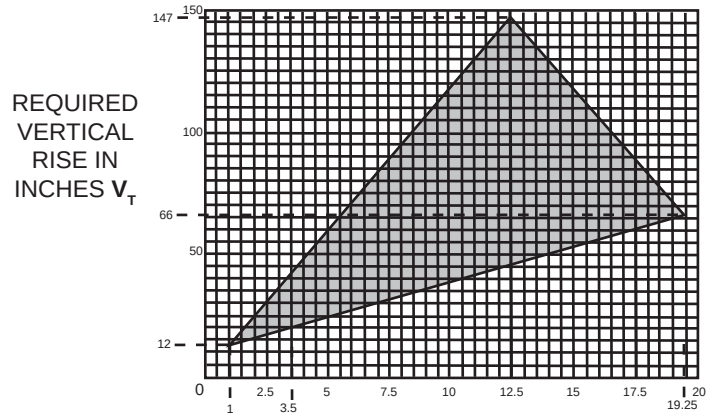
16.3

$(H_T) > (V_T)$

Simple venting configuration (only two 90° elbows)



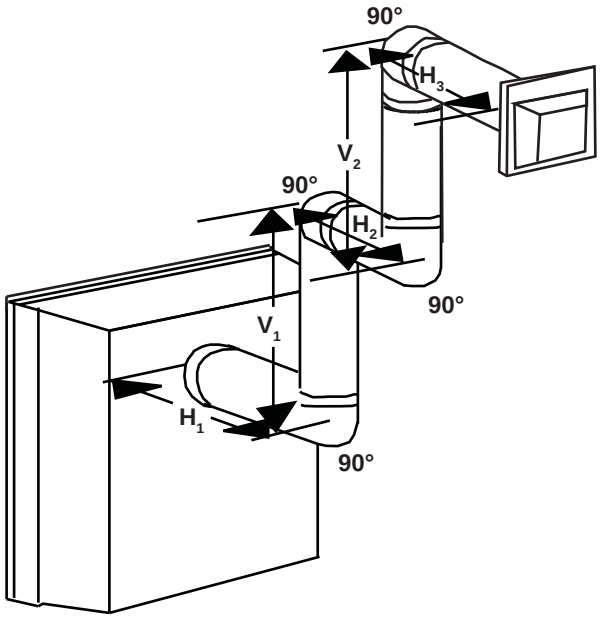
See graph to determine the required vertical rise $\mathbf{V_T}$ for the required horizontal run $\mathbf{H_T}$.



The shaded area within the lines represents acceptable values for $\mathbf{H_T}$ and $\mathbf{H_T}$

For vent configurations requiring more than two 90° elbows, the following formulas apply:

Formula 1: $H_T \leq 3.5V_T$
Formula 2: $H_T + V_T \leq 24.75$ feet



Example:
$\mathbf{V_1}$ = 4 FT
$\mathbf{V_2}$ = 1.5 FT
$\mathbf{V_T} = \mathbf{V_1} + \mathbf{V_2}$ = 4 + 1.5 = 5.5 FT
$\mathbf{H_1}$ = 2 FT
$\mathbf{H_2}$ = 1 FT
$\mathbf{H_3}$ = 1 FT
$\mathbf{H_4}$ = 1.5 FT
$\mathbf{H_R} = \mathbf{H_1} + \mathbf{H_2} + \mathbf{H_3} + \mathbf{H_4}$ = 2 + 1 + 1 + 1.5 = 5.5 FT
$\mathbf{H_O}$ = .03 (four 90° elbows + one 45° elbow - 90°)
= .03 (90 + 90 + 90 + 90 + 45 - 90) = 9.45 FT
$\mathbf{H_T} = \mathbf{H_R} + \mathbf{H_O}$ = 5.5 + 9.45 = 14.95 FT
$\mathbf{H_T} + \mathbf{V_T}$ = 14.95 + 5.5 = 20.45 FT

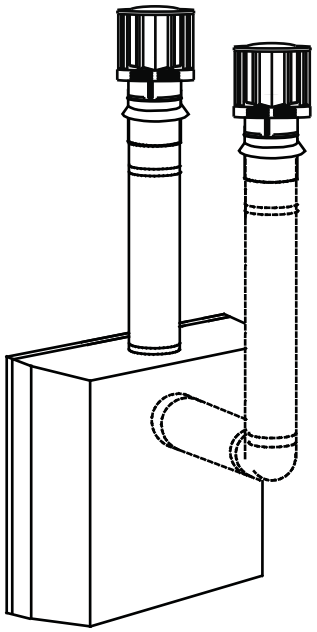
Formula 1: $\mathbf{H_T \leq 3.5V_T}$
$\mathbf{3.5V_T}$ = 3.5 x 5.5 = 19.25 FT
14.95 ≤ 19.25
Formula 2: $\mathbf{H_T + V_T \leq 24.75}$ **FT**
20.45 ≤ 24.75
Since both formulas are met, this vent configuration is acceptable.

16.3_2A

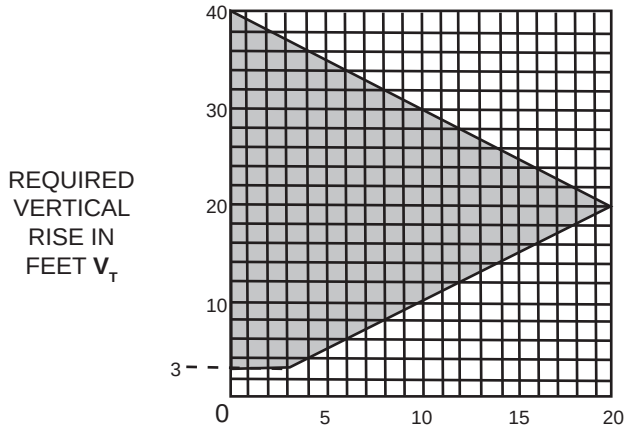
3.10 TOP OR REAR EXIT VERTICAL TERMINATION

$(H_T) \leq (V_T)$

Simple venting configurations.



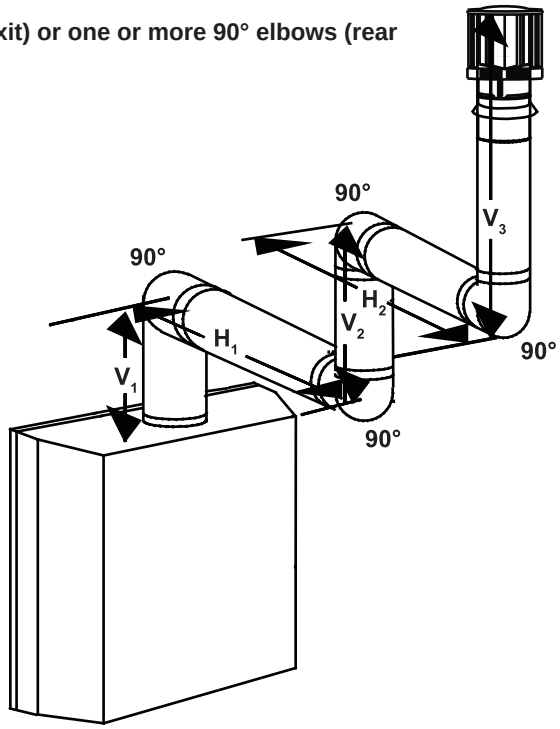
See graph to determine the required vertical rise $\mathbf{V_T}$ for the required horizontal run $\mathbf{H_T}$.



The shaded area within the lines represents acceptable values for $\mathbf{H_T}$ and $\mathbf{H_T}$

For vent configurations requiring one or more 90° elbows (top exit) or one or more 90° elbows (rear exit), the following formulas apply:

Formula 1: $H_T \leq V_T$
Formula 2: $H_T + V_T \leq 40$ feet



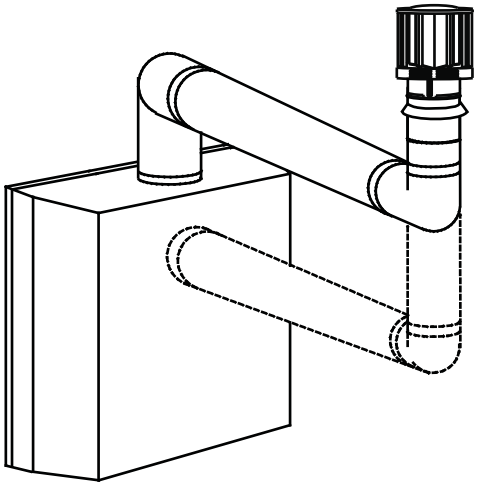
Example:
$\mathbf{V_1}$ = 5 FT
$\mathbf{V_2}$ = 6 FT
$\mathbf{V_3}$ = 10 FT
$\mathbf{V_T} = \mathbf{V_1} + \mathbf{V_2} + \mathbf{V_3} = 5 + 6 + 10 = 21$ FT
$\mathbf{H_1}$ = 8 FT
$\mathbf{H_2}$ = 2.5 FT
$\mathbf{H_R} = \mathbf{H_1} + \mathbf{H_2} = 8 + 2.5 = 10.5$ FT
$\mathbf{H_O}$ = .03 (four 90° elbows - 90°)
= .03 (360° - 90°) = 8.1 FT
$\mathbf{H_T} = \mathbf{H_R} + \mathbf{H_O} = 10.5 + 8.1 = 18.6$ FT
$\mathbf{H_T} + \mathbf{V_T} = 18.6 + 21 = 39.6$ FT

Formula 1: $\mathbf{H_T \leq 3.5\ V_T}$
$18.6 \leq 21$
Formula 2: $\mathbf{H_T + V_T \leq 40}$ **FT**
$39.6 \leq 40$

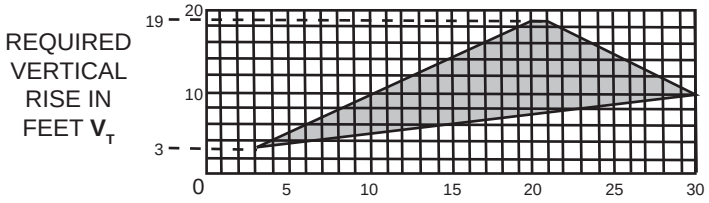
Since both formulas are met, this vent configuration is acceptable.

$(H_T) > (V_T)$

Simple venting configurations.



See graph to determine the required vertical rise V_T for the required horizontal run H_T.

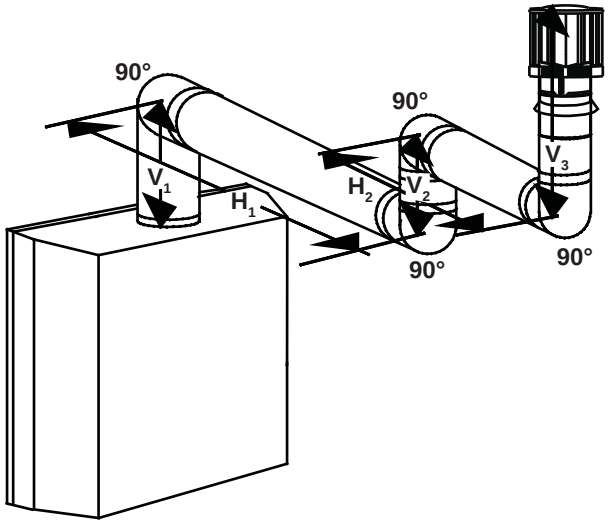


HORIZONTAL VENT RUN PLUS OFFSET IN FEET H_T

The shaded area within the lines represents acceptable values for H_T and H_T

For vent configurations requiring more than two 90° elbows (top exit) or one 90° elbow (rear exit), the following formulas apply:

Formula 1: $H_T \leq 3\ V_T$
Formula 2: $H_T + V_T \leq 40$ feet



Example:
V_1 = 2 FT
V_2 = 1 FT
V_3 = 1.5 FT
$V_T = V_1 + V_2 + V_3 = 2 + 1 + 1.5 = 4.5$ FT
H_1 = 6 FT
H_2 = 2 FT
$H_R = H_1 + H_2 = 6 + 2 = 8$ FT
H_O = .03 (four 90° elbows - 90°)
= .03 (360° - 90°) = 8.1 FT
$H_T = H_R + H_O = 8 + 8.1 = 16.1$ FT
$H_T + V_T = 16.1 + 4.5 = 20.6$ FT

Formula 1: $H_T \leq 3.5\ V_T$
$3.5\ V_T = 3 \times 4.5 = 13.5$ FT
$16.1 \leq 13.5$

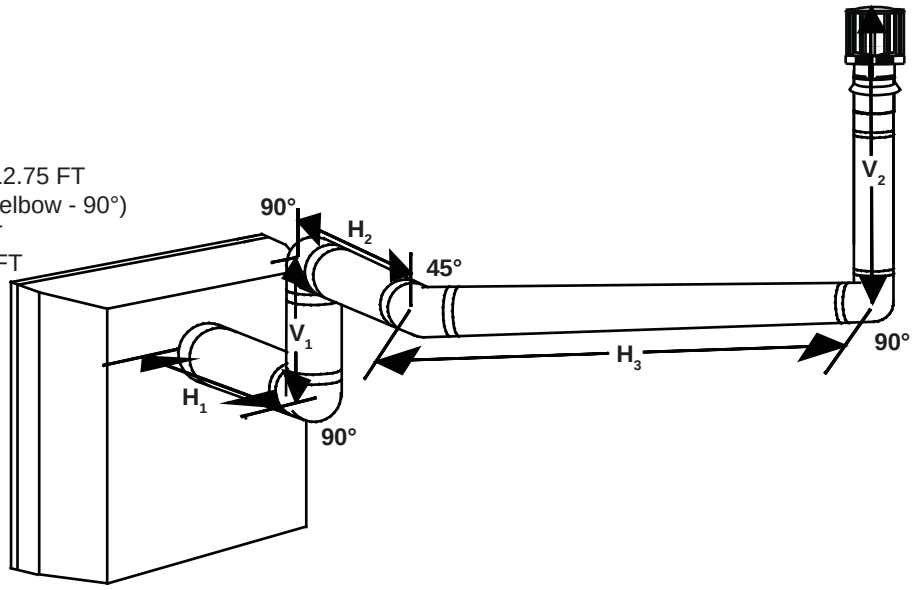
Since this formula is not met, this vent configuration is **<u>un</u>acceptable.**

Formula 2: $H_T + V_T \leq 40$ FT
$16.1 \leq 13.5$

Since only formula 2 is met, this vent configuration is unacceptable and a new fireplace location or vent configuration will need to be established to satisfy both formulas.

18.2_2A

Example:
V_1 = 1.5 FT
V_2 = 5 FT
$V_T = V_1 + V_2 = 1.5 + 1 + 5 = 6.5$ FT
H_1 = 1 FT
H_2 = 1 FT
H_3 = 10.75 FT
$H_R = H_1 + H_2 + H_3 = 1 + 1 + 10.75 = 12.75$ FT
H_O = .03 (four 90° elbows + one 45° elbow - 90°)
= .03 (360° + 45° - 90°) = 6.75 FT
$H_T = H_R + H_O = 12.75 + 6.75 = 19.5$ FT
$H_T + V_T = 19.5 + 6.5 = 26$ FT



Formula 1:
$H_T \leq 3\ V_T$
$3\ V_T = 3 \times 6.5 = 19.5$ FT
19.5 = 19.5

Formula 2:
$H_T + V_T \leq 40$ FT
26 ≤ 40

Since both formulas are met, this vent configuration is acceptable.

18.2_3

4.0 PRE-INSTALLATION PREPARATION

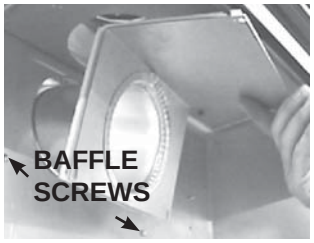
⚠ WARNING

FAILURE TO INSTALL THE CAP WILL CAUSE THE APPLIANCE TO FUNCTION IMPROPERLY AND CAN CAUSE INJURY OR PROPERTY DAMAGE.

4.1 GD36 REAR EXIT

A. Remove the baffle from the back of the firebox by removing the four screws.

B. From inside the firebox, insert the 4" flue pipe / gasket assembly (provided) through the rear of the firebox. Secure the flue pipe assembly to the rear and top of the appliance using 4 #8 x ¾ inch Hex Head Wildrill screws supplied. **NOTE: Do not overtighten. The gasket needs only to be snug against the firebox.**



C. Before attaching elbows to the collars on the back of the appliance, 1½" will need to be trimmed off the 4" collar.

D. Re-attach the baffle to the back of the firebox using the four screws.

4.2 GD36 TOP EXIT

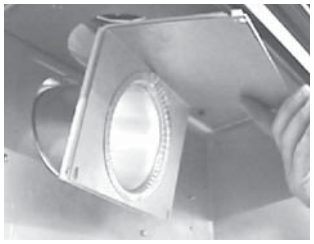
Remove the baffle from the back of the firebox by removing the four screws.

A. Remove the 7" diameter cap from the top of the appliance and re-secure it over the 7" collar located at the rear of the appliance. Press firmly on the cap while securing to ensure an airtight seal. Do not damage the gasket.

B. Remove the plate covering the 4" diameter flue opening (seen inside the top of the 7" diameter collar) and discard. Try not to disturb the retaining ring or the gasket beneath. Re-secure the ring and gasket using the screws removed from the plate.

C. From inside the firebox, insert the 4" flue pipe / gasket assembly through the heat shield and out through the retaining ring. Secure the assembly to the rear and top of the appliance using 4 #8 x ¾" Hex Head Wildrill screws supplied. Do not overtighten. The gasket needs only to be snug against the firebox. Re-attach the baffle to the back of the firebox using the four screws.

4.3 BGD36 REAR EXIT



From inside the firebox, insert the 4" flue pipe / gasket assembly (provided) through the rear of the firebox. Secure the gasket assembly to the rear and top of the appliance using 4 #8 x ¾ inch Hex Head Wildrill screws supplied.

Do not overtighten. The gasket needs only to be snug against the firebox. Before attaching elbows to the collars on the back of the appliance, 1½" will need to be trimmed off the 4" collar.

4.4 BGD36 TOP VENT

A. Remove the 7" diameter cap from the top of the appliance and re-secure it over the 7" collar located at the rear of the appliance. Press firmly on the cap while securing to ensure an airtight seal. Do not damage the gasket.

B. Remove the plate covering the 4" diameter flue opening (seen inside the top of the 7" diameter collar) and discard. Try not to disturb the retaining ring or the gasket beneath. Re-secure the ring and gasket using the screws removed from the plate.

C. From inside the firebox, insert the 4" flue pipe / gasket assembly through the heat shield and out through the retaining ring. Secure the assembly to the rear and top of the appliance using 4 #8 x ¾" Hex Head Wildrill screws supplied. Do not overtighten. The gasket needs only to be snug against the firebox.

5.0 INSTALLATION

⚠ WARNING

FOR SAFE AND PROPER OPERATION OF THE APPLIANCE, FOLLOW THE VENTING INSTRUCTIONS EXACTLY.

ALL INNER EXHAUST AND OUTER INTAKE VENT PIPE JOINTS MAY BE SEALED USING EITHER RED RTV HIGH TEMP SILICONE SEALANT W573-0002 (NOT SUPPLIED) OR BLACK HIGH TEMP MILL PAC W573-0007 (NOT SUPPLIED) WITH THE EXCEPTION OF THE APPLIANCE EXHAUST FLUE COLLAR WHICH MUST BE SEALED USING MILL PAC.

IF USING PIPE CLAMPS TO CONNECT VENT COMPONENTS, 3 SCREWS MUST ALSO BE USED TO ENSURE THE CONNECTION CANNOT SLIP OFF.

DO NOT CLAMP THE FLEXIBLE VENT PIPE.

RISK OF FIRE, EXPLOSION OR ASPHYXIATION. IMPROPER SUPPORT OF THE ENTIRE VENTING SYSTEM MAY ALLOW VENT TO SAG AND SEPARATE. USE VENT RUN SUPPORTS AND CONNECT VENT SECTIONS PER INSTALLATION INSTRUCTIONS.

RISK OF FIRE, DO NOT ALLOW LOOSE MATERIALS OR INSULATION TO TOUCH THE VENT PIPE. REMOVE INSULATION TO ALLOW FOR THE INSTALLATION OF THE ATTIC SHIELD AND TO MAINTAIN CLEARANCES TO COMBUSTIBLES.

68.2A

5.1 WALL AND CEILING PROTECTION

⚠ WARNING

DO NOT FILL THE SPACE BETWEEN THE VENT PIPE AND ENCLOSURE WITH ANY TYPE OF MATERIAL. DO NOT PACK INSULATION OR COMBUSTIBLES BETWEEN CEILING FIRESTOPS. ALWAYS MAINTAIN SPECIFIED CLEARANCES AROUND VENTING AND FIRESTOP SYSTEMS. INSTALL WALL SHIELDS AND FIRESTOPS AS SPECIFIED. FAILURE TO KEEP INSULATION OR OTHER MATERIALS AWAY FROM VENT PIPE MAY CAUSE FIRE.

70.1

For clearances to combustible materials from the vent pipe, see “FRAMING” section.

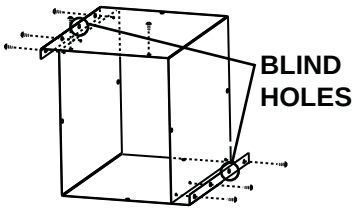
5.1.1 GD36 HORIZONTAL INSTALLATION

⚠ WARNING

THE FIRESTOP ASSEMBLY MUST BE INSTALLED WITH THE VENT SHIELD TO THE TOP.

TERMINALS MUST NOT BE RECESSED INTO A WALL OR SIDING MORE THAN THE DEPTH OF THE RETURN FLANGE OF THE MOUNTING PLATE.

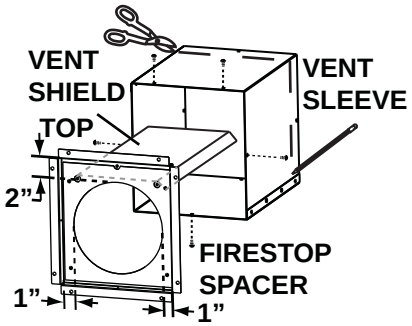
A. Assemble the two halves of the vent sleeve by aligning the holes that come together to make a rectangular shape (lip to the outside). Secure using 6 of the screws supplied in the manual baggie.
NOTE: Screws not required in two blind holes.



B. Fit the firestop spacer into one end of the vent sleeve and secure through the aligned holes on the top, bottom, and sides with the remaining 5 screws supplied.

If flexible venting is to be used remove the rigid firestop spacer. The remaining hole is sized for flexible venting.

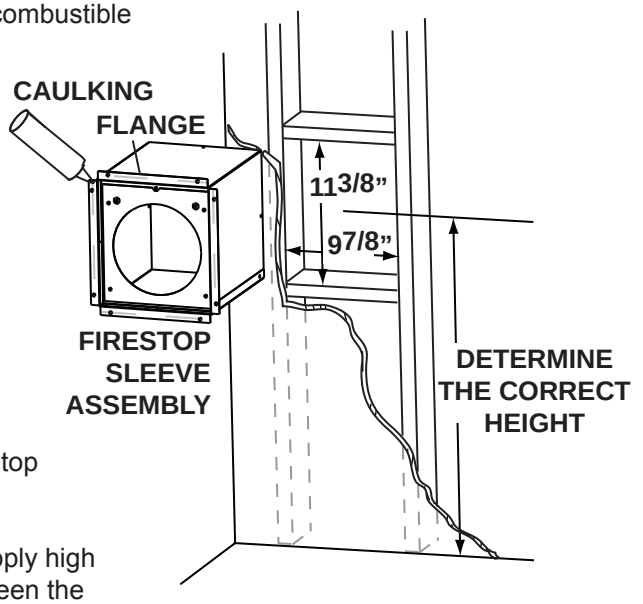
This application occurs when venting through an exterior wall. Having determined the air terminal location, cut and frame a hole in the exterior wall 9 7/8” wide by 11 3/8” high to accommodate the firestop sleeve assembly.



The length of the vent shield may be cut shorter for combustible walls that are less than 8 1/2” thick but the vent shield must extend the full depth of the combustible wall.

C. Insert the firestop sleeve assembly into the wall, mark the wall depth and trim the vent sleeve to suit. The screws that secure the vent sleeve may need to be repositioned to ensure a rigid assembly is maintained.

D. Apply a bead of caulking (not supplied) to the inside surface of the firestop flange and secure the assembly to the wall. (Ensure that the rectangular shaped assembly is installed to maintain 2” from the top of the vent).



E. Once the vent pipe is installed in it’s final position, apply high temperature sealant W573-0002 (not supplied) between the pipe and the firestop.

5.1.2 BGD36 HORIZONTAL INSTALLATION

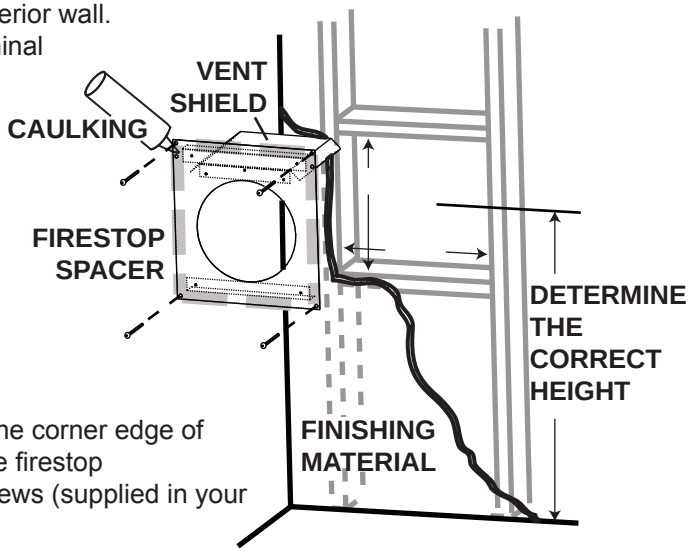
⚠ WARNING

THE FIRESTOP ASSEMBLY MUST BE INSTALLED WITH THE VENT SHIELD TO THE TOP.

TERMINALS MUST NOT BE RECESSED INTO A WALL OR SIDING MORE THAN THE DEPTH OF THE RETURN FLANGE OF THE MOUNTING PLATE.

This application occurs when venting through an exterior wall. Having determined the correct height for the air terminal location, cut and frame a hole in the exterior wall as illustrated to accommodate the firestop assembly. Dry fit the firestop assembly before proceeding to ensure the brackets on the rear surface fit to the inside surface of the horizontal framing.

The length of the vent shield may be cut shorter for combustible walls that are less than 8 1/2" thick but the vent shield must extend the full depth of the combustible wall.



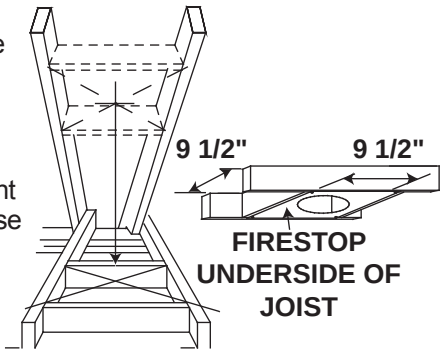
A. Apply a bead of caulking (not supplied) around the corner edge of the inside surface of the firestop assembly, fit the firestop assembly to the hole and secure using the 4 screws (supplied in your manual baggie).

B. Once the vent pipe is installed in its final position, apply high temperature sealant W573-0007 (not supplied) between the pipe and the firestop.

20.2

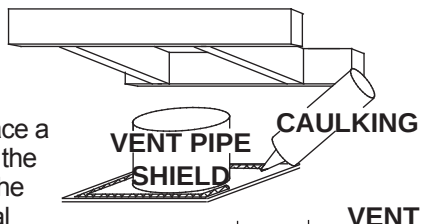
5.1.3 VERTICAL INSTALLATION

This application occurs when venting through a roof. Installation kits for various roof pitches are available from your authorized dealer / distributor. See accessories to order specific kits required.

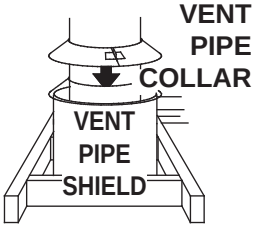


A. Determine the air terminal location, cut and frame a square opening as illustrated in the ceiling and the roof to provide the minimum 1" clearance between the vent pipe and any combustible material. Try to center the vent pipe location midway between two joists to prevent having to cut them. Use a plumb bob to line up the center of the openings. A vent pipe shield will prevent any materials such as insulation, from filling up the 1" air space around the pipe. Nail headers between the joist for extra support.

B. Apply a bead of caulking (not supplied) to the framework or to the Wolf Steel vent pipe shield plate or equivalent (in the case of a finished ceiling), and secure over the opening in the ceiling. A firestop must be placed on the bottom of each framed opening in a roof or ceiling that the venting system passes through. Apply a bead of caulking all around and place a firestop spacer over the vent shield to restrict cold air from being drawn into the room or around the fireplace. Ensure that both spacer and shield maintain the required clearance to combustibles. Once the vent pipe is installed in its final position, apply sealant between the pipe and the firestop assembly.



C. In the attic, slide the vent pipe collar down to cover up the open end of the shield and tighten. This will prevent any materials, such as insulation, from filling up the 1" air space around the pipe.



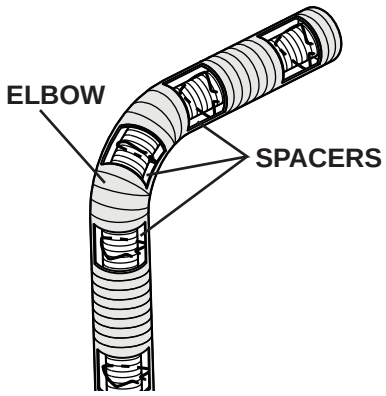
21.1

5.2 USING FLEXIBLE VENT COMPONENTS

⚠ WARNING

DO NOT ALLOW THE INNER FLEX PIPE TO BUNCH UP ON HORIZONTAL OR VERTICAL RUNS AND ELBOWS. KEEP IT PULLED TIGHT.

SPACERS ARE ATTACHED TO THE INNER FLEX PIPE AT PREDETERMINED INTERVALS TO MAINTAIN AN EVEN AIR GAP TO THE OUTER FLEX PIPE. THIS GAP IS REQUIRED FOR SAFE OPERATION. A SPACER IS REQUIRED AT THE START, MIDDLE AND END OF EACH ELBOW TO ENSURE THIS GAP IS MAINTAINED. THESE SPACERS MUST NOT BE REMOVED.



For safe and proper operation of the appliance, follow the venting instructions exactly.
All inner flex pipe and outer flex pipe joints may be sealed using high temperature sealant W573-0002 (not supplied) or the high temperature sealant W573-0007 Mill Pac (not supplied). However, the high temperature sealant W573-0007 Mill Pac (not supplied) must be used on the joint connecting the inner flex pipe and the exhaust flue collar.
Use only approved flexible vent pipe kits marked:

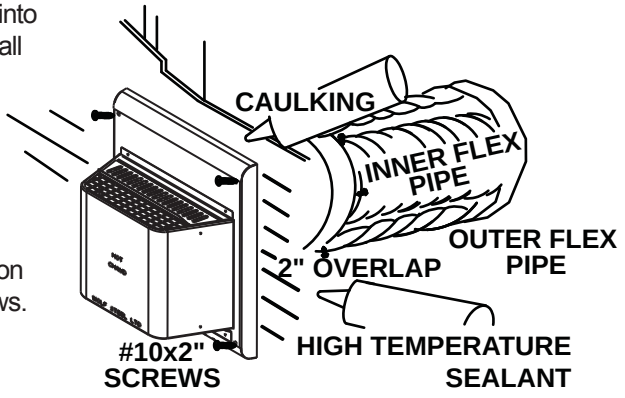
"Wolf Steel Approved Venting" as identified by the stamp only on the outer flex pipe.

22.1

5.2.1 HORIZONTAL AIR TERMINAL INSTALLATION

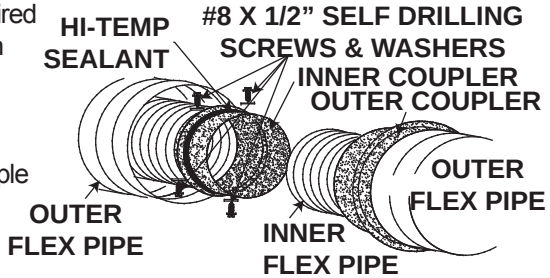
A. Stretch the inner flex pipe to the required length taking into account the additional length needed for the finished wall surface. Apply a heavy bead of the high temperature sealant W573-0007 Mill Pac (not supplied) to the inner sleeve of the air terminal. Slip the vent pipe a minimum of 2" over the inner sleeve of the air terminal and secure with 3 #8 screws.

B. Using the outer flex pipe, slide over the outer combustion air sleeve of the air terminal and secure with 3 #8 screws. Seal using high temperature sealant W573-0002 (not supplied).



C. Insert the vent pipes through the firestop maintaining the required clearance to combustibles. Holding the air terminal (lettering in an upright, readable position), secure to the exterior wall and make weather tight by sealing with caulking (not supplied).

D. If more vent pipe needs to be used to reach the fireplace, couple them together as illustrated. The vent system must be supported approximately every 3 feet for both vertical and horizontal runs. Use noncombustible strapping to maintain the minimum clearance to combustibles.



The air terminal mounting plate may be recessed into the exterior wall or siding no greater than the depth of its return flange.

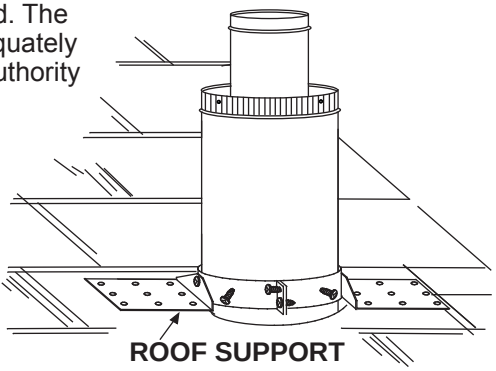
23.1A

5.2.2 VERTICAL AIR TERMINAL INSTALLATION

⚠ WARNING

MAINTAIN A MINIMUM 2” SPACE BETWEEN THE AIR INLET BASE AND THE STORM COLLAR.

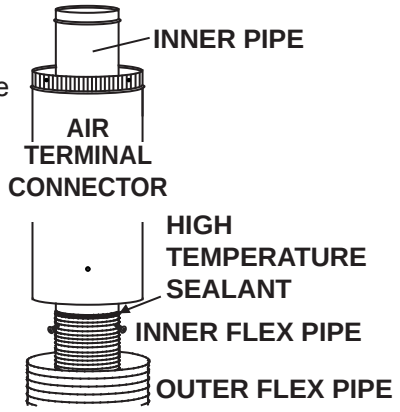
A. Fasten the roof support to the roof using the screws provided. The roof support is optional. In this case the venting is to be adequately supported using either an alternate method suitable to the authority having jurisdiction or the optional roof support.



B. Stretch the inner flex pipe to the required length. Slip the inner flex pipe a minimum of 2” over the inner pipe of the air terminal connector and secure with 3 #8 screws. Seal using a heavy bead of high temperature sealant W573-0007 (not supplied).

C. Repeat using the outer flex pipe, using a heavy bead of high temperature sealant W573-0002 (not supplied).

D. Thread the air terminal connector / vent pipe assembly down through the roof. The air terminal must be positioned vertically and plumb. Attach the air terminal connector to the roof support, ensuring that the top of the air terminal is 16” above the highest point that it penetrates the roof.

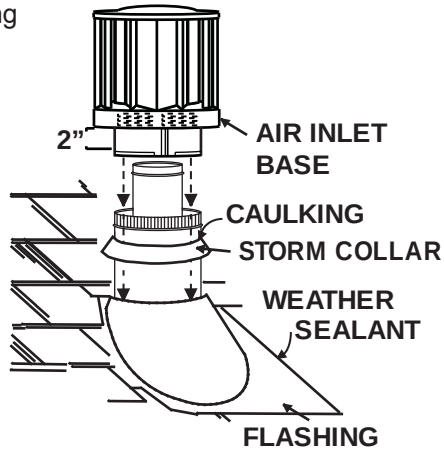


E. Remove nails from the shingles, above and to the sides of the air terminal connector. Place the flashing over the air terminal connector leaving a min. 3/4” of the air terminal connector showing above the top of the flashing. Slide the flashing underneath the sides and upper edge of the shingles. Ensure that the air terminal connector is properly centred within the flashing, giving a 3/4” margin all around. Fasten to the roof. Do not nail through the lower portion of the flashing. Make weather-tight by sealing with caulking. Where possible, cover the sides and top edges of the flashing with roofing material.

F. Aligning the seams of the terminal and air terminal connector, place the terminal over the air terminal connector making sure the vent pipe goes into the hole in the terminal. Secure with the three screws provided.

G. Apply a heavy bead of weatherproof caulking 2” above the flashing. Install the storm collar around the air terminal and slide down to the caulking. Tighten to ensure that a weather-tight seal between the air terminal and the collar is achieved.

H. If more vent pipe needs to be used to reach the appliance see “HORIZONTAL AIR TERMINAL INSTALLATION” section.

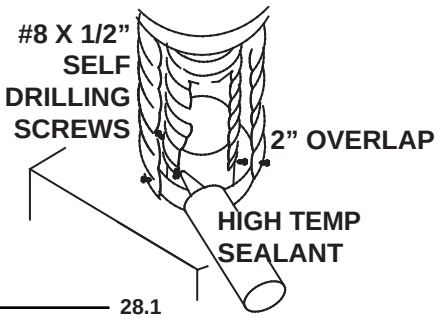


24.1

5.2.3 APPLIANCE VENT CONNECTION

A. Install the inner flex pipe to the appliance. Secure with 3 screws and flat washers. Seal the joint and screw holes using the high temperature sealant W573-0007 (not supplied).

B. Install the outer flex pipe to the appliance. Attach and seal the joints using the high temperature sealant W573-0002 (not supplied).



28.1

5.3 USING RIGID VENT COMPONENTS

The vent system must be supported approximately every 3 feet for both vertical and horizontal runs. Use Wolf Steel Ltd. support ring assembly or equivalent noncombustible strapping to maintain the minimum clearance to combustibles for both vertical and horizontal runs.

All inner exhaust and outer intake vent pipe joints may be sealed using either red high temperature silicone sealant W573-0002 (not supplied) or black high temperature sealant W573-0007 Mill Pac (not supplied) with the exception of the appliance exhaust flue collar which must be sealed using Mill Pac.

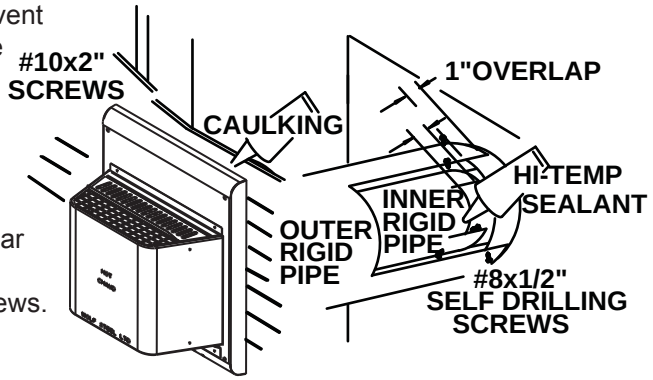
25.1

5.3.1 HORIZONTAL AIR TERMINAL INSTALLATION

⚠ WARNING

RISK OF FIRE, DO NOT ALLOW LOOSE MATERIALS OR INSULATION TO TOUCH THE VENT PIPE. REMOVE INSULATION TO ALLOW FOR THE INSTALLATION OF THE ATTIC SHIELD AND TO MAINTAIN CLEARANCES TO COMBUSTIBLES.

A. Move the appliance into position. Measure the vent length required between terminal and appliance taking into account the additional length needed for the finished wall surface and any 1¼” overlaps between venting components.



B. Apply high temperature sealant W573-0007 (not supplied) to the outer edge of the inner collar of the appliance. Attach the first inner rigid pipe component and secure using 3 self tapping screws. Repeat using the outer rigid pipe.

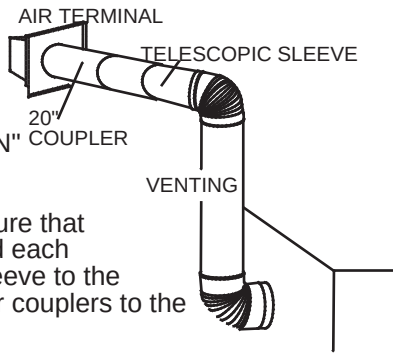
C. Insert the vent pipes through the firestop maintaining the required clearance to combustibles. Holding the air terminal (lettering in an upright, readable position), secure to the exterior wall and make weather tight by sealing with caulking (not supplied).

The air terminal mounting plate may be recessed into the exterior wall or siding no greater than the depth of the return flange.

26.1

5.3.2 EXTENDED HORIZONTAL AND CORNER TERMINAL INSTALLATION

A 45° corner installation can have 0” rise between the appliance combustion air collar and the air terminal. In this case, vent lengths must be kept to a maximum of 24”. For longer vent lengths, a minimum vertical rise of 24” is required.



A. Follow the instructions for "HORIZONTAL AIR TERMINAL INSTALLATION" section.

B. Continue adding components alternating inner and outer vent pipes. Ensure that all inner vent pipes and elbows have sufficient vent spacers attached and each component is securely fastened to the one prior. Attach the telescopic sleeve to the vent run. Secure and seal. To facilitate completion, attach inner and outer couplers to the air terminal.

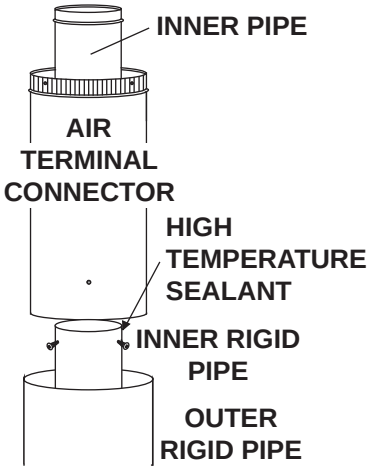
C. Install the air terminal. See “HORIZONTAL AIR TERMINAL INSTALLATION” section. Extend the outer telescopic sleeve; connect to the air terminal assembly. Fasten with self tapping screws and seal.

48.2

5.3.3 VERTICAL AIR TERMINAL INSTALLATION

NOTE: Before attaching elbows to the collars on the back of the appliance, 1 1/2" will need to be trimmed off the 4" collar.

REAR VENT APPLICATION: Attach 4" and 7" elbows to the appliance. Secure with 3 screws and seal the joints and screw heads using high temperature sealant. Proceed to step A below.



TOP VENT APPLICATION:

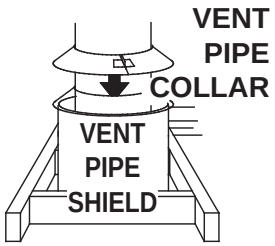
A. Move the appliance into position.

B. Fasten the roof support to the roof using the screws provided. The roof support is optional. In this case the venting is to be adequately supported using either an alternate method suitable to the authority having jurisdiction or the optional roof support.

C. Apply high temperature sealant W573-0007 (not supplied) to the outer edge of the inner sleeve of the air terminal. Slip the inner coupler a minimum of 2" over the sleeve and secure using 3 screws.

D. Apply high temperature sealant W573-0002 (not supplied) to the outer edge of the of the outside sleeve of the air terminal connector. Slip the outer coupler over the sleeve and secure as before. Trim the outer coupler even with the inner coupler end.

E. Thread the air terminal connector / vent pipe assembly down through the roof support and attach, ensuring that a minimum 16" of air terminal connector will penetrate the roof when fastened. If the attic space is tight, we recommend threading the Wolf Steel vent pipe collar or equivalent loosely onto the air terminal connector / vent pipe assembly as it is passed through the attic. The air terminal connector must be positioned vertically and plumb.



F. Remove nails from the shingles, above and to the sides of the air terminal connector. Place the flashing over the air terminal connector and slide it underneath the sides and upper edge of the shingles. Ensure that the air terminal connector is properly centered within the flashing, giving a 3/4" margin all around. Fasten to the roof. **Do NOT nail through the lower portion of the flashing.** Make weather-tight by sealing with caulking. Where possible, cover the sides and top edges of the flashing with roofing material.

G. Apply a heavy bead of waterproof caulking 2" above the flashing. Install the storm collar around the air terminal and slide down to the caulking. Tighten to ensure that a weather-tight seal between the air terminal connector and the collar is achieved.

H. Continue adding rigid venting sections, sealing and securing as above. Attach the inner collapsed telescopic sleeve to the last section of rigid piping. Secure with screws and seal. Repeat using the outer telescopic sleeve.

REAR VENT APPLICATION:

I. Run a bead of high temperature sealant W573-0007 (not supplied) around the outside of the inner elbow. Pull the telescopic sleeve a minimum of 2" onto the elbow. Secure with 3 screws. Repeat with the outer telescopic sleeve.

TOP VENT APPLICATION:

J. Run a bead of high temperature sealant W573-0007 (not supplied) around the outside of the inner collar on the appliance. Pull the telescopic sleeve a minimum of 2" onto the collar. Secure with 3 screws. Repeat with the outer telescopic sleeve.

K. In the attic, slide the vent pipe collar down to cover up the open end of the shield and tighten. This will prevent any materials, such as insulation, from filling up the 1" air space around the pipe

27.1

5.3.4 GD36 RESTRICTING VERTICAL VENTS

Vertical terminations running longer than 15 feet may display a very active flame. If this appearance is not desirable, the vent exit must be restricted using restrictor plate kit, RP-KT.

This reduces the velocity of the exhaust gasses, slowing down the flame pattern and creating a more traditional appearance. Specific instructions are included with the kit.

5.4 VERTICAL THROUGH EXISTING CHIMNEY

⚠ WARNING

RISK OF FIRE!

CO-AXIAL TO CO-LINEAR VENTING CONFIGURATIONS MUST ONLY BE USED IN A NON-COMBUSTIBLE CHIMNEY OR ENCLOSURE. INSTALLATION IN A COMBUSTIBLE ENCLOSURE COULD RESULT IN A FIRE.

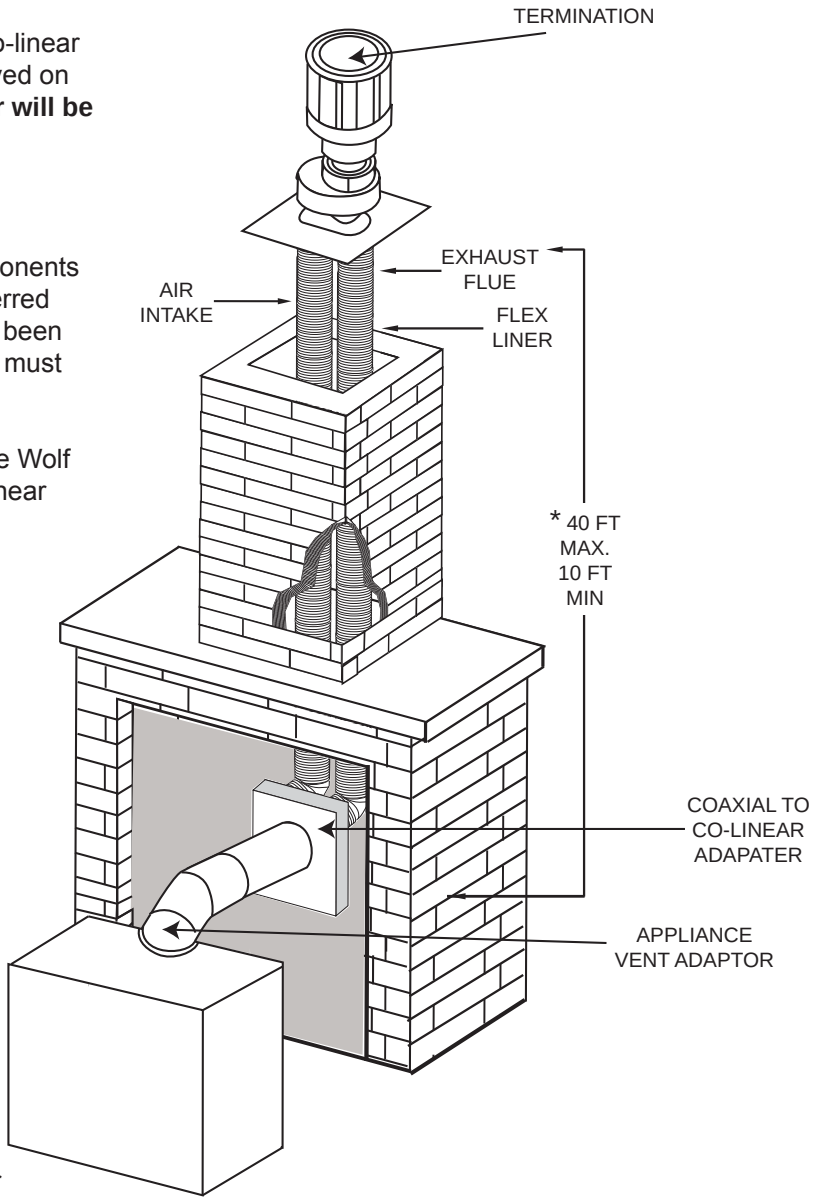
This appliance is designed to be attached to a 3” co-linear aluminum flex vent system running the full length of a masonry chimney.

The flex liners accommodate any contours of a masonry chimney, however, it is necessary to keep the flexible liners as straight as possible. The inlet air collar of the termination cap must be connected to the air intake flex liner and the exhaust collar must be connected to the exhaust flexible liner.

Both Simpson Duravent and Selkirk co-linear to co-axial adaptors have been approved on this appliance (**NOTE: A vent adaptor will be required directly off the appliance**). Follow vent manufacturer’s installation instructions.

Different manufacturer’s venting components must not be combined. Once the preferred manufacturer’s appliance adaptor has been attached, the remainder of the system must be that of the same manufacturer.

The only exception to this rule is to use Wolf Steel’s approved 3” flex liner and co-linear termination.



* Measured from appliance flue collar to termination flue collar

5.5 MOBILE HOME INSTALLATION

This appliance is certified to be installed as an OEM (Original Equipment Manufacturer) installation in a manufactured home or mobile home and must be installed in accordance with the manufacturer's instructions and the Manufactured Home Construction and Safety Standard, Title 24 CFR, Part 3280, in the United States or the Mobile Home Standard, CAN/CSA Z240 MH Series, in Canada. This appliance is only for use with the type(s) of gas indicated on the rating plate. A conversion kit is supplied with the mobile home appliance.

This Mobile/Manufactured Home Listed appliance comes factory equipped with a means to secure the unit. Built in appliances are equipped with 1/4" diameter holes located in the front left and right corners of the base. Use #10 hex head screws, inserted through the holes in the base to secure. For free standing products contact your local authorized dealer / distributor for the appropriate securing kit. For mobile home installations, the appliance must be fastened in place. It is recommended that the appliance be secured in all installations. Always turn off the pilot and the fuel supply at the source, prior to moving the mobile home. After moving the mobile home and prior to lighting the appliance, ensure that the logs are positioned correctly.

This appliance is certified to be installed in an aftermarket permanently located, manufactured (mobile) home, where not prohibited by local codes.
This appliance is only for use with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gases, unless a certified kit is used.

Conversion Kits
This appliance is field convertible between Natural Gas (NG) and Propane (LP).
To convert from one gas to another consult your Authorized dealer/distributor.

29.1

5.6 GAS INSTALLATION

⚠ WARNING
RISK OF FIRE, EXPLOSION OR ASPHYXIATION. ENSURE THERE ARE NO IGNITION SOURCES SUCH AS SPARKS OR OPEN FLAMES.
SUPPORT GAS CONTROL WHEN ATTACHING GAS SUPPLY PIPE TO PREVENT DAMAGING GAS LINE.
ALWAYS LIGHT THE PILOT WHETHER FOR THE FIRST TIME OR IF THE GAS SUPPLY HAS RUN OUT WITH THE GLASS DOOR OPENED OR REMOVED. PURGING OF THE GAS SUPPLY LINE SHOULD BE PERFORMED BY A QUALIFIED SERVICE TECHNICIAN. ASSURE THAT A CONTINUOUS GAS FLOW IS AT THE BURNER BEFORE CLOSING THE DOOR. ENSURE ADEQUATE VENTILATION. FOR GAS AND ELECTRICAL LOCATIONS, SEE "DIMENSION" SECTION.
ALL GAS CONNECTIONS MUST BE CONTAINED WITHIN THE APPLIANCE WHEN COMPLETE.
HIGH PRESSURE WILL DAMAGE VALVE. DISCONNECT GAS SUPPLY PIPING BEFORE TESTING GAS LINE AT TEST PRESSURES ABOVE 1/2 PSIG.
VALVE SETTINGS HAVE BEEN FACTORY SET, DO NOT CHANGE.

Installation and servicing to be done by a qualified installer.

A. Move the appliance into position and secure.

B. If equipped with a flex connector the appliance is designed to accept a 1/2" gas supply. Without the connector it is designed to accept a 3/8" gas supply. The appliance is equipped with a manual shut off valve to turn off the gas supply to the appliance.

C. Connect the gas supply in accordance to local codes. In the absence of local codes, install to the current CAN/CSA-B149.1 Installation Code in Canada or to the current National Fuel Gas Code, ANSI Z223.1 / NFPA 54 in the United States.

D. When flexing any gas line, support the gas valve so that the lines are not bent or kinked.

E. The gas line flex-connector should be installed to provide sufficient movement for shifting the burner assembly on it's side to aid with servicing components.

F. Check for gas leaks by brushing on a soap and water solution. **Do not use open flame.**

30.1A

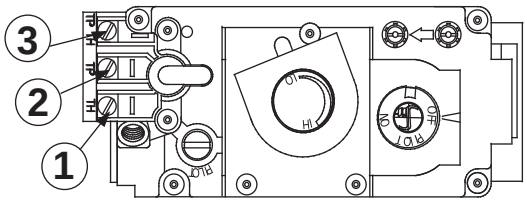
5.7 OPTIONAL WALL SWITCH

WARNING

DO NOT CONNECT EITHER THE WALL SWITCH, THERMOSTAT OR GAS VALVE DIRECTLY TO 110 VOLT ELECTRICITY.

For ease of accessibility, an optional remote wall switch or millivolt thermostat may be installed in a convenient location. Route a 2 strand, solid core millivolt wire from the valve to the wall switch or millivolt thermostat. The recommended maximum lead length depends on wire size:

WIRE SIZE	MAX. LENGTH
14 gauge	100 feet
16 gauge	60 feet
18 gauge	40 feet



Disconnect the existing wires from terminals 1 and 3 (from the ON/OFF switch) and replace with the leads from the wall switch / millivolt thermostat.

50.1

6.0 FRAMING

6.1 GD36 FRAMING

WARNING

RISK OF FIRE!

IN ORDER TO AVOID THE POSSIBILITY OF EXPOSED INSULATION OR VAPOUR BARRIER COMING IN CONTACT WITH THE APPLIANCE BODY, IT IS RECOMMENDED THAT THE WALLS OF THE APPLIANCE ENCLOSURE BE “FINISHED” (IE: DRYWALL / SHEETROCK), AS YOU WOULD FINISH ANY OTHER OUTSIDE WALL OF A HOME. THIS WILL ENSURE THAT CLEARANCE TO COMBUSTIBLES IS MAINTAINED WITHIN THE CAVITY.

DO NOT NOTCH THE FRAMING AROUND THE APPLIANCE STAND-OFFS. FAILURE TO MAINTAIN AIR SPACE CLEARANCE MAY CAUSE OVER HEATING AND FIRE. PREVENT CONTACT WITH SAGGING OR LOOSE INSULATION OR FRAMING AND OTHER COMBUSTIBLE MATERIALS. BLOCK OPENING INTO THE CHASE TO PREVENT ENTRY OF BLOWN-IN INSULATION. MAKE SURE INSULATION AND OTHER MATERIALS ARE SECURED.

WHEN CONSTRUCTING THE ENCLOSURE ALLOW FOR FINISHING MATERIAL THICKNESS TO MAINTAIN CLEARANCES. FRAMING OR FINISHING MATERIAL CLOSER THAN THE MINIMUMS LISTED MUST BE CONSTRUCTED ENTIRELY OF NON-COMBUSTIBLE MATERIALS. MATERIALS CONSISTING ENTIRELY OF STEEL, IRON, BRICK, TILE, CONCRETE, SLATE, GLASS OR PLASTERS, OR ANY COMBINATION THEREOF ARE SUITABLE. MATERIALS THAT ARE REPORTED AS PASSING ASTM E 136, STANDARD TEST METHOD FOR BEHAVIOUR OF MATERIALS IN A VERTICAL TUBE FURNACE AT 750°C AND UL763 SHALL BE CONSIDERED NON-COMBUSTIBLE MATERIALS.

MINIMUM CLEARANCE TO COMBUSTIBLES MUST BE MAINTAINED OR A SERIOUS FIRE HAZARD COULD RESULT.

THE APPLIANCE REQUIRES A MINIMUM ENCLOSURE HEIGHT. MEASURE FROM THE APPLIANCE BASE.

IF STEEL STUD FRAMING KITS WITH CEMENT BOARD ARE PROVIDED, THEY MUST BE INSTALLED.

71.1

It is best to frame your appliance after it is positioned and the vent system is installed. Frame to local building codes.
It is not necessary to install a hearth extension with this appliance system.
When roughing in the appliance, raise the appliance to accommodate for the thickness of the finished floor materials, i.e. tile, carpeting, hard wood, which if not planned for will interfere with the opening of the lower access door and the installation of many decorative flashing accessories.
Combustible materials may be installed flush with the front of the appliance but must not cover any of the black face-areas of the appliance. Non-combustible material (brick, stone or ceramic tile) may protrude in these areas.

Minimum clearance to combustible construction from appliance and vent surfaces:
Combustible Framing:
- 0" to stand-offs
- 1" to bottom and sides of the vent pipe*
- 2" to top of the vent pipe*

Combustible Finishing:
- 0" to rear
- 0" to front face top and sides
- 14 1/4" recessed depth

Rear Exit
- 42 1/4" to enclosure top from base of the appliance
- 54" to ceiling from base of the appliance

Top Exit
- 63" to enclosure top from base of the appliance
- 54" to ceiling from base of the appliance

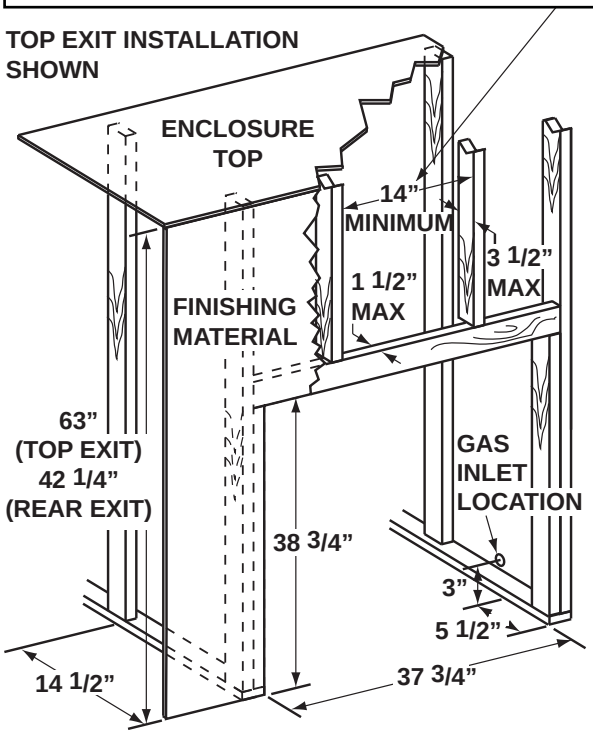
*** GD36 HORIZONTAL VENT SECTIONS:** A minimum clearance of 1" at the bottom and sides and 2" at the top of the vent pipe on all horizontal runs to combustibles is required. Use firestop spacer W010-1777 (supplied).

*** GD36 VERTICAL VENT SECTIONS:** A minimum of 1" all around the vent pipe on all vertical runs to combustibles is required except for clearances in appliance enclosures. See "MINIMUM ENCLOSURE CLEARANCES" section. Use firestop spacer W500-0096 (not supplied).

6.1.1 MINIMUM FRAMING DIMENSIONS

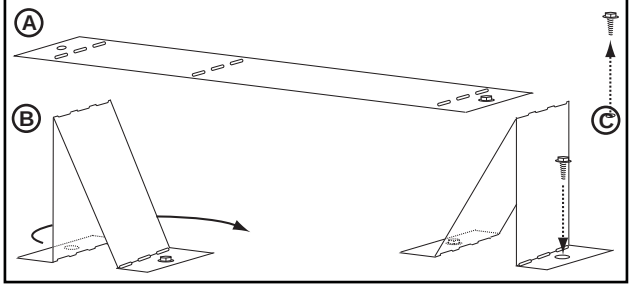
⚠ WARNING

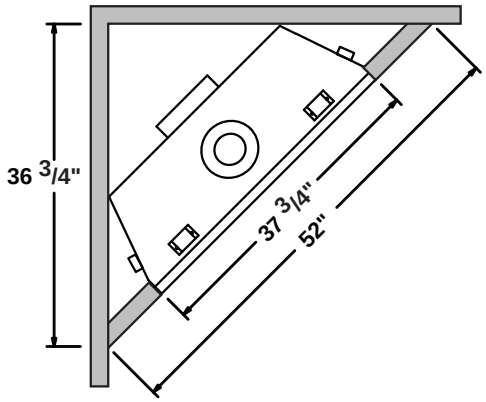
FOR TOP EXIT APPLICATIONS: DO NOT BUILD INTO THIS AREA. IT MUST BE LEFT CLEAR TO PROVIDE ADEQUATE CLEARANCE FOR THE VENT. IN THIS 14" WIDE AREA CENTRED ALONG THE FRONT OF THE APPLIANCE, NO COMBUSTIBLES ARE ALLOWED.

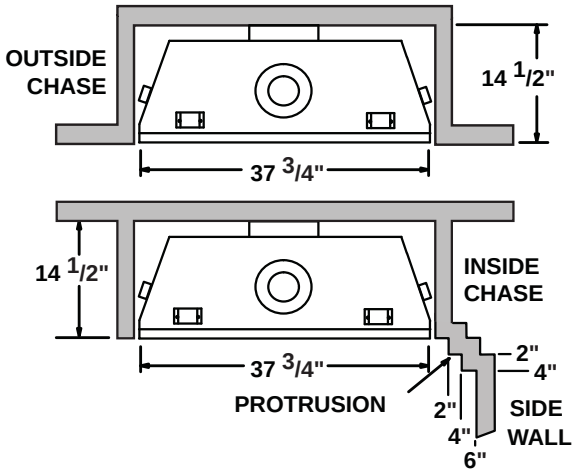


STAND-OFF ASSEMBLY

Bend and secure the top stand-off(s) as illustrated:







Combustion protrusions such as mantels and shelves may occur at or after a minimum distance of 2" away from the side of the appliance.

Thereafter, the depth of any protrusions must be equal to or less than the distance from the side of the appliance up to a depth of 6", after which no greater clearance than 6" is required. This can be considered a side wall with no length boundary.

6.2 BGD36 FRAMING

⚠ WARNING

RISK OF FIRE!

IN ORDER TO AVOID THE POSSIBILITY OF EXPOSED INSULATION OR VAPOUR BARRIER COMING IN CONTACT WITH THE APPLIANCE BODY, IT IS RECOMMENDED THAT THE WALLS OF THE APPLIANCE ENCLOSURE BE "FINISHED" (IE: DRYWALL / SHEETROCK), AS YOU WOULD FINISH ANY OTHER OUTSIDE WALL OF A HOME. THIS WILL ENSURE THAT CLEARANCE TO COMBUSTIBLES IS MAINTAINED WITHIN THE CAVITY.

DO NOT NOTCH THE FRAMING AROUND THE APPLIANCE STAND-OFFS. FAILURE TO MAINTAIN AIR SPACE CLEARANCE MAY CAUSE OVER HEATING AND FIRE. PREVENT CONTACT WITH SAGGING OR LOOSE INSULATION OR FRAMING AND OTHER COMBUSTIBLE MATERIALS. BLOCK OPENING INTO THE CHASE TO PREVENT ENTRY OF BLOWN-IN INSULATION. MAKE SURE INSULATION AND OTHER MATERIALS ARE SECURED.

WHEN CONSTRUCTING THE ENCLOSURE ALLOW FOR FINISHING MATERIAL THICKNESS TO MAINTAIN CLEARANCES. FRAMING OR FINISHING MATERIAL CLOSER THAN THE MINIMUMS LISTED MUST BE CONSTRUCTED ENTIRELY OF NON-COMBUSTIBLE MATERIALS. MATERIALS CONSISTING ENTIRELY OF STEEL, IRON, BRICK, TILE, CONCRETE, SLATE, GLASS OR PLASTERS, OR ANY COMBINATION THEREOF ARE SUITABLE. MATERIALS THAT ARE REPORTED AS PASSING ASTM E 136, STANDARD TEST METHOD FOR BEHAVIOUR OF MATERIALS IN A VERTICAL TUBE FURNACE AT 750°C AND UL763 SHALL BE CONSIDERED NON-COMBUSTIBLE MATERIALS.

MINIMUM CLEARANCE TO COMBUSTIBLES MUST BE MAINTAINED OR A SERIOUS FIRE HAZARD COULD RESULT.

THE APPLIANCE REQUIRES A MINIMUM ENCLOSURE HEIGHT. MEASURE FROM THE APPLIANCE BASE.

IF STEEL STUD FRAMING KITS WITH CEMENT BOARD ARE PROVIDED, THEY MUST BE INSTALLED.

71.1

It is best to frame your appliance after it is positioned and the vent system is installed. Frame to local building codes.
It is not necessary to install a hearth extension with this appliance.
When roughing in the appliance, raise the appliance to accommodate for the thickness of the finished floor materials, i.e. tile, carpeting, hard wood, which if not planned for will interfere with the opening of the lower access door and the installation of many decorative flashing accessories.
Combustible materials may be installed flush with the front of the appliance but must not cover any of the black face-areas of the appliance. Non-combustible material (brick, stone or ceramic tile) may protrude in these areas.

Minimum clearance to combustible construction from appliance and vent surfaces:

Combustible Framing:
- 0" to stand-offs
- 1" to bottom and sides of the vent pipe*
- 2" to top of the vent pipe*

Combustible Finishing:
- 0" to rear
- 0" to front face top and sides
- 14 1/4" recessed depth

Rear Exit
- 39" to enclosure top from base of the appliance
- 54" to ceiling from base of the appliance

Top Exit
- 48 3/8" to enclosure top from base of the appliance
- 54" to ceiling from base of the appliance

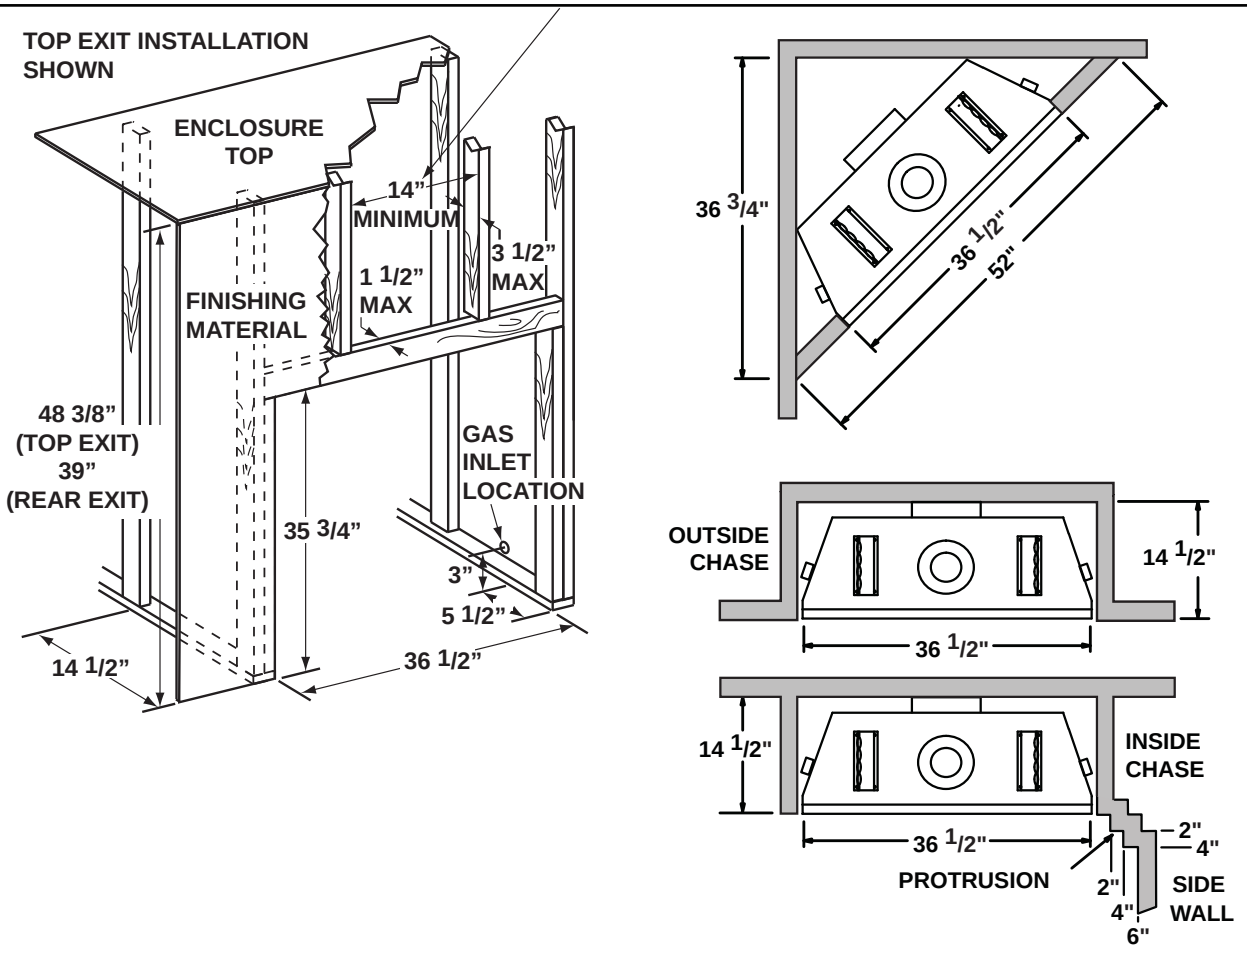
*** BGD36 HORIZONTAL VENT SECTIONS:** A minimum of 1" at the bottom and sides and 2" at the top of the vent pipe on all horizontal runs to combustibles is required. Use firestop spacer W010-1774 (supplied).

*** BGD36 VERTICAL VENT SECTIONS:** A minimum of 1" all around the vent pipe on all vertical runs to combustibles is required except for clearances in appliance enclosures. See "MINIMUM ENCLOSURE CLEARANCES" section. Use firestop spacer W500-0096 (not supplied).

6.2.1 MINIMUM FRAMING DIMENSIONS

⚠ WARNING

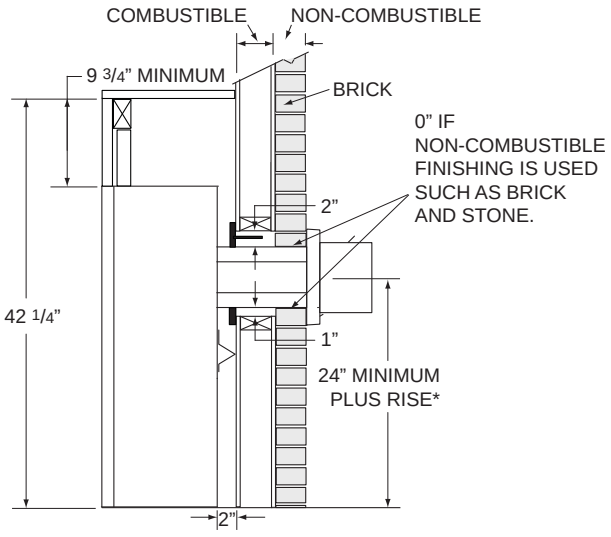
FOR TOP EXIT APPLICATIONS: DO NOT BUILD INTO THIS AREA. IT MUST BE LEFT CLEAR TO PROVIDE ADEQUATE CLEARANCE FOR THE VENT. IN THIS 14" WIDE AREA CENTRED ALONG THE FRONT OF THE APPLIANCE, NO COMBUSTIBLES ARE ALLOWED.



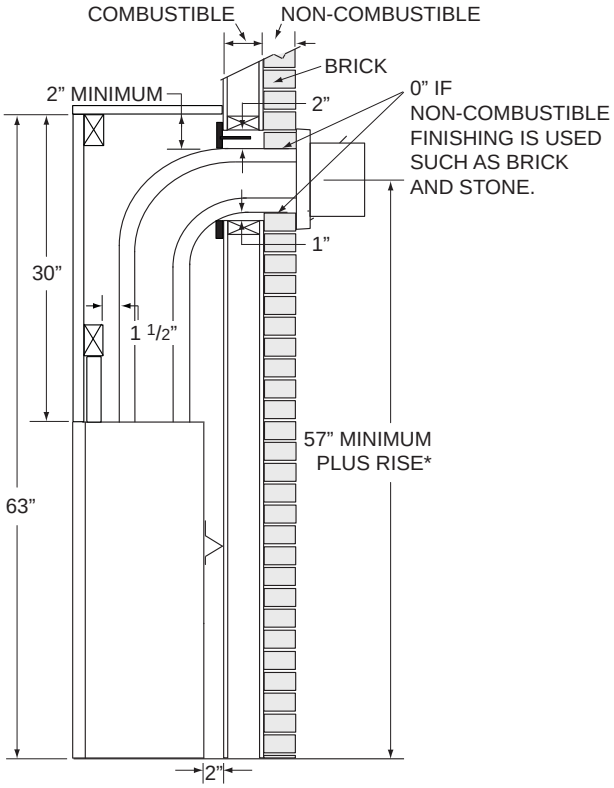
Combustion protrusions such as mantels and shelves may occur at or after a minimum distance of 2" away from the side of the appliance. Thereafter, the depth of any protrusions must be equal to or less than the distance from the side of the appliance up to a depth of 6", after which no greater clearance than 6" is required. This can be considered a side wall with no length boundary.

6.3 MINIMUM ENCLOSURE CLEARANCES

6.3.1 GD36



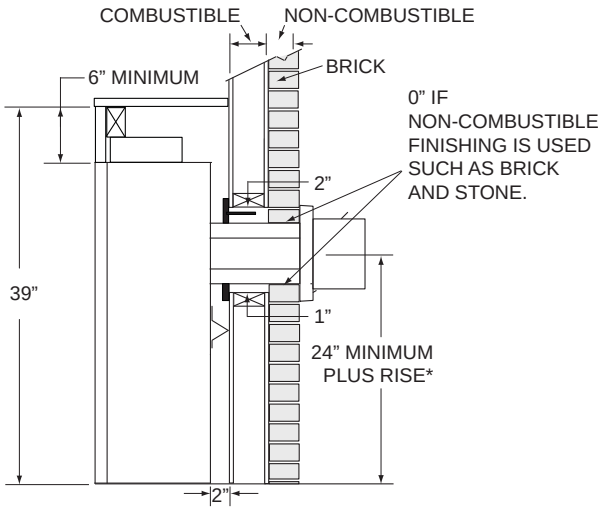
REAR EXIT ENCLOSURE
The appliance requires a minimum enclosure height of 42 1/4". For temperature requirements, the enclosure space around and above the appliance must be left unobstructed.



TOP EXIT ENCLOSURE
The appliance requires a minimum enclosure height of 63". For temperature requirements, the enclosure space around and above the appliance must be left unobstructed.

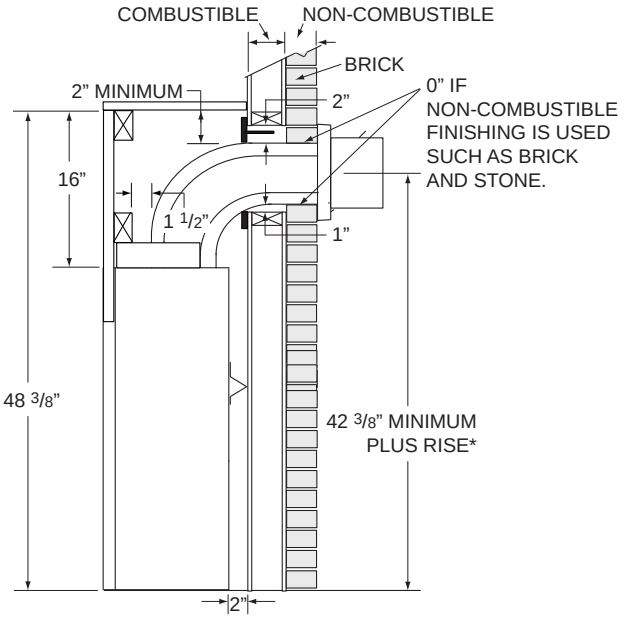
*** See "VENTING" section.**

6.3.2 BGD36



REAR EXIT ENCLOSURE

The appliance requires a minimum enclosure height of 39". For temperature requirements, the enclosure space around and above the appliance must be left unobstructed.

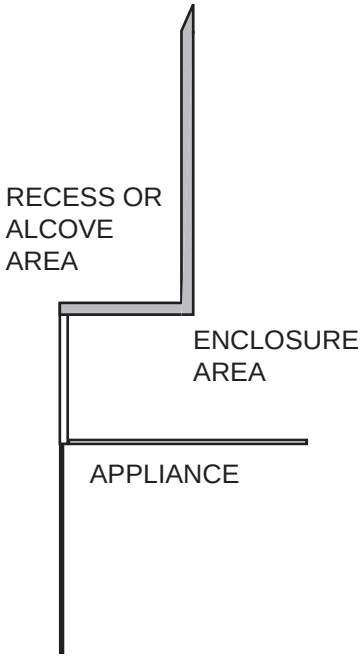


TOP EXIT ENCLOSURE

The appliance requires a minimum enclosure height of 48 3/8". For temperature requirements, the enclosure space around and above the appliance must be left unobstructed.

* See "VENTING" section.

6.4 ALCOVE CLEARANCES



NOTE: Recesses or alcoves above the appliance can be made as deep as desired provided the minimum clearances to combustibles are maintained.

Non-combustible material can be used, provided the minimum clearances to combustible materials are applied.

The minimum enclosure volume must be increased by no less than the volume of the recess. This adjustment can be made by increasing any or all of the height, width and depth of the enclosure.

71.2

6.5 MINIMUM MANTEL CLEARANCES

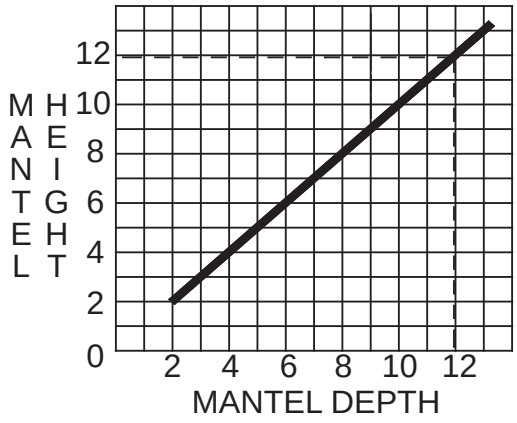
⚠ WARNING

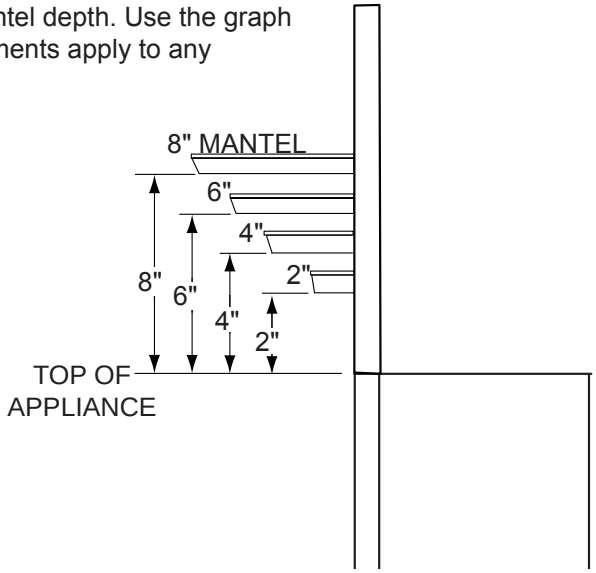
RISK OF FIRE, MAINTAIN ALL SPECIFIED AIR SPACE CLEARANCES TO COMBUSTIBLES. FAILURE TO COMPLY WITH THESE INSTRUCTIONS MAY CAUSE A FIRE OR CAUSE THE APPLIANCE TO OVERHEAT. ENSURE ALL CLEARANCES (I.E. BACK, SIDE, TOP, VENT, MANTEL, FRONT, ETC.) ARE CLEARLY MAINTAINED.

WHEN USING PAINT OR LACQUER TO FINISH THE MANTEL, THE PAINT OR LACQUER MUST BE HEAT RESISTANT TO PREVENT DISCOLOURATION.

73.1

Combustible Mantel clearance can vary according to the Mantel depth. Use the graph to help evaluate the clearance needed. These same requirements apply to any combustibles protruding on either side of the appliance.





6.6 BGD36 NAILING TAB INSTALLATION

A. Attach the nailing tabs to the corner posts using the 2 sheet metal screws supplied. Secure through the centre of the top and bottom slots in the nailing tab and then through the existing holes in the corner posts. If there are no existing holes, follow these instructions:

B. To determine the final location of the nailing tab you must first determine the thickness of your finishing material (i.e. drywall). This will determine the dimension from the front edge of the corner post to the nailing tab. Once the nailing tab is in the desired location, drill through the centre hole of the nailing tab. Secure with a sheet metal screw*.

* Additional set screws may be installed.

55.1A

7.0 FINISHING

⚠ WARNING
RISK OF FIRE!
NEVER OBSTRUCT THE FRONT OPENING OF THE APPLIANCE.
THE FRONT OF THE APPLIANCE MUST BE FINISHED WITH ANY NON-COMBUSTIBLE MATERIALS SUCH AS BRICK, MARBLE, GRANITE, ETC., PROVIDED THAT THESE MATERIALS DO NOT GO BELOW THE SPECIFIED DIMENSION AS ILLUSTRATED.
DO NOT STRIKE, SLAM OR SCRATCH GLASS. DO NOT OPERATE APPLIANCE WITH GLASS REMOVED, CRACKED, BROKEN OR SCRATCHED.
FACING AND/OR FINISHING MATERIAL MUST NEVER OVERHANG INTO THE APPLIANCE OPENING.

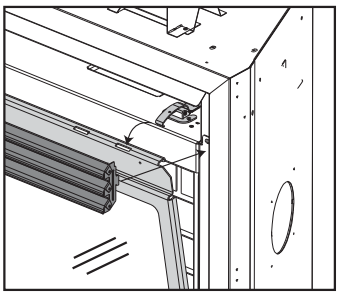
72.1A

7.1 DOOR REMOVAL AND INSTALLATION

⚠ WARNING
GLASS MAY BE HOT, DO NOT TOUCH GLASS UNTIL COOLED.
THE DOOR LATCHES ARE PART OF A SAFETY SYSTEM AND MUST BE PROPERLY ENGAGED. DO NOT OPERATE THE APPLIANCE WITH LATCHES DISENGAGED.
FACING AND/OR FINISHING MATERIALS MUST NOT INTERFERE WITH AIR FLOW THROUGH AIR OPENINGS, LOUVRES OPENINGS, OPERATION OF LOUVRES OR DOORS OR ACCESS FOR SERVICE. OBSERVE ALL CLEARANCES WHEN APPLYING COMBUSTIBLE MATERIALS.
BEFORE DOOR IS REMOVED TURN THE APPLIANCE OFF AND WAIT UNTIL APPLIANCE IS COOL TO THE TOUCH. DOORS ARE HEAVY AND FRAGILE SO HANDLE WITH CARE.

75.1

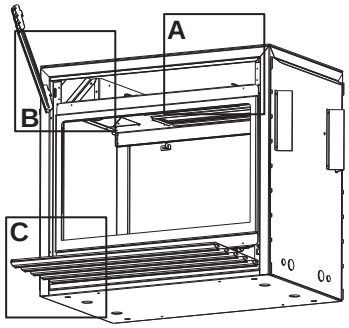
The upper louvres must be removed to allow the door to be opened or closed. To access the lower door latch, open the valve control door. Release the top and bottom door latches, located at the right side of the door.

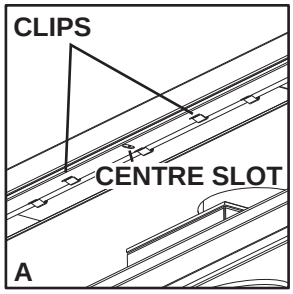


Optional plated door trim, and arched door facia are available at your local authorized dealer / distributor.

<u>NOTE:</u> The protective wrap on plated parts is best removed when the assembly is at room temperature but this can be improved if the assembly is warmed, using a hair dryer or similar heat source.

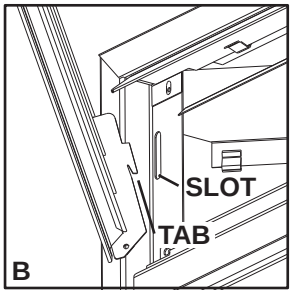
7.2 LOUVRE INSTALLATION





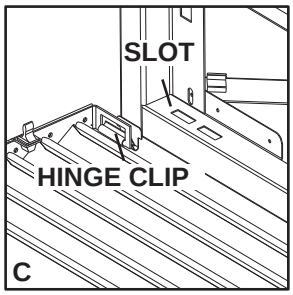
HOOD

Attach the hood by pressing the top flange into the clips along the top of the louvre opening. Secure using a screw through the centre slot.



UPPER LOUVRES

Insert the louvre tabs into the slots located at the top left and right corners of the unit.



LOWER LOUVRES

Insert the hinge clips into the slots located at the bottom left and right corners of the unit. To remove the louvres, pull the back tabs of the clips forward, while pushing the louvre assembly back. Lift the clip.

57.2

7.3 LOG PLACEMENT

⚠ WARNING

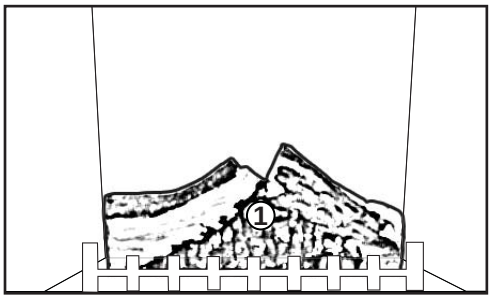
FAILURE TO POSITION THE LOGS IN ACCORDANCE WITH THESE DIAGRAMS OR FAILURE TO USE ONLY LOGS SPECIFICALLY APPROVED WITH THIS APPLIANCE MAY RESULT IN PROPERTY DAMAGE OR PERSONAL INJURY.

LOGS MUST BE PLACED IN THEIR EXACT LOCATION IN THE APPLIANCE. DO NOT MODIFY THE PROPER LOG POSITIONS, SINCE APPLIANCE MAY NOT FUNCTION PROPERLY AND DELAYED IGNITION MAY OCCUR.

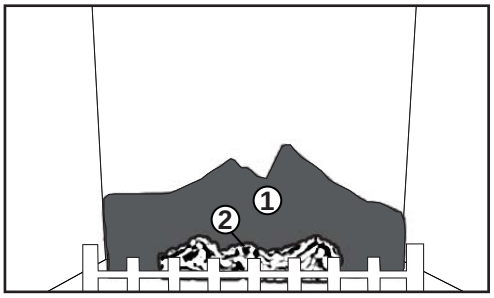
THE LOGS ARE FRAGILE AND SHOULD BE HANDLED WITH CARE.

76.1A

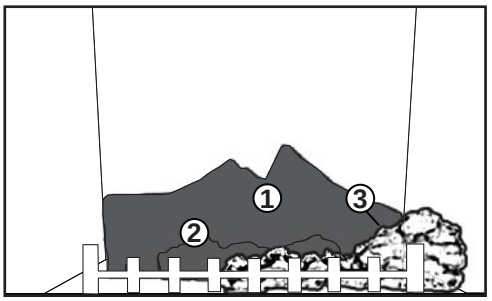
PHAZER™ logs and glowing embers exclusive to Napoleon, provide a unique and realistic glowing effect that is different in every installation. Take the time to carefully position the glowing embers for a maximum glowing effect. Log colours may vary. During the initial use of the appliance, the colours will become more uniform as colour pigments burn in during the heat activated curing process.



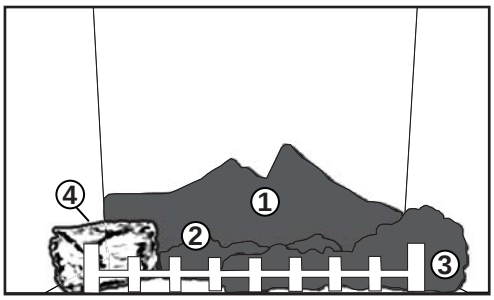
A. Place the back log (#1) onto the log support tray and in front of the tabs. The tabs maintain an air space between the log and firebox back to facilitate combustion air flow. Ensure that the back of the log rests against the brackets on the back wall of the firebox.



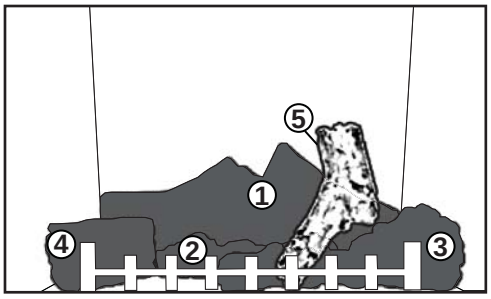
B. Move the charcoal strip into position lining up the holes in the bottom with the studs located on the burner on the burner. Ensure strip sits flat on the burner.



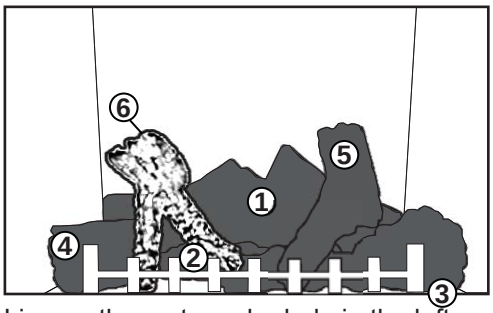
C. Position the front right log just behind the grate lining up the holes in the bottom with the studs located on the log support.



D. Move the left log into position lining up the hole in the bottom with the stud on the left side of the log support.



E. Line up the square hole in the right crossover with the square post located on the right side of log and install as shown.



F. Line up the rectangular hole in the left crossover with the rectangular post located on the left side of log and install as shown.

7.4 CHARCOAL EMBERS

Randomly place the charcoal embers along the front and sides of the log support tray in a realistic manner.
Fine dust found in the bottom of the bag should not be used.
<u>NOTE:</u> Charcoal embers are not to be placed on the burner.

32.1

7.5 VERMICULITE (MODEL GD36 ONLY)

Sprinkle vermiculite around the charcoal embers.
NOTE: Vermiculite is not to be placed on the burner.

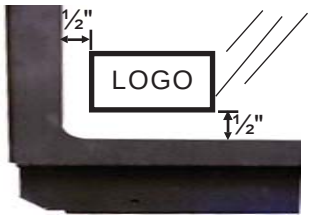
33.1

7.6 GLOWING EMBERS

Tear the embers into pieces and place along the front row of ports covering all of the burner area in front of the small logs. Care should be taken to shred the embers into <u>thin</u>, small irregular pieces as only the exposed edges of the fibre hairs will glow. ***The ember material will only glow when exposed to direct flame; however, care should be taken to not block the burner ports.***
Blocked burner ports can cause an incorrect flame pattern, carbon deposits and delayed ignition. ***PHAZER***™ logs glow when exposed to direct flame. Use only certified "glowing embers" and ***PHAZER***™ logs available from your authorized dealer / distributor.

7.7 LOGO PLACEMENT

Remove the backing of the logo supplied and place on the glass viewing door, as indicated.



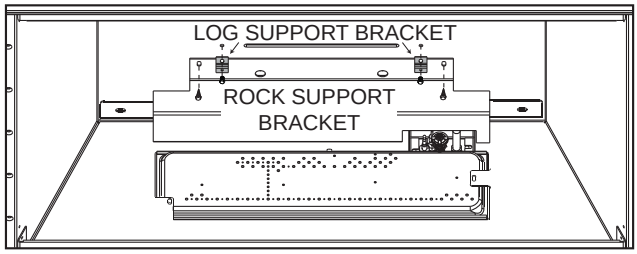
97.1

7.8 OPTIONAL ROCK KIT

(RAK-ROCK ADAPTOR KIT IS NECESSARY WITH THIS KIT).

⚠ WARNING

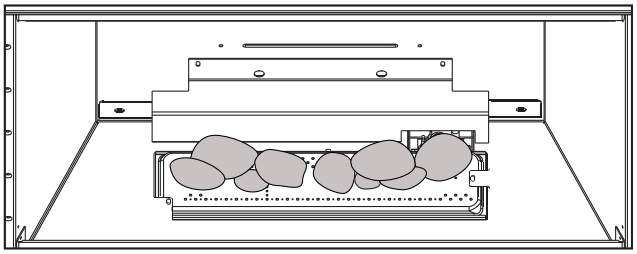
REAL ROCKS MUST NOT BE USED IN THIS APPLIANCE. HEAT WILL CAUSE THEM TO EXPLODE.



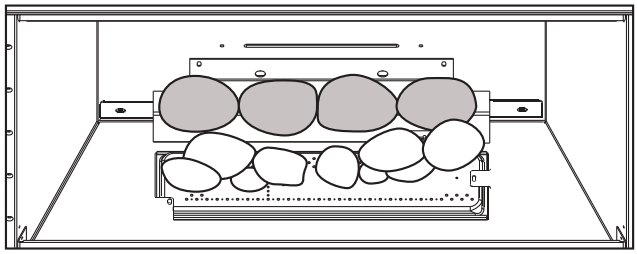
A. Remove all logs and media.

B. Remove the 2 screws and log support brackets already installed in the firebox and secure the rock support bracket along the back of the firebox.

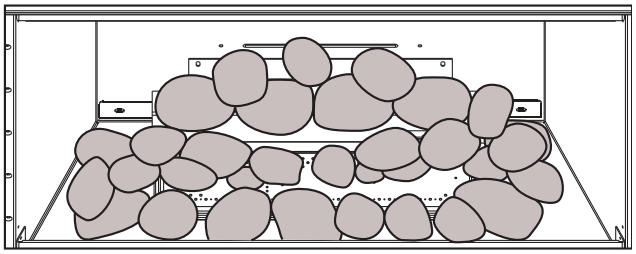
NOTE: When the porcelain panels are installed, the rock support bracket is secured over the rear porcelain panel. Tabs on rear porcelain panel must be bent up to sit flush on the rock support bracket.



C. Move the two rock clusters into position, lining up the studs located on the burner with the holes in the bottom of the rocks. Ensure the clusters are sitting flat on the burner.
NOTE: For best results its recommended you remove the grate and using Wolf Steel approved paint, paint the surfaces underneath where the grate was removed. High temperature silicone can be used to help hold the cutout rocks in place.



D. Place the large cut out rocks along the edge of the rock support bracket as shown.



E. Place the remaining refractory rocks around the burner as desired, **making sure not to cover any burner ports.** (There are no set locations).

8.0 OPTIONAL BLOWER INSTALLATION

⚠WARNING

RISK OF FIRE AND ELECTRICAL SHOCK.

TURN OFF THE GAS AND ELECTRICAL POWER BEFORE SERVICING THIS APPLIANCE.

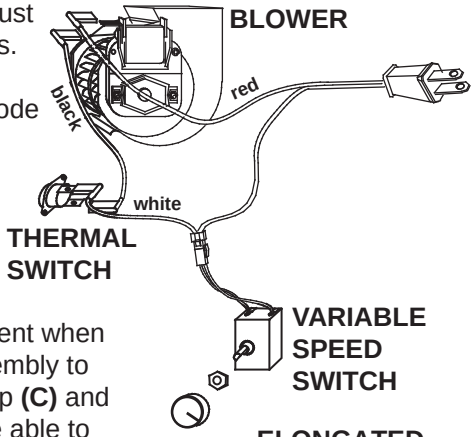
USE ONLY WOLF STEEL APPROVED OPTIONAL ACCESSORIES AND REPLACEMENT PARTS WITH THIS APPLIANCE. USING NON-LISTED ACCESSORIES (BLOWERS, DOORS, LOUVRES, TRIMS, GAS COMPONENTS, VENTING COMPONENTS, ETC.) COULD RESULT IN A SAFETY HAZARD AND WILL VOID THE WARRANTY AND CERTIFICATION.

ENSURE THAT THE FAN'S POWER CORD IS NOT IN CONTACT WITH ANY SURFACE OF THE APPLIANCE TO PREVENT ELECTRICAL SHOCK OR FIRE DAMAGE. DO NOT RUN THE POWER CORD BENEATH THE APPLIANCE.

THE WIRE HARNESS PROVIDED IN THE BLOWER KIT IS A UNIVERSAL HARNESS. WHEN INSTALLED, ENSURE THAT ANY EXCESS WIRE IS CONTAINED, PREVENTING IT FROM MAKING CONTACT WITH MOVING OR HOT OBJECTS.

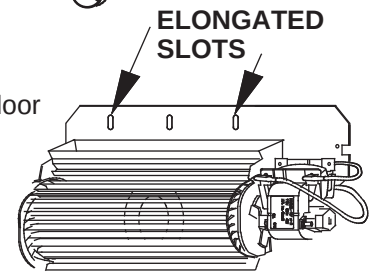
51.5

INSTALLATION TO BE DONE BY A QUALIFIED INSTALLER and must be electrically connected and grounded in accordance with local codes. In the absence of local codes, use the current CSA C22.1 Canadian electrical code in Canada or the ANSI / NFPA 70 National Electrical Code in the United States.



If the appliance was not previously equipped with a blower: Route a grounded 2-wire, 60hz power cable to the receptacle / junction box. At this point, it must be strain relieved and insulated.

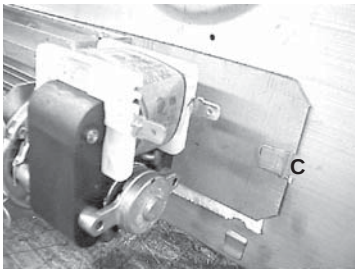
The three slots on the blower mounting bracket allow ease of adjustment when attaching the blower. For a quiet running blower, do not allow the assembly to sit on the firebox base. Slide the vibration reducing pad **(A)** into the clip **(C)** and up against the threaded stud **(B)** at the other end. The blower must be able to be positioned entirely onto the pad.



To ease installation of the blower, remove the hinge screen and valve control door (lower louvres) from the base of the appliance.

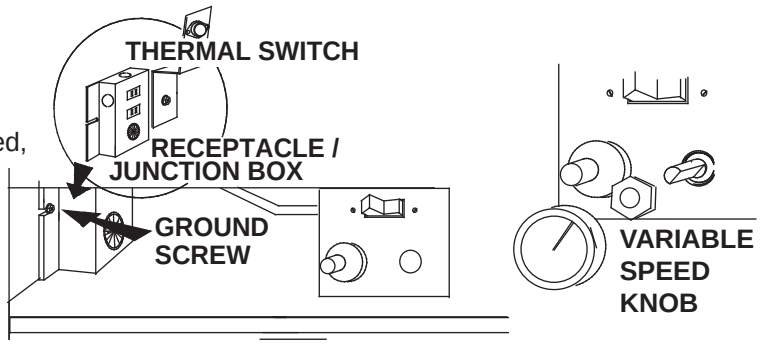
Tilt the blower onto its side. Slide it past the controls and into the clip **(C)**. Secure to the threaded stud using the lock washer and wing nut provided. Ensure that the blower does not touch the appliance base or the firebox.

Attach the connectors from the black and white wires to the thermal switch and secure the thermal switch bracket to the bottom left of the unit using the screws provided. Ensure that the thermal switch touches the firebox wall.



Attach the connectors from the black and red wires to the blower.

Attach and secure the variable speed switch using the nut provided. Plug the harness cord into the receptacle.The wire harness provided in this kit is a universal harness. When installed, ensure that any excess wire is contained, preventing it from making contact with moving or hot objects.



Because the blower is thermally activated, when turned on, it will automatically start approximately 10 minutes after lighting the appliance and will run for approximately 30-45 minutes after the appliance has been turned off. Use of the fan increases the output of heat. Drywall dust will penetrate into the blower bearings, causing irreparable damage. Care must be taken to prevent drywall dust from coming into contact with the blower or its compartment. Any damage resulting from this condition is not covered by the warranty policy.

51.1

9.0 OPERATION

⚠ WARNING

IF YOU DO NOT FOLLOW THESE INSTRUCTIONS EXACTLY, A FIRE OR EXPLOSION MAY RESULT CAUSING PROPERTY DAMAGE, PERSONAL INJURY OR LOSS OF LIFE.

ALWAYS LIGHT THE PILOT WHETHER FOR THE FIRST TIME OR IF THE GAS SUPPLY HAS RUN OUT WITH THE GLASS DOOR OPENED OR REMOVED.

Ensure that a continuous gas flow is at the burner before installing the door. When lit for the first time, the appliance will emit an odor for a few hours. This is a normal temporary condition caused by the "burn-in" of paints and lubricants used in the manufacturing process and will not occur again.
After extended periods of non-operation such as following a vacation or a warm weather season, the appliance may emit a slight odor for a few hours. This is caused by dust particles in the heat exchanger burning off. In both cases, open a window to sufficiently ventilate the room.

FOR YOUR SAFETY READ BEFORE LIGHTING:

A. This appliance is equipped with a pilot which must be lit by hand while following these instructions exactly.
B. Before operating smell all around the appliance area for gas and next to the floor because some gas is heavier than air and will settle on the floor.
C. Use only your hand to turn the gas control knob. Never use tools. If the knob will not turn by hand, do not try to repair it. Call a qualified service technician. Force or attempted repair may result in a fire or explosion.
D. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and replace any part of the control system and any gas control which has been under water.

WHAT TO DO IF YOU SMELL GAS:

- Turn off all gas to the appliance.
- Open windows.
- Do not try to light any appliance.
- Do not touch any electric switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions.
- If you cannot reach your gas supplier, call the fire department.

GAS KNOB

LIGHTING INSTRUCTIONS:

WARNING: The gas valve has an interlock device which will not allow the pilot burner to be lit until the thermo-couple has cooled. Allow approximately 60 seconds for the thermocouple to cool.
When lighting and re-lighting, the gas knob cannot be turned from pilot to off unless the knob is depressed slightly.

1. Stop! Read the above safety information on this label.
2. Turn off all electric power to the appliance.
3. Turn the gas knob clockwise ↷ to off.
4. Wait five (5) minutes to clear out any gas. If you smell gas including near the floor. Stop! Follow "B" in the above safety information on this label. If you don't smell gas go the next step.
5. Turn gas knob counter-clockwise ↶ to pilot.
6. Depress slightly and hold gas knob while lighting the pilot with the push button igniter. Keep knob depressed for one minute, then release. If pilot does not continue to burn, repeat steps 3 through 5.
7. With pilot lit, depress and turn gas knob counter-clockwise ↶ to on.
8. If equipped with remote on-off switch / thermostat, main burner may not come on when you turn valve to on. Remote switch must be in the on position to ignite burner.
9. Turn on all electric power to the appliance.

TO TURN OFF GAS

1. Turn off all electric power to the appliance if service is to be performed.
2. Push in gas control knob slightly and turn clockwise ↷ to off. Do not force.

TURN THE CONTROL VALVE TO THE OFF POSITION WHEN HEATER IS NOT IN USE.

47.2

10.0 ADJUSTMENT

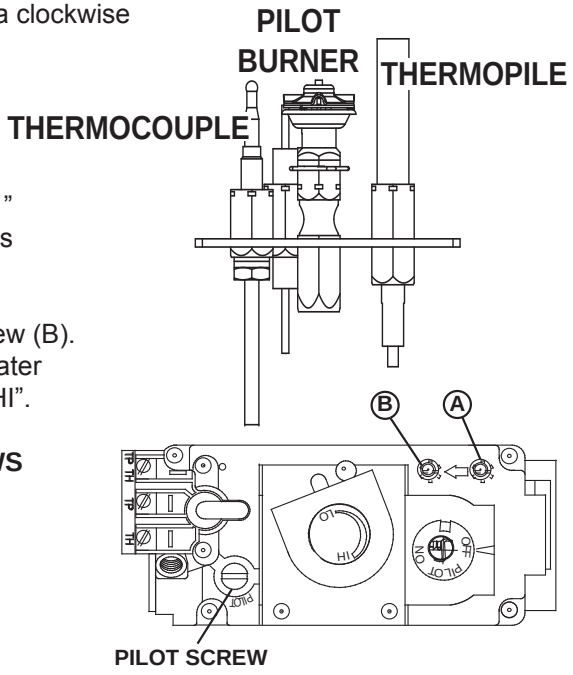
10.1 PILOT BURNER ADJUSTMENT

Adjust the pilot screw to provide properly sized flame. Turn in a clockwise direction to reduce the gas flow.

Inlet pressure can be checked by turning screw (A) counter-clockwise until loosened and then placing pressure gauge tubing over the test point. Gauge should read 7” (minimum 4.5”) water column for natural gas or 13” (11” minimum) water column for propane. Check that main burner is operating on “HI”.

Outlet pressure can be checked the same as above using screw (B). Gauge should read 3.5” water column for natural gas or 10” water column for propane. Check that main burner is operating on “HI”.

AFTER TAKING PRESSURE READINGS, TIGHTEN SCREWS FIRMLY TO SEAL. DO NOT OVER TORQUE. LEAK TEST.



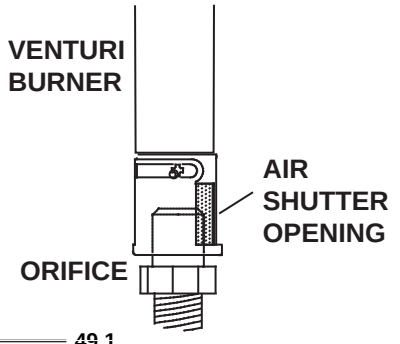
39.3

10.2 VENTURI ADJUSTMENT

This appliance has an air shutter that has been factory set open according to the chart below:

Regardless of venturi orientation, closing the air shutter will cause a more yellow flame, but can lead to carboning. Opening the air shutter will cause a more blue flame, but can cause flame lifting from the burner ports. The flame may not appear yellow immediately; allow 15 to 30 minutes for the final flame colour to be established.

AIR SHUTTER ADJUSTMENT MUST ONLY BE DONE BY A QUALIFIED INSTALLER!



49.1

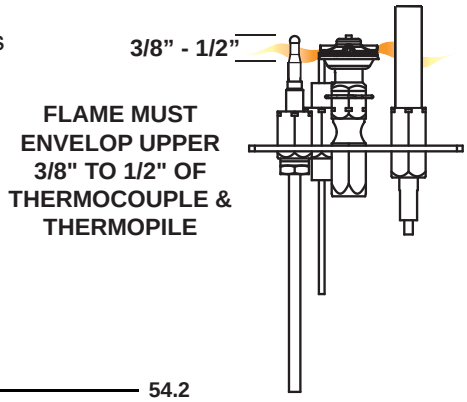
These settings are for rear vented (maximum) horizontal termination. Adjustment may be required depending on fuel type, vent configuration and altitude.

To access the air shutter, remove the two screws that secure the cover to the air housing, taking care not to damage the gasket.

	GD36	BGD36
NG	1/16”	1/16”
LP	1/4”	1/4”

10.3 FLAME CHARACTERISTICS

It's important to periodically perform a visual check of the pilot and burner flames. Compare them to the illustrations provided. If any flames appear abnormal call a service person.



54.2

11.0 MAINTENANCE

⚠ WARNING

TURN OFF THE GAS AND ELECTRICAL POWER BEFORE SERVICING THE APPLIANCE.

APPLIANCE MAY BE HOT, DO NOT SERVICE UNTIL APPLIANCE HAS COOLED.

DO NOT USE ABRASIVE CLEANERS.

CAUTION: Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation. Verify proper operation after servicing. This appliance and its venting system should be inspected before use and at least annually by a qualified service person. The appliance area must be kept clear and free of combustible materials, gasoline or other flammable vapors and liquids. The flow of combustion and ventilation air must not be obstructed.

A. In order to properly clean the burner and pilot assembly, remove the logs, rocks and/or glass to expose both assemblies.

B. Keep the control compartment, media, burner, air shutter opening and the area surrounding the logs clean by vacuuming or brushing, at least once a year.

C. Check to see that all burner ports are burning. Clean out any of the ports which may not be burning or are not burning properly.

D. Check to see that the pilot flame is large enough to engulf the flame sensor and/or thermocouple / thermopile as well as reaches the burner.

E. Replace the cleaned logs, rocks or glass. Failure to properly position the media may cause carboning which can be distributed in the surrounding living area.

F. Check to see that the main burner ignites completely on all openings when turned on. A 5 to 10 second total light-up period is satisfactory. If ignition takes longer, consult your local authorized dealer / distributor.

G. Check that the gasketing on the sides, top and bottom of the door is not broken or missing. Replace if necessary.

H. If for any reason the vent air intake system is disassembled, re-install and re-seal per the instructions provided for the initial installation.

40.1

11.1 DOOR GLASS REPLACEMENT

⚠ WARNING

DO NOT USE SUBSTITUTE MATERIALS.

GLASS MAY BE HOT, DO NOT TOUCH GLASS UNTIL COOLED.

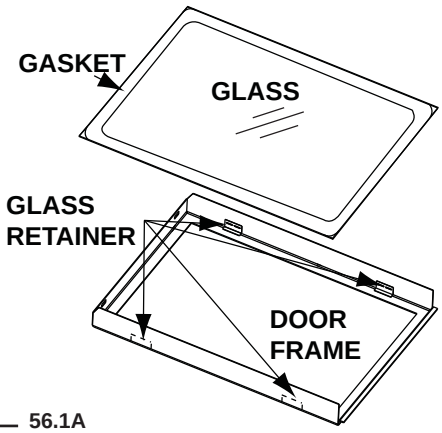
CARE MUST BE TAKEN WHEN REMOVING AND DISPOSING OF ANY BROKEN DOOR GLASS OR DAMAGED COMPONENTS. BE SURE TO VACUUM UP ANY BROKEN GLASS FROM INSIDE THE APPLIANCE BEFORE OPERATION.

DO NOT STRIKE, SLAM OR SCRATCH GLASS. DO NOT OPERATE APPLIANCE WITH GLASS REMOVED, CRACKED, BROKEN OR SCRATCHED.

A. Place the door frame face down careful not to scratch the paint.

B. Center the gasketed glass inside the door frame with the thick side of the gasket facing up.

C. Bend the glass retainers located along the edge of the door frame over the gasket holding the glass in place. Careful not to break the glass.



56.1A

11.2 CARE OF GLASS

DO NOT CLEAN GLASS WHEN HOT! DO NOT USE ABRASIVE CLEANERS TO CLEAN GLASS.

Buff lightly with a clean dry soft cloth. Clean both sides of the glass after the first 10 hours of operation with a recommended fireplace glass cleaner. Thereafter clean as required. If the glass is not kept clean permanent discoloration and / or blemishes may result.

⚠ WARNING

HOT GLASS WILL CAUSE BURNS.

DO NOT TOUCH GLASS UNTIL COOLED.

NEVER ALLOW CHILDREN TO TOUCH GLASS.

5.1

12.0 REPLACEMENTS

⚠ WARNING

FAILURE TO POSITION THE PARTS IN ACCORDANCE WITH THIS MANUAL OR FAILURE TO USE ONLY PARTS SPECIFICALLY APPROVED WITH THIS APPLIANCE MAY RESULT IN PROPERTY DAMAGE OR PERSONAL INJURY.

**** THIS IS A FAST ACTING THERMOCOUPLE. IT IS AN INTEGRAL SAFETY COMPONENT. REPLACE ONLY WITH A FAST ACTING THERMOCOUPLE SUPPLIED BY WOLF STEEL LTD.**

Contact your dealer or the factory for questions concerning prices and policies on replacement parts. Normally all parts can be ordered through your Authorized dealer / distributor.

FOR WARRANTY REPLACEMENT PARTS, A PHOTOCOPY OF THE ORIGINAL INVOICE WILL BE REQUIRED TO HONOUR THE CLAIM.

When ordering replacement parts always give the following information:

- Model & Serial Number of appliance
- Installation date of appliance
- Part number
- Description of part
- Finish

41.2

COMMON COMPONENTS

REF NO.	PART NO.	DESCRIPTION
1*	W225-0058	BLACK DOOR FRAME
2	W357-0001	PIEZO IGNITER
3	W680-0004	THERMOPILE
4	W680-0005	THERMOCOUPLE **
5	W010-0800	PROPANE GAS PILOT ASSEMBLY
5	W010-0801	NATURAL GAS PILOT ASSEMBLY
6	W455-0069	NATURAL GAS PILOT INJECTOR
6	W455-0068	PROPANE GAS PILOT INJECTOR
7	W725-0025	NATURAL GAS VALVE
7	W725-0026	PROPANE GAS VALVE
8*	W385-0334	NAPOLEON LOGO
9*	W750-0112	20FT OF WIRE
10*	W010-0538	FLUE CAP C/W GASKET
11	W010-0539	FLUE PIPE ASSEMBLY C/W GASKET
12	W010-0764	PAN BURNER
13	GL-667	LOG SET
14*	W361-0016	GLOWING EMBERS
15*	W550-0001	CHARCOAL EMBERS
16	W135-0378	REAR LOG
17	W135-0381	LEFT LOG
18	W135-0382	FRONT RIGHT LOG
19	W135-0380	LEFT CROSSOVER LOG
20	W135-0383	CHARCOAL STRIP
21	W135-0379	RIGHT CROSSOVER LOG
22	W010-0454	GLASS C/W GASKET
23	W010-0516	BLACK DOOR C/W GLASS
24*	W290-0115	GASKET, VALVE TRAIN

COMMON FLEXIBLE VENT KITS

REF NO.	PART NO.	DESCRIPTION
GD220(5FT)		
25*	W010-0397	4" FLEXIBLE VENT PIPE - (5 FT) C/W SPACERS
26*	W410-0017	7" FLEXIBLE VENT PIPE - (5 FT)
GD330 (10 FT)		
27*	W410-0018	7" FLEXIBLE VENT PIPE -(10 FT)
28*	W010-0300	4" FLEXIBLE VENT PIPE -(10 FT) C/W SPACERS
29*	W010-0370	WALL SUPPORT ASSEMBLY

COMMON TERMINAL KITS

REF NO.	PART NO.	DESCRIPTION
30	GD-201	PERISCOPE
31	GD-222	WALL TERMINAL KIT

COMMON ROOF TERMINAL KITS

REF NO.	PART NO.	DESCRIPTION
GD-110 - 1/12 TO 7/12 PITCH		
32	W670-0006	AIR TERMINAL
33	W490-0073	4/7 INNER/OUTER SLEEVE
34	W010-0567	ROOF SUPPORT
35	W263-0054	ROOF FLASHING
36	W170-0063	STORM COLLAR
GD-111 - 8/12 TO 12/12 PITCH		
32	W670-0006	AIR TERMINAL
33	W490-0073	4/7 INNER/OUTER SLEEVE
34	W010-0567	ROOF SUPPORT
35	W263-0055	ROOF FLASHING
36	W170-0063	STORM COLLAR
GD-112 - FLAT ROOF		
32	W670-0006	AIR TERMINAL
33	W490-0073	4/7 INNER/OUTER SLEEVE
34	W010-0567	ROOF SUPPORT
35	W263-0056	ROOF FLASHING
36	W170-0063	STORM COLLAR

COMMON ACCESSORIES

REF NO.	PART NO.	DESCRIPTION
37*	W175-0001	4" COUPLER
38*	W175-0013	7" COUPLER
39	L36K	LOUVRE KIT - UPPER & LOWER - BLACK
39	L36AB	LOUVRE KIT - ANTIQUE BRASS
39	L36PB	LOUVRE KIT - POLISHED BRASS
39	L36SS	LOUVRE KIT - BRUSHED STAINLESS STEEL
40*	W690-0001	MILLIVOLT THERMOSTAT
41*	W660-0011	REMOTE CONTROL - ADVANTAGE PLUS
42*	W500-0096	FIRESTOP SPACER
43*	W500-0103	TERMINAL EXTENSION PLATE
44	GD-301	HEAT GUARD
45*	W10-0370	WALL SUPPORT ASSEMBLY
46*	W660-0013	MODULATING REMOTE
47*	W175-0053	DURA-VENT ZERO CLEARANCE ADAPTOR
48*	W361-0016	GLOWING EMBERS

COMMON ACCESSORIES

REF NO.	PART NO.	DESCRIPTION
49	VS47KT	VENT PIPE SHIELD
50	GZ550-1KT	BLOWER KIT
51*	GD36	THERMOSTATIC SENSOR CONTROL KIT FOR USE WITH GD65 ONLY
52	HOIK-3	HERITAGE ORNAMENTAL INSETS - BLACK
52	HOIG-3	HERITAGE ORNAMENTAL INSETS - GOLD PLATED
53*	DK36-N	DOOR KIT, NORTHERN -BLACK
53*	DK36-NPW	DOOR KIT, NORTHERN - PEWTER
54	DK36-R	DOOR KIT, RECTANGULAR - BLACK
55	DK36-A	DOOR KIT, ARCHED - BLACK
56	DK36-W	DOOR KIT, WEBBED - BLACK
56	DK36-WG	DOOR KIT, WEBBED - GOLD PLATED
57	GA-566	HOT AIR KIT
58	GA-72	HOT AIR EXHAUST KIT
59	GA-70	EXTENSION KIT 5FT
60*	RP-KT	RESTRICTOR PLATE KIT
61*	W573-0002	HIGH TEMPERATURE SEALANT
62*	W573-0007	HIGH TEMPERATURE SEALANT
63*	RAK36	ROCK ADAPTOR KIT
64*	MKRM	MEDIA KIT, MULTI-COLOURED RIVER ROCKS
64*	MKRY	MEDIA KIT, GREY RIVER ROCKS

COMPONENTS

REF NO.	GD36	BGD36	DESCRIPTION
65	W456-0042 #42	W456-0047 #47	NATURAL GAS ORIFICE
65	W456-0054 #54	W456-0056 #56	PROPANE GAS ORIFICE
66*	W361-0014	———	VERMICULITE
67*	W010-1777	W010-1774	FIRESTOP SPACER

ACCESSORIES

REF NO.	GD36	BGD36	DESCRIPTION
68*	W175-0158	W175-0159	CONVERSION KIT - NG TO LP
69*	W175-0163	W175-0164	CONVERSION KIT - LP TO NG
70	SK36-R	———	SCREEN KIT (RECTANGULAR)
71	SK36-A	———	SCREEN KIT (ARCHED)

13.0 TROUBLESHOOTING

⚠ WARNING

ALWAYS LIGHT THE PILOT WHETHER FOR THE FIRST TIME OR IF THE GAS SUPPLY HAS RAN OUT, WITH THE GLASS DOOR OPEN OR REMOVED.

TURN OFF THE GAS AND ELECTRICAL POWER BEFORE SERVICING THE APPLIANCE.

APPLIANCE MAY BE HOT, DO NOT SERVICE UNTIL APPLIANCE HAS COOLED.

DO NOT USE ABRASIVE CLEANERS.

SYMPTOM	PROBLEM	TEST SOLUTION
Main burner goes out; pilot stays on.	Pilot flame is not large enough or not engulfing the thermopile.	- Turn up the pilot flame. - Replace pilot assembly.
	Thermopile shorting.	- Clean thermopile connection to the valve. Reconnect. - Replace thermopile / valve.
	Remote wall switch wire is too long; too much resistance in the system.	- Shorten wire to correct length or wire gauge.
	Faulty thermostat or switch.	- Replace.
Main burner goes out; pilot goes out.	Refer to “MAIN BURNER GOES OUT; PILOT STAYS ON”	
	Vent is blocked	- Check for vent blockage.
	Vent is re-circulating	- Check joint seals and installation
	Flexible vent has become disconnected from appliance.	- Re-attach to appliance. - Cap was not replaced.
Pilot goes out when the gas knob is released. **The gas valve has an interlock device which will not allow the pilot burner to be lit until the thermocouple has cooled. Allow approximately 60 seconds for the thermocouple to cool.**	System is not correctly purged	- Purge the gas line.
	Out of propane gas.	- Fill the tank.
	Pilot flame is not large enough.	- Turn up the pilot flame.
	Pilot flame is not engulfing the thermocouple	- Gently twist the pilot head to improve the flame pattern around the thermocouple.
	Thermocouple shorting / faulty.	- Loosen and tighten thermocouple. - Clean thermocouple and valve connection. - Replace thermocouple. - Replace valve.
	Faulty valve.	- Replace.
Pilot burning; no gas to main burner; gas knob is on ‘HI’; wall switch / thermostat is on.	Thermostat or switch is defective	- Connect a jumper wire across the wall switch terminals; if main burner lights, replace switch / thermostat.
	Wall switch wiring is defective.	- Disconnect the switch wires & connect a jumper wire across terminals 1 & 3; if the main burner lights, check the wires for defects and/or replace wires.
	Main burner orifice is plugged.	- Remove stoppage in orifice.
	Faulty valve.	- Replace.
Pilot goes out while standing; Main burner is in ‘OFF’ position.	Gas piping is undersized.	- Turn on all gas appliances and see if pilot flame flutters, diminishes or extinguishes, especially when main burner ignites. Monitor appliance supply working pressure. - Check if supply piping size is to code. Correct all undersized piping.
Main burner flame is a blue, lazy, transparent flame.	Blockage in vent.	- Remove blockage. In really cold conditions, ice buildup may occur on the terminal and should be removed as required. To minimize this from happening again, it is recommended that the vent lengths that pass through unheated spaces (attics, garages, crawl spaces) be wrapped with an insulated mylar sleeve. Prevent sleeve from sagging. Contact your local authorized dealer for more information.

SYMPTOM	PROBLEM		TEST SOLUTION
Pilot will not light.  	No spark at pilot burner.	-	Check if pilot can be lit by a match. - Check that the wire is connected to the push button igniter. - Check if the push button igniter needs tightening. - Replace the wire if the wire insulation is broken or frayed. - Replace the electrode if the ceramic insulator is cracked or broken. - Replace the push button ignitor
	Out of propane gas.	-	Fill the tank.
	Spark gap is incorrect.	-	Spark gap should be 0.150” to 0.175” (5/32” to 11/64” approx.) from the electrode tip and the pilot burner. To ensure proper electrode location, tighten securing nut (finger tight plus 1/4 turn).
	No gas at the pilot burner.	-	Check that the manual valve is turned on. - Check the pilot orifice for blockage. - Replace the valve. - Call the gas distributor.
Flames are consistently too large or too small. Carboning occurs.  	Unit is over-fired or underfired.	-	Check pressure readings: - Inlet pressure can be checked by turning screw (A) counter-clockwise 2 or 3 turns and then placing pressure gauge tubing over the test point. Gauge should read 7” (minimum 4.5”) water column for natural gas or 13” (minimum 11”) water column for propane. Check with main burner is operating on ‘HI’. - Outlet pressure can be checked the same as above using screw (B). Gauge should read 3.5” water column for natural gas or 10” water column for propane. Check that main burner is operating on ‘HI’. - AFTER TAKING PRESSURE READINGS, BE SURE TO TURN SCREWS CLOCKWISE FIRMLY TO RESEAL. DO NOT OVER TORQUE. - Leak test with a soap and water solution.
Flames are very aggressive.	Door is ajar.	-	Ensure the mechanical means of securing the door is providing a tight seal.
Carbon is being deposited on glass, logs or combustion chamber surfaces.	Air shutter has become blocked.	-	Ensure air shutter opening is free of lint or other obstructions.
	Flame is impinging on the logs or combustion chamber.	-	Check that the logs are correctly positioned. - Open air shutter to increase the primary air. - Check the input rate: check the manifold pressure and orifice size as specified by the rating plate values. - Check that the door gasketing is not broken or missing and that the seal is tight. - Check that both vent liners are free of holes and well sealed at all joints. - Check that minimum rise per foot has been adhered to for any horizontal venting.
White / grey film forms.	Sulphur from fuel is being deposited on glass, logs or combustion chamber surfaces.	-	Clean the glass with a recommended gas appliance glass cleaner. - DO NOT CLEAN GLASS WHEN HOT. - If deposits are not cleaned off regularly, the glass may become permanently marked.
Exhaust fumes smelled in room, headaches.	Appliance is spilling.	-	Ensure exhaust bracket gasket seal. - Check door seal and relief flap seal. - Check for chimney blockage. - Check that chimney is installed to building code. - Room is in negative pressure; increase fresh air supply. - Check cap gasket on the flue pipe assembly.
Remote wall switch is in ’OFF’ position; main burner comes on when gas knob is turned to ‘ON’ position.	Wall switch is mounted upside down.	-	Reverse.
	Remote wall switch is grounding.	-	Replace.
	Remote wall switch wire is grounding.	-	Check for ground (short); repair ground or replace wire.
	Faulty valve.	-	Replace.

15.0 SERVICE HISTORY

Appliance Service History
This heater must be serviced annually depending on usage.
