

INSTALLATIONINSTRUCTIONS

RETAIN THESE INSTRUCTIONS FOR FUTURE REFERENCE

This appliance may be installed as an OEM installation in a manufactured home (USA only) or Manufactured Home and must be installed in accordance with the manufacturer's instructions and the manufactured home construction and safety standard, *Title 24 CPF, Part 3280* or Standard for *Installation in Manufactured Homes, CAN/CSA Z240 MH.* This appliance is only for use with the type(s) of gas indicated on the rating plate. A conversion kit is supplied with the appliance.

In the Commonwealth of Massachusetts:

- Installation must be performed by a licensed plumber or gas fitter;
- See Table of Contents for location of additional Commonwealth of Massachusetts requirements.

WARNING: IF THE INFORMATION IN THIS MANUAL IS NOT FOLLOWED EXACTLY, A FIRE OR EXPLO-SION MAY RESULT CAUSING PROPERTY DAMAGE, PERSONAL INJURY OR LOSS OF LIFE.

FOR YOUR SAFETY: Do not store or use gasoline or other flammables or liquids in the vicinity of this or any other appliance.

FOR YOUR SAFETY: What to do if you smell gas:

- DO NOT light any appliance.
- DO NOT touch any electrical switches.
- Do not use any phone in your building.
- Immediately call your gas supplier from a neighbor's phone. Follow your gas suppliers instructions.
- If your gas supplier cannot be reached, call the fire department.

Installation and service must be performed by a qualified installer, service agency or the gas supplier.

A French manual is available upon request. Order P/N 700,041CF

Ce manuel d'installation est disponible en francais, simplement en faire la demande. Numéro de la pièce 700,041CF.

AVERTISSEMENT: ASSUREZ-VOUS DE BIEN SUIVRE LES INSTRUCTIONS DONNÉ DANS CETTE NOTICE POUR RÉDUIRE AU MINIMUM LE RISQUE D'INCENDIE OU POUR ÉVITER TOUT DOMMAGE MATÉRIEL, TOUTE BLESSURE OU LA MORT.

POUR VOTRE SÉCURITÉ: Ne pas entreposer ni utiliser d'essence ni d'autre vapeurs ou liquides inflammables dans le voisinage de cet appareil ou de tout autre appareil.

POUR VOTRE SÉCURITÉ: Que faire si vous sentez une odeur de gaz:

- Ne pas tenter d'allumer d'appareil.
- Ne touchez à aucun interrupteur. Ne pas vous servir des téléphones se trouvant dans le batiment où vous vous trouvez.
- Evacuez la piéce, le bâtiment ou la zone.
- Appelez immédiatement votre fournisseur de gaz depuis un voisin. Suivez les instructions du fournisseur.
- Si vous ne pouvez rejoindre le fournisseur de gaz, appelez le service dos incendies.

L'installation et service doit être exécuté par un qualifié installeur, agence de service ou le fournisseur de gaz.

This installation manual will help you obtain a safe, efficient, dependable installation for your appliance and vent system.

Please read and understand these instructions before beginning your installation.

The *Millivolt* appliances have a millivolt gas control valve with piezo ignition system which provides safe, efficient operation. If any optional accessories that will require electrical power are to be installed, the electrical power must be provided at the time of appliance installation.

The *Electronic* appliances have an electronic intermittent pilot ignition system which provides safe, efficient operation. External electrical power is required to operate these appliances.

We recommend that our gas hearth products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute[®] (NFI) as NFI Gas Specialists.

PACKAGING

The assembled vented gas fireplace heater is packaged with:

- 1 One log set located in firebox area.
- 2 One envelope containing the literature package which consists of the homeowner's manual, installation instructions, and warranty; envelope is located in the control compartment.
- 3 One vent restrictor to be applied as shown on *Page 13*; restrictor is taped to envelope.
- 4 One hood located behind the top panel.
- 5 One bag of decorative volcanic stone located in the control compartment.
- 6 One bag of glowing embers located in the control compartment. Introduction

These vented gas fireplace heaters are sealed combustion, air circulating gas fireplaces designed for residential applications.

Approved Vent Components - These fireplaces are designed, tested and listed for operation and installation with, the following vent components only:

- <u>Secure Vent™</u> Direct Vent System Components,
- <u>Secure Flex™</u> Flexible Vent Components manufactured by Security Chimneys International and
- <u>Z-FLEX™</u> Model GA Venting Systems listed to UL1777 and ULCS635 manufactured by Flexmaster Canada Limited.

These approved vent system components are labeled for identification. DO NOT use any other manufacturer's vent components with these appliances. Use only the correct size venting (4-1/2" inner & 7-1/2" outer).

These appliances comply with National Safety Standards and are tested and listed by OMNI-Test Laboratories, Inc. (Report No. 116-F-05-5) to ANSI Z21.88b-2003 (in Canada, CSA-2.33b-2003), and CAN/CGA-2.17-M91 in both USA and Canada, as vented gas fireplace heaters.

Both millivolt and electronic versions of these appliances are listed by OMNI-Test Laboratories for installation in bedrooms and Manufactured Homes.

Manufactured Homes -

See *Manufactured Home Requirements* on *Page 7* for additional information.

🛕 WARNING

Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. Refer to this manual. For assistance or additional information consult a qualified installer, service agency or the gas supplier.

NOTE: DIAGRAMS & ILLUSTRATIONS ARE NOT TO SCALE.

This appliance is only for use with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gases, unless a certified kit is used.

Cet appareil doit être utilisé uniquement avec les types de gaz indiqués sur la plaque signalétique. Ne pas l'utiliser avec d'autres gaz sauf si un kit de conversion certifié est installé.

Misc. Codes / Standards -

Installation must conform to local codes. In the absence of local codes, installation must comply with the current National Fuel Gas Code, ANSI Z223.1. (In Canada, the current CAN-1 B149 installation code).

The appliance, when installed, must be electrically grounded & wired in accordance with local codes or, in the absence of local codes, with the National Electrical Code, ANSI / NFPA 70-latest edition, or the Canadian Electrical Code, CSA C22.1 - latest edition.

GENERAL INFORMATION

Note: Installation and repair should be performed by a qualified service person. The appliance should be inspected annually by a qualified professional service technician. More frequent inspections and cleanings may be required due to excessive from carpeting, bedding material, etc.

S'assurer que le brùleur et le compartiment des commandes sont propres. Voir les instructions d'installation et d'utilisation qui accompagnent l'appareil.

Provide adequate clearances around air openings and adequate accessibility clearance for service and proper operation. Never obstruct the front openings of the appliance.

These appliances are designed to operate on natural or propane gas only. To operate on an alternate gas (i.e. converting a natural gas model to use propane gas) a field converion is necessary (see *Pages 34 to 36*). The use of any other fuels or combination of fuels will degrade the performance of this system and may be dangerous.

These fireplaces are designed as supplemental heaters. Therefore, it is advisable to have an alternate heat source when installed in a dwelling.

Millivolt Models - The millivolt appliances are manually controlled and feature a spark igniter (piezo) that allows the appliance's pilot gas to be lit without the use of matches or batteries. This system provides continued service in the event of a power outage.

Millivolt models come standard with a manually-modulated gas valve; flame appearance and heat output can be controlled at the gas valve. The BTU Input for these appliances is shown in *Tables 1 & 2*.

Input (BTU) Manually-Modulated Gas Valves (millivolt models)		
NATURAL GAS		
Models Input Rate (BTU / HR)		
SDDV-35NM	27,000 high 21,000 low	
SDDV-40NM 30,000 high 23,500 low		
Table 1		

Input (BTU) Manually-Modulated Gas Valves (millivolt models)		
* PR	OPANE GAS	
Models Input Rate (BTU / HR)		
SDDV-35PM 27,000 high 20,700 low		
SDDV-40PM 30,000 high 23,500 low		
Table 2 * If field converted - see Pages 34-36		

Electronic Models

Electronic models have a fixed rate gas valve. Input of electronic models is shown in *Table 3.*

Electronic Models with Fixed Rate Gas Valve		
Natural and *Propane Gas		
Model Series Input Rate (BTU / HR)		
SDDV-35 27,000		
SDDV-40 30,000		
Table 3	* if field converted	

Gas Pressure - All Models

Tables 4, 5 and 6 show the appliances' gas pressure requirements:

Inlet Gas Supply Pressure (all models)			
Fuel # Minimum Maximum			
Natural Gas	5.0" WC (1.24 kPa)	10.5" WC (2.61 kPa)	
Propane 11.0" WC 13.0" WC (2.74 kPa) (3.23 kPa)			
Table 4			

Manifold Gas Supply Pressure (millivolt models)		
Fuel #	Low	High
Natural Gas	(Lo) 2.2" WC (.55 kPa)	(Hi) 3.5" WC (.87 kPa)
Propane	(Lo) 6.3" WC (1.57 kPa)	(Hi) 10.0" WC (2.49 kPa)
Table 5		

Manifold Gas Supply Pressure (electronic models)		
Fuel # Max. Manifold Pressure		
Natural Gas	(Hi) 3.5" WC (.87 kPa)	
Propane (Hi) 10.0" WC (2.49 kPa)		
Table 6		

Test gauge connections are provided on the front of the millivolt gas control valve, identified IN for the inlet and OUT for the manifold side. A 1/8" NPT Test gauge connection is provided at the inlet and outlet side of the electronic gas control valve.

These appliances must be isolated from the gas supply piping system (*by closing their individual manual shut-off valve*) during any pressure testing of the gas supply piping system at test pressures equal to or **less than** 1/2 psig (3.5 kPa).

These appliances and their individual shut-off valves *must be disconnected* from the gas supply piping system during any pressure testing of that system at pressures **greater than** 1/2 psig (3.5 kPa).

Orifice Sizes - Sea Level to High Altitude (All Models)

These appliances are tested and approved for installation at elevations of 0-4500 feet (0-1372 meters) above sea level using the standard burner orifice sizes (marked with an "*" in *Table 7*). For elevations above 4500 feet, contact your gas supplier or qualified service technician . Install the appliance according to the regulations of the local authorities having jurisdiction and, in the USA, the National Fuel Gas Code NFPA 54 / ANSI Z223.1 - latest edition or, in Canada, the CAN1-B149.1 and .2 codes - latest edition.

Burner Orifice Sizes Elevation 0-4500 feet (0-1372 meters)			
Model Series	Natural Gas drill size (inches)	Propane Gas drill size (inches)	
SDDV-35	#40 (.098") * 69L96 ●	#53 (.0595") * 39L10 ●	
SDDV-40 #36 (.1065") * 18L40 ● #52 (.0635") * LB-55874D ●			
* Standard size installed at factory • Part /Cat. Number Tahla 7			

Gas Valve Diagrams

See *Figure 1* for Millivolt models and *Figure 2* For Electronic Models.

New York City, New York (MEA)

Installation of these fireplaces are approved for installation in New York City in the US state of New York. *Note:* The following requirements reference various Massachusetts and national codes not contained in this document.

Requirements for the Commonwealth of Massachusetts

For all side wall horizontally vented gas fueled equipment installed in every dwelling, building or structure used in whole or in part for residential purposes, including those owned or operated by the Commonwealth and where the side wall exhaust vent termination is less than seven (7) feet above finished grade in the area of the venting, including but not limited to decks and porches, the following requirements shall be satisfied:

Installation Of Carbon Monoxide Detectors

At the time of installation of the side wall horizontal vented gas fueled equipment, the installing plumber or gasfitter shall observe that a hard wired carbon monoxide detector with an alarm and battery back-up is installed on the floor level where the gas equipment is to be installed. In addition, the installing plumber or gasfitter shall observe that a battery operated or hard wired carbon monoxide detector with an alarm is installed on each additional level of the dwelling, building or structure served by the side wall horizontal vented gas fueled equipment. It shall be the responsibility of the property owner to secure the services of qualified licensed professionals for the installation of hard wired carbon monoxide detectors.

In the event that the side wall horizontally vented gas fueled equipment is installed in a crawl space or an attic, the hard wired carbon monoxide detector with alarm and battery back-up may be installed on the next adjacent floor level.

In the event that the requirements of this subdivision can not be met at the time of completion of installation, the owner shall have a period of thirty (30) days to comply with the above requirements; provided, however, that during said thirty (30) day period, a battery operated carbon monoxide detector with an alarm shall be installed.

Approved Carbon Monoxide Detectors

Each carbon monoxide detector as required in accordance with the above provisions shall comply with NFPA 720 and be ANSI/UL 2034 listed and IAS certified.

Signage

A metal or plastic identification plate shall be permanently mounted to the exterior of the building at a minimum height of eight (8) feet above grade directly in line with the exhaust vent terminal for the horizontally vented gas fueled heating appliance or equipment. The sign shall read, in print size no less than one-half (1/2) inch in size, "GAS VENT DIRECTLY BELOW. KEEP CLEAR OF ALL OBSTRUCTIONS."

Inspection

The state or local gas inspector of the side wall horizontally vented gas fueled equipment shall not approve the installation unless, upon inspection, the inspector observes carbon monoxide detectors and signage installed in accordance with the provisions of 248 CMR 5.08(2)(a)1 through 4.

Exemptions

The following equipment is exempt from 248 CMR 5.08(2)(a)1 through 4:

- The equipment listed in Chapter 10 entitled "Equipment Not Required To Be Vented" in the most current edition of NFPA 54 as adopted by the Board; and
- Product Approved side wall horizontally vented gas fueled equipment installed in a room or structure separate from the dwelling, building or structure used in whole or in part for residential purposes.

MANUFACTURER REQUIREMENTS

Gas Equipment Venting System Provided

When the manufacturer of Product Approved side wall horizontally vented gas equipment provides a venting system design or venting system components with the equipment, the instructions provided by the manufacturer for installation of the equipment and the venting system shall include:

- Detailed instructions for the installation of the venting system design or the venting system components; and
- A complete parts list for the venting system design or venting system.

Gas Equipment Venting System NOT Provided

When the manufacturer of a Product Approved side wall horizontally vented gas fueled equipment does not provide the parts for venting the flue gases, but identifies "special venting systems", the following requirements shall be satisfied by the manufacturer:

- The referenced "special venting system" instructions shall be included with the appliance or equipment installation instructions; and
- The "special venting systems" shall be Product Approved by the Board, and the instructions for that system shall include a parts list and detailed installation instructions.

A copy of all installation instructions for all Product Approved side wall horizontally vented gas fueled equipment, all venting instructions, all parts lists for venting instructions, and/or all venting design instructions shall remain with the appliance or equipment at the completion of the installation.

- Installation and repair must be done by a plumber or gas fitter licensed in the Commonwealth of Massachusetts.
- The flexible gas line connector used shall not exceed 36 inches (92 centimeters) in length.
- The individual manual shut-off must be a T-handle type valve.

SAFETY & WARNIING INFORMATION

A WARNING

If the information in this manual is not follwed exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

A WARNING

This appliance is only for use with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gases, unless a certified kit is used.

WARNING

These fireplaces are vented heaters. Do not burn wood or other material in these appliances.

Cet appareil doit être utilisé uniquement avec les types de gaz indiqués sur la plaque signalétique. Ne pas l'utiliser avec d'autres gaz sauf si un kit de conversion certifié est installé.

IMPORTANT

It is imperative that the control compartment, burners and circulating air passage ways of the appliance be kept clean. See Maintenance instructions in Homeowner's Manual.

A WARNING

This appliance may only be fitted with doors certified for use with the appliance.

A WARNING

Children and adults should be alerted to the hazards of high surface temperatures. Use caution around the appliance to avoid burns or clothing ignition. Young children should be carefully supervised when they are in the same room as the appliance.

Note: An Optional Screen Door or Screen Panel forthe glass is available (see Homeowners Manual for ordering information).

AVERTISSEMENT

Surveiller les enfants. Garder les vêtements, les meubles, l'essence ou autres liquides à vapeur inflammables lin de l'appareil.

A WARNING

Do not place clothing or other flammable materials on or near this appliance.

AVERTISSEMENT

Pour utilisation uniquement avec les portes en verre certifiêes avec l'appareil.

A WARNING

Carbon monoxide poisoning: early signs of carbon monoxide poisoning are similar to the flu with headaches, dizziness and/or nausea. If you have these signs, obtain fresh air immediately. Turn off the gas supply to the appliance and have it serviced by a qualified professional, as it may not be operating correctly.

WARNING

Do not use these appliances if any part has been under water. Immediately call a qualified, professional service technician to inspect the appliances and to replace any parts of the control system and any gas controls which have been under water.

A WARNING

Failure to comply with the installation and operating instructions provided in this document will result in an improperly installed and operating appliance, voiding its warranty. Any change to this appliance and/or its operating controls is dangerous. Improper installation or use of this appliance can cause serious injury or death from fire, burns, explosion or carbon monoxide poisoning.

A WARNING

Do not attempt to alter or modify the construction of the appliance or its components. Any modification or alteration may void the warranty, certification and listings of this unit.

AVERTISSEMENT

Ne pas se servir de cet appareil s'il a été plongé dans l'eau, complètement ou en partie. Appeler un technicien qualifié pour inspecter l'appareil et remplacer toute partie du système de contrôle et toute commande qui ont été plongés dans l'lau.

A IMPORTANT

These appliances must not be connected to a chimney or flue serving a separate solid fuel burning appliance.

COLD CLIMATE INSULATION

For cold climate installations, seal all cracks around the appliance with noncombustible material and wherever cold air could enter the room. It is especially important to insulate outside chase cavity between studs and under floor on which the appliance rests, if floor is above ground level. Gas line holes and other openings should be caulked or stuffed with unfaced fiberglass insulation. If the fireplace is being installed on a cement slab, in cold climates, a sheet of plywood or other raised platform can be placed underneath to prevent conducting cold up into the room. It also helps to sheetrock inside surfaces and tape for maximum air tightness and caulk firestops.

LOCATION

In selecting the location, the aesthetic and functional use of the appliance are primary concerns. However, vent system routing to the exterior and access to the fuel supply are also important. Consideration should be given to traffic ways, furniture, draperies, etc., due to elevated surface temperatures (*Figure 3*). The location should also be free of electrical, plumbing or other heating/air conditioning ducting.

These direct vent appliances are uniquely suited for installations requiring a utility shelf positioned directly above the fireplace. Utility shelves like these are commonly used for locating television sets and decorative plants. Be aware that this is a heat producing appliance. Objects placed above the unit are exposed to elevated temperatures.

To provide for the lowest possible shelf surface use the alternate rear vent outlet with attached venting routed in a way to minimize obstructions to the use of the space above the appliance. Do not insulate the space between the appliance and the area above it. See *Figure 8*. The minimum height from the base of the appliance to the underside of combustible materials used to construct a utility shelf in this fashion is shown in the Table in *Figure 8*.

The appliance should be mounted on a fully supported base extending the full width and depth of the unit. The appliance may be located on or near conventional construction materials. However, if installed on combustible materials, such as carpeting, vinyl tile, etc., a metal or wood barrier covering the entire bottom surface must be used.

MANUFACTURED HOME REQUIREMENTS

This appliance may be installed in an aftermarket permanently located, manufactured home (USA only) or mobile home, where not prohibited by local codes.

Cet appareil peut être installé dans un maison préfabriquée (É.-U. seulement) ou mobile déjà installée à demeure si les réglements locaux le permettent.

Manufactured Home installations must be installed in accordance with these instructions and the following standards / codes:

- Manufactured Home Construction and Safety Standard Title 24 CFR, Part 3280, or the current Standard for Fire Safety Criteria for Manufactured Home Installations, Sites and Communities ANSI / NFPA 501A in the USA, and CAN / CSA Z240 MH Mobile Home Standard in Canada
- (when applicable) The American National Standard for Manufactured Homes (NCSBCS / ANSI A225.1 - latest edition).

A CAUTIONS

Ensure that the cross members are not cut or weakened during installation. The structural integrity of the manufactured home floor, wall, and ceiling/roof must be maintained.

This appliance must be grounded to the chassis of the manufactured home in accordance with local codes or in the absence of local codes, with the National Electrical Code ANSI / NFPA 70 - latest edition or the Canadian Electrical Code CSAC22.1-latest edition.

VENT TERMINATION CLEARANCES

These instructions should be used as a guideline and do not supersede local codes in any way. Install vent according to local codes, these instructions, the current National Fuel Gas Code (ANSI-Z223.1) in the USA or the current standards of CAN/CGA-B149.1 and -B149.2 in Canada.

Terminate multiple vent terminations according to the installation codes listed above.

Terminate single vent caps relative to building components according to *Figure 4*.

Horizontal Vent Termination Clearances

The horizontal vent termination must have a minimum of 3" (76 mm) clearance to any overhead combustible projection of 2-1/2" (64 mm) or less. See *Figure 5*. For projections exceeding 2-1/2" (64 mm), see *Figure 6*. For additional vent location restrictions refer to *Figure 6 on Page 8*.

The vent / air intake termination clearances above the high side of an angled roof is as shown in the following chart:

Termination Heights For Vents Above Flat Or Sloped Roofs Ref. NFPA 54 / ANSI Z223.1, 7.6		
Roof Pitch	* Feet	* Meters
Flat to 6/12	1.0	0.3
6/12 to 7/12	1.25	0.38
7/12 to 8/12	1.5	0.46
8/12 to 9/12	2.0	0.61
9/12 to 10/12	2.5	0.76
10/12 to 11/12	3.25	0.99
11/12 to 12/12	4.0	1.22
12/12 to 14/12	5.0	1.52
14/12 to 16/12	6.0	1.83
16/12 to 18/12	7.0	2.13
18/12 to 20/12	7.5	2.29
20/12 to 21/12	8.0	2.44
Figuro A

‡ A vent shall not terminate directly above a sidewalk or paved driveway which is located between two single family dwellings and serves both dwellings.				
*‡ Only permitted if veranda, porch, deck or balcony is fully open on a minimum 2 sides beneath the floor.				

8

MINIMUM CLEARANCES TO COMBUSTIBLES

Hearth Extension - A hearth extension is not required with this appliance. If a hearth extension is used, do not block the lower control compartment door. Any hearth extension used is for appearance only and does not have to conform to standard hearth extension installation requirements.

Wall Finishes / Surrounds / Mantels

Note: Combustible wall finish materials and/or surround materials must not be allowed to encroach the area defined by the appliance front face (black sheet metal). **Neverallow combustible materials to be positioned in front of or overlapping the appliance front face.** See Figure 56 on Page 31.

Non-combustible materials, such as surrounds and other appliance trim, may be installed on the appliance front face with these exceptions: they must not cover any portion of the removable glass panel or louvers.

Vertical installation clearances to combustible mantels vary according to the depth of the mantel. See *Figure 7*. Mantels constructed of non-combustible materials may be installed at any height above the appliance opening; however, do not allow anything to hang below the hood.

Appliance and Vent Clearances

The appliance is approved with zero clearance to combustible materials on all sides (as detailed in *Table 8*), with the following exception: When the unit is installed with one side flush with a wall, the wall on the other side of the unit must not extend beyond the front edge of the unit. In addition, when the unit is recessed, the side walls surrounding the unit must not extend beyond the front edge of the unit. See *Figure 3 on Page 6*.

MINIMUM CLEARANCES Inches (millimeters)

*Note: 3 in. (75 mm) above any horizontal/inclined vent component. **Note: See Page 10, Step 1 for clearance

requirements to the nailing flange located at each side of the unit and any screw heads adjacent to it.

NOTE: DIAGRAMS & ILLUSTRATIONS ARE NOT TO SCALE.

DETAILED INSTALLATION STEPS

The appliance is shipped with all gas controls and components installed and pre-wired. Remove the shipping carton, exposing the front glass door. Remove the top and bottom louvered control panel per instructions on **Page 27** (see *Control Compartment Access / Louver Panel Instructions)*. **Remove the cardboard from underneath the pressure relief plates**, in area **behind top louver panel** (see Figure 10). Open the two latches (located under the firebox floor) securing the glass door. Remove the door by tilting it outward at the bottom and lifting it up. Set the door aside protecting it from inadvertent damage. See Figure 53 on Page 30.

TYPICAL INSTALLATION SEQUENCE

The typical sequence of installation follows, however, each installation is unique resulting in variations to those described.

See the Page numbers references in the following steps for detailed procedures.

- Step 1. (Page 10) Construct the appliance framing. Position the appliance within the framing and secure with nailing brackets.
- Step 2. (*Page 10*) Route gas supply line to appliance location.
- Step 3. (Page 13) Install the vent system and exterior termination.

Step 4. (Page 25) Field Wiring

- a. Millivolt Appliances The operating control switch is factory installed.
- Electronic Appliances Connect 120 VAC electrical power to the appliance receptacle.
- Step 5. (Page 25) Install blower kit (optional equipment).
- Step 6. (Page 26) Make connection to gas supply.
- Step 7. (Page 27) Checkout appliance operation.
- Step 8. (*Page 28)* Install the logs, volcanic stone and glowing embers.
- Step 9. (Page 30) Install glass door frame assembly.
- Step 10. (Page 30) Adjust burner to ensure proper flame appearance.
- Step 11. (Page 31) Install the hood.

Step 1. FRAMING

Frame these appliances as illustrated in *Figure 13 on Page 11*, unless the appliance is to be installed in a corner. See *Figure 14 on Page 12* for corner framing installations. All framing details must allow for a minimum clearance to combustible framing members as shown in *Table 8 on Page 9*.

If the appliance is to be elevated above floor level, a solid continuous platform must be constructed.

Headers may be in direct contact with the appliance top spacers but must not be supported by them or notched to fit around them. All construction above the appliance must be self supporting. **DO NOT** use the appliance for structural support.

The fireplace should be secured to the side framing members using the unit's nailing flanges - one top and bottom on each side of the fireplace front. See *Figure 11.* Use 8d nails or their equivalent.

the firebox wrapper in areas adjacent to the nailing flanges. Frame the opening to the exact dimensions specified in the framing details of this manual.

Figure 11

STEP 2. ROUTING GAS LINE

Route a 1/2" (13 mm) gas line along the inside of the right side framing as shown in *Figure* 12. Gas lines must be routed, constructed and made of materials that are in strict accordance with local codes and regulations. All appliances are factory-equipped with a flexible gas line connector and 1/2 inch shutoff valve. (See Step 6 on Page 26).

Continued on Page 12.

FIREPLACE FRAMING SPECIFICATIONS

Notes:

• Venting requirements for rear vent applications in corner installations, the horizontal vent length "a" to "b," must not exceed 28 inches (711).

*These dimensions occur when one 45 degree elbow is connected directly to the appliance collar.

*In SDDV-35 corner installations, the unit has been moved 1-3/8 in. (35 mm) into the room in order to achieve a minimum of 5 in. (127 mm) in the F dimension.

Figure 14 Corner Framing with Square Termination (SV4.5HT-2)

Proper Sizing of Gas Line

Properly size and route the gas supply line from the supply regulator to the area where the appliance is to be installed per requirements outlined in the National Fuel Gas Code, NFPA 54 - latest edition (USA) or B149 - latest edition (Canada).

Never use galvanized or plastic pipe. Refer to **Table 9** for proper sizing of the gas supply line, if black iron pipe is being used. Gas lines must be routed, constructed and made of materials that are in strict accordance with local codes and regulations. We recommend that a qualified individual such as a plumber or gas fitter be hired to correctly size and route the gas supply line from the fuel supply to the appliance involves numerous considerations of materials, protection, sizing, locations, controls, pressure, sediment, and more. Certainly no one unfamiliar and unqualified should attempt sizing or installing gas piping.

Schedule 40 / Black Iron Pipe Inside Diameter (Inches)					
Schedule 40 PipeNaturalPropaneLength (feet)GasGas					
0-10	1/2	3/8			
10-40	1/2	1/2			
40-100	1/2	1/2			
100-150	3/4	1/2			
150-200 3/4 1/2					
Table 9					

Notes:

- All appliances are factory-equipped with a flexible gas line connector and 1/2 inch shutoff valve (see *Figures 46 & 48*).
- See *Massachusetts Requirements* on *Page 4* for additional requirements for installations in the state of Massachusetts in the USA.
- The gas supply line should Not be connected to the appliance until Step 6 (Page 26).

- A pipe joint compound rated for gas should be used on the threaded joints. Ensure propane resistant compounds are used in propane applications. Be very careful that the pipe compound does not get inside the pipe.
- It is recommended to install a sediment trap in the supply line as close as possible to the appliance (see *Figure 46*). Appliances using Propane should have a sediment trap at the base of the tank.
- Check with local building official for local code requirements (i.e. are below grade penetrations of the gas line allowed?, etc).

IMPORTANT: If propane is used, be aware that if tank size is too small (i.e. under 100-lbs, if this is the only gas appliance in the dwelling. Ref. NPFA 58), there may be loss of pressure, resulting in insufficient fuel delivery (which can result in sooting, severe delayed ignition or other malfunctions). Any damage resulting from an improper installation, such as this, is not covered under the limited warranty.

Step 3. INSTALL THE VENT SYSTEM

General Information

These instructions should be used as a guideline and do not supersede local codes in any way. Install vent according to local codes, these instructions, the current National Fuel Gas Code (ANSI-Z223.1) in the USA or the current standards of CAN/CGA-B149.1 and -B149.2 in Canada.

Use only approved venting components. See Approved Vent Components on Page 2.

These fireplaces must be vented directly to the outside.

The vent system may not service multiple appliances, and must never be connected to a flue serving a solid fuel burning appliance. The vent pipe is tested to be run inside an enclosing wall (such as a chase). There is no requirement for inspection openings in the enclosing wall at any of the joints in the vent pipe.

Preparing the Appliance Vent Collar

Each of the unit's two vent collars are sealed with a cover plate and a seal cap. The cover plate and seal cap must be removed from the cent collar being used. Refer to *Figure 15* for top vent usage and *Figure 16* for rear, and the following steps to prepare the appropriate collar for use.

From the vent collar being used, remove the screw securing the vent seal cap. Twist the cap counterclockwise to disengage it from the vent collar. Remove and discard the seal cap.

When the top vent is being used, remove the lintel cover plate by pushing it back towards the rear of the fireplace by its front flange. It can then be removed by pulling it forward. Loosen the two screws in the keyhole slots of the vent cover plate and remove the remaining two vent cover plate securing screws. Remove and discard the vent cover plate. Reinstall and securely tighten all four cover plate screws. Reinstall the lintel cover plate.

When the rear vent is being used, from inside the firebox, remove the two screws securing the baffle to the rear wall of the firebox, then remove the baffle. Loosen the two screws in the keyhole slots of the cover plate and remove the remaining two cover plate securing screws. Remove and discard the cover plate. Reinstall and securely tighten all four cover plate screws. Re-secure the baffle to the rear wall of the firebox.

A WARNING

Failure to reinstall and securely tighten cover plate screws could result in leakage of flue products into the living space. Vent cover plate and vent seal plate must remain securely installed on unused vent collar. Failure to do so could result in leakage of flue products into living space.

Preparing The Appliance Top Or Rear Vent Outlet

When There Is 3 Feet Or More Of Vertical Venting, install a vent restrictor (provided) in the appliance top or rear flue outlet as shown in *Figures 17a & 17b*. It is held in place by friction, only.

venting components is shown on Pages 32

to 34.

VERTICAL TERMINATION SYSTEMS (ROOF)

Figure 21 (Page 15), and Figures 26 to 30 (Pages 17 and 18) and their associated Vertical Vent Tables illustrate the various vertical venting configurations that are possible for use with these appliances. Secure Vent pipe applications are shown in these Figures; Secure Flex pipe may also be used. A Vertical Vent Table summarizes each system's minimum and maximum vertical and horizontal length values that can be used to design and install the vent components in a variety of applications.

Both these vertical vent systems terminate through the roof. The minimum vent height above the roof and/or adjacent walls is specified in ANSI Z223.1-(latest edition) (In Canada, the current CAN-1 B149 installation code) by major building codes. Always consult your local codes for specific requirements. A general guide to follow is the Gas Vent Rule (refer to *Figure 4* on *Page 7*).

Vertical (Straight) Installation

Determine the number of straight vent sections required. 4-1/2" (114 mm), 10-1/2" (267 mm), 22-1/2" (572 mm), 34-1/2" (876 mm) and 46-1/2" (1181 mm) net section lengths are available (see **Table 11** and **Page 32** - **Item 3**). Plan the vent lengths so that a joint does not occur at the intersection of ceiling or roof joists. Refer to the Vent Section Length Chart.

	Vent Section Length Chart						
Norr Section (inc	ninal Length hes)	6	12	24	36	48	T O T

Table 10a

* Convert inches into metric equivalent measure, as follows:

Millimeters (mm) = Inches x 25.4 Centimeters (cm) = Inches x 2.54 Meters (M) = Inches x .0254

Vertical (Offset) Installation

Analyze the vent routing and determine the quantities of vent sections and number of elbows required. Refer to Vertical Vent Figures and Tables on Pages 17 & 18 to select the type of vertical installation desired. Vent sections are available in net lengths of 4-1/2" (114 mm), 10-1/2" (267 mm), 22-1/2" (572 mm), 34-1/2" (876 mm) and 46-1/2" (1181 mm). Refer to the Vent Section Length Chart on Page 14 for an aid in selecting length combinations. Elbows are available in 90° and 45° configurations. Refer to Figure 22 on Page 16 for the SV4.5E45 and SV4.5E90 elbow dimensional specifications.

Where required, a **telescopic vent section** (SV4.5LA) may be used to provide the installer with an option in installing in tight and confined spaces or where the vent run made up of fixed length pieces develops a joint in a undesirable location, or will not build up to the required length. The SV4.5LA Telescopic Vent Section has an effective length of from 1-1/2" (38 mm) to 7-1/2" (191 mm). The SV4.5LA is fitted with a locking inclined channel end (identical to a normal vent section component) and a plain end with 3 pilot holes. Slip the plain end over the locking channel end of a standard SV4.5 vent component the required distance and secure with three screws.

Maintain a minimum 1" (25 mm) clearance to combustible materials for all vertical elements. Clearances for all horizontal elements are 3" (76 mm) on top, 1" (25 mm) on sides and 1" (25 mm) on the bottom.

A. Frame ceiling opening - Use a plumb line from the ceiling above the appliance to locate center of the vertical run. Cut and/or frame an opening, 10-1/2" x 10-1/2" (267mm x 267mm) inside dimensions, about this center mark (*Figure 19*).

B. Attach vent components to appliance - Secure Vent SV4.5 direct vent system components are unitized concentric pipe components featuring positive twist lock connections (*see Figure 20*).

All of the appliances covered in this document are fitted with collars having locking inclined channels. The dimpled end of the vent components fit over the appliance collar to create the positive twist lock connection.

To attach a vent component to the appliance collar, align the dimpled end over the collar, adjusting the radial alignment until the four locking dimples are aligned with the inlet of the four inclined channels on the collar (*refer to Figure 20*). Push the vent component against the collar until it fully engages, then twist the component clockwise, running the dimples down and along the incline channels until they seat at the end of the channels. The unitized design of the **Secure Vent** components will engage and seal both the inner and outer pipe without the need for sealant or screws. If desired, a #6 x 1/2" screw may be used at the joint, but is not required as the pipe will securely lock when twisted.

Note: An elbow may also be attached to the appliance collar. Attach in the same manner as you would a vent section.

C. Attach vent components to each other - Other vent sections may be added to the previously installed section in accordance with the requirements of the vertical vent Figures and Tables. To add another vent component to a length of vent run, align the dimpled end over the inclined channel end of the previously installed section, adjusting the radial alignment until the four locking dimples are aligned with the inlets of the four incline channels of the previous section.

Push the vent component against the previous section until it fully engages, then twist the component clockwise running the dimples down and along the incline channels until they seat at the end of the channels. This seating position is indicated by the alignment of the arrow and dimple as shown in *Figure 20*.

D. Install firestop/spacer at ceiling - When using Secure Vent, use SV4.5VF firestop/spacer at ceiling joists; when using Secure Flex, use SF4.5VF firestop/spacer. If there is living space above the ceiling level, the firestop/spacer must be installed on the bottom side of the ceiling. If attic space is above the ceiling, the firestop/spacer must be installed on the top side of the joist. Route the vent sections through the framed opening and secure the firestop/spacer with 8d nails or other appropriate fasteners at each corner. Remember to maintain 1" (25 mm) clearance to combustibles, framing members, and attic or ceiling insulation when running vertical chimney sections. Attic insulation shield (96K94) may be used to obtain the required clearances indicated here. See installation accessories, Pages 32 through 34.

E. Support the vertical vent run sections -Note - Proper venting support is very important.

The weight of the vent must not be supported by the firplace in any degree.

Support the vertical portion of the venting system every 8 feet (2.4m) above the fireplace vent outlet.

One method of support is by utilizing field provided support straps (conventional plumber's tape). Secure the plumber's tape to the framing members with nails or screws. Loop the tape around the vent, securing the ends of the tape to the framing. If desired, sheet metal screws #6 $\times 1/2^{*}$ length may be used to secure the support straps to the vent pipe. Refer to *Figure 21*.

F. Change vent direction to horizontal/inclined run - At transition from or to a horizontal/inclined run, install the SV4.5E45 and SV4.5E90 elbows in the same manner as the straight vent sections. The elbows feature a twist section to allow them to be routed about the center axis of their initial collar section to align with the required direction of the next vent run element. Twist elbow sections in a clockwise direction only so as to avoid the possiblity of unlocking any of the previously connected vent sections. See *Figure 22*.

G. Continue installation of horizontal/inclined sections - Continue with the installation of the straight vent sections in horizontal/inclined run as described in Step C. Install support straps every 5 ft. (1.52 m) along horizontal/inclined vent runs using conventional plumber's tape. See Page 19, Figure 31. It is very important that the horizontal/inclined run be maintained in a straight (no dips) and recommended to be in a slightly elevated plane, in a direction away from the fireplace of 1/4 " rise per foot (20 mm per meter) which is ideal, though rise per foot run ratios that are smaller are acceptable all the way down to at or near level. Use a carpenter's level to measure from a constant surface and adjust the support straps as necessary.

It is important to maintain the required clearances to combustibles: 1" (25 mm) at all sides for all vertical runs; and 3" (76 mm) at the top, 1" (25 mm) at sides, and 1" (25 mm) at the bottom for all horizontal/inclined runs.

H. Frame roof opening - Identify location for vent at the roof. Cut and/or frame opening per Roof Framing Chart and *Figure 23*.

I. Install the roof flashing - Extend the vent sections through the roof structure. Install the roof flashing over the vent section and position such that the vent column rises vertically (use carpenters level) (*Figure 24*). Nail along perimeter to secure flashing or adjust roofing to overlap the flashing edges at top and sides only and trim where necessary. Seal the top and both sides of the flashing with waterproof caulking.

J. Install the storm collar - Install the storm collar, supplied with the flashing, over the vent/flashing joint. See *Figure 24*. Loosen the storm collar screw. Slide collar down until it meets the top of the flashing. Tighten the adjusting screw. Apply non-combustible caulking or mastic around the circumference of the joint to provide a water tight seal.

K. Install the vertical termination - The final step involves installation of the SV4.5CGV-1 Vertical Termination. Extend the vent sections to the height as shown in the "Vertical vent termination section" on Page 7. The SV4.5CGV-1 Vertical Termination (Figure 25) can be installed in the exact same fashion as any other Secure Vent section. Align the termination over the end of the previously installed section, adjusting the radial alignment until the four locking dimples of the termination are aligned with the inlets of the four incline channels of the last vent section. Push the termination down until it fully engages, then twist the termination clockwise running the dimples down and along the incline channels until they are seated at the end of the channels.

If the vent system extends more than 5 feet (1.5 m) above the roof flashing, stabilizers may be necessary. Additional screws may be used at section joints for added stability. Guide wires may be attached to the joint for additional support on multiple joint configurations.

VERTICAL VENT FIGURES/TABLES

Note: Secure Vent (rigid vent pipe) is shown in the Figures; Secure Flex (flexible vent pipe) may also be used.

🛦 WARNING

Under No Circumstances, May Separate Sections of Concentric Flexible Vent Pipe Be Joined Together.

Notes:

- It is very important that the horizontal/inclined run be maintained in a straight (no dips) and recommended to be in a slightly elevated plane, in a direction away from the fireplace of 1/4" rise per foot (20 mm per meter) which is ideal, though rise per foot run ratios that are smaller are acceptable all the way down to at or near level.
- SV4.5VF (Secure Vent), SF4.5VF (Secure Flex) firestop/spacer must be used anytime vent pipe passes through a combustible floor or ceiling. SV4.5HF (Secure Vent), SF4.5HF (Secure Flex)firestop/spacer must be used anytime vent pipe passes through a combustible wall.
- Two 45 degree elbows may be used in place of one 90 degree elbow. The same rise to run ratios, as shown in the venting Figures for 90 elbows, must be followed if 45 degree elbows are used.
- AN ELBOW IS ACCEPTABLE AS 1 FOOT OF VERTICAL RISE EXCEPT WHERE AN ELBOW IS THE ONLY VERTICAL COMPONENT IN THE SYSTEM (See Figure 35).

	Table A						
HM	aximum	V M	inimum				
feet	(meter)	feet	(meter)				
2	(0.610)	1	(0.305)				
4	(1.219)	2	(0.610)				
6	(1.829)	3	(0.914)				
8	8 (2.438) 4 (1.219)						
V+ I	V + H = 40 feet (12.2 meters) Max. H = 8 feet (2.4 meters) Max. Ratio V to H ratio is 1:2						

Example: If 8 feet of (H) horizontal vent run is needed, then 4 feet minimum (V) vertical vent will be required.

This table shows a 1(V) to 2(H) ratio. For every 1 foot of (V) vertical, you are allowed 2 feet of (H) horizontal run, up to a maximum horizontal run of 8 feet.

Figure 27 - Rear Vent - ONE 90 DEGREE ELBOW

HORIZONTAL (OUTSIDE WALL) TERMINATION SYSTEM

Figure 31, and Figures 34 to 40 on Pages 21 to 23 and their associated Horizontal Vent Table illustrate the various horizontal venting configurations that are possible for use with these appliances. Secure Vent pipe applications are shown in these Figures; Secure Flex pipe may also be used. A Horizontal Vent Table summarizes each system's minimum and maximum vertical and horizontal length values that can be used to design and install the vent components in a variety of applications.

Both of these horizontal vent systems terminate through an outside wall. Building Codes limit or prohibit terminating in specific areas. Refer to *Figure 6* on *Page 8* for location guidelines.

Secure Vent SV4.5 direct vent system components are unitized concentric pipe components featuring positive twist lock connection, (*refer to Figure 20* on *Page 15*). All of the appliances covered in this document are fitted with collars having locking inclined channels. The dimpled end of the vent components fit over the appliance collar to create the positive twist lock connection.

A. Plan the vent run -

Analyze the vent routing and determine the types and quantities of sections required 4-1/2" (114 mm), 10-1/2" (267 mm), 22-1/2" (572 mm), 34-1/2" (876 mm) and 46-1/2" (1181 mm) net section lengths are available. Plan the vent lengths so that a joint does not occur at the intersection of ceiling or roof joists. Make allowances for elbows as indicated in *Figure 22*.

Maintain a minimum 1" (25 mm) clearance to combustibles on the vertical sections. Clearances for the horizontal runs are; 3" (76 mm) on top, 1" (25 mm) on sides, and 1" (25 mm) at the bottom.

B. Frame exterior wall opening -

Locate the center of the vent outlet on the exterior wall according to the dimensions shown in *Figure 13* on *Page 10*. Cut and/or frame an opening, 10-1/2" x 12-1/8" (267 mm x 308mm) inside dimensions, about this center.

C. Frame ceiling opening - If the vertical route is to penetrate a ceiling, use plumb line to locate the center above the appliance. Cut and/or frame an opening, 10-1/2" x 10-1/2" (267 mm x 267 mm) inside dimensions, about this center (refer to *Figure 19* on *Page 15*).

D. Attach vent components to appliance - To attach a vent component to the appliance collar, align the dimpled end over the collar, adjusting the radial alignment until the four locking dimples are aligned with the inlets of the four incline channels on the collar (*refer to Figure 20* on *Page 15*).

Push the vent component against the collar until it fully engages, then twist the component clockwise, running the dimples down and along the incline channels until they seat at the end of the channels.

The unitized design of the **Secure Vent** components will engage and seal both the inner and outer pipe elements with the same procedure. Sealant and securing screws are not required.

Note: An elbow may also be attached to the appliance collar. Attach in the same manner as you would a vent section.

E. Attach vent components to each other - Other vent sections may be added to the previously installed section in accordance with the requirements of the vent tables. To add another vent component to a length of vent run, align the dimpled end of the component over the inclined channel end of the previously installed section, adjusting the radial alignment until the four locking dimples are aligned with the inlets of the four incline channels of the previous section. Push the vent component against the previous section until it fully engages, then twist the component clockwise running the dimples down and along the incline channels until they seat at the end of the channels. This seating position is indicated by the alignment of the arrow and dimple as shown in *Figure 20 on Page 15*.

F. Install firestop/spacer at ceiling -

When using Secure Vent, use SV4.5VF firestop/ spacer at ceiling joists; when using Secure Flex, use SF4.5VF firestop/spacer. If there is living space above the ceiling level, the firestop/spacer must be installed on the bottom side of the ceiling. If attic space is above the ceiling, the firestop/spacer must be installed on the top side of the joist. Route the vent sections through the framed opening and secure the firestop/spacer with 8d nails or other appropriate fasteners at each corner.

Remember to maintain 1" (25 mm) clearance to combustibles, framing members, and attic or ceiling insulation when running vertical chimney sections.

G. Support the vertical run sections -See Section E on Page 15.

H. Change vent direction - Attransition from or to a horizontal/inclined run, install the SV4.5E45 and SV4.5E90 elbows in the same manner as the straight vent sections. The elbows feature a twist section to allow them to be routed about the center axis of their initial collar section to align with the required direction of the next vent run element. Twist elbow sections in a clockwise direction only so as to avoid the possiblity of unlocking any of the previously connected vent sections. See *Figure 22 on Page 16*. I. Continue installation of horizontal/inclined sections - Continue with the installation of the straight vent sections in horizontal/inclined run as described in Step E. Install support straps every 5 ft. (1.52 m) along horizontal/inclined vent runs using conventional plumber's tape. See *Figure 31. It is very important that the horizontal/inclined run be maintained in a straight (no dips)* and recommended to be in a slightly elevated plane, in a direction away from the fireplace of 1/4" rise per foot (20 mm per meter) which is ideal, though rise per foot run ratios that are smaller are acceptable all the way down to at or near level.

It is important to maintain the required clearances to combustibles: 1"(25 mm) at all sides for all vertical runs; and 3"(76 mm) at the top, 1" (25 mm) at sides, and 1" (25 mm) at the bottom for all horizontal/inclined runs.

J. Assemble vent run to exterior wall - If not previously measured, locate the center of the vent at the exterior wall. Prepare an opening as described in *Step B*. Assemble the vent system to point where the terminus of the last section is located relative to the exterior surface to which the termination is to be attached (see *Figures 32 & 33 and Table 12 on Page 21*.

If the terminus of the last section is not within this distance, use the **telescopic vent section SV4.5LA**, as the last vent section. For wall thicknesses greater than that shown in *Figure 33 and Table 12 on Page 21*. This table lists the additional venting components needed (in addition to the termination and adapter) for a particular range of wall thicknesses.

K. Attach termination adapter - Attach the adapter (adapter - SV4.5RCH - provided with the termination) to the vent section or telescoping vent section, elbow or appliance collar as shown in *Figures 32 & 33* in the same manner as any SV4.5 vent component (refer to *Step E*).

L. Install Firestop/Spacer at exterior wall - When using the square termination, install SV4.5HF (Secure Vent), SF4.5HF (Secure Flex) Firestop/Spacer over the opening at the exterior side of the framing, long side up, with the 3 inch spacer clearance at the top as shown in *Figure 32*, and nail into place.

(The Firestop/Spacer may also be installed over the opening at the interior side of framing).

🛕 IMPORTANT

The vent termination is hot while in operation and for a period of time following the use of the fireplace. To prevent contact with hot surfaces, we recommend the use of a *Termination Guard*. See *Items* 12 and 13 on Page 32. This can be purchased at your local dealer.

Horizontal terminations have been designed to perform in a wide range of weather conditions. Our terminations meet or exceed industry standards.

When selecting the locations of your horizontal terminations, do not place the termination where water from eaves and adjoining rooflines may create a heavy flow of cascading water onto the termination cap. If the cap must be placed where the possibility of cascading water exists, it is the responsibility of the builder to direct the water away from the termination cap by using gutters or other means.

Take care to carefully follow the installation instructions for the termination, including the use of silicone caulking where required.

M. Install the Square Termination (SV4.5HT-2)

Install the square termination - For the last step , from outside the exterior wall, slide the collars of the termination onto the adapter (the outer inside the outer and the inner outside the inner) until the termination seats against the exterior wall surface to which it will be attached. Orient the housing of the termination with the arrow pointed upwards. Secure the termination to the exterior wall. The horizontal termination must not be recessed into the exterior wall or siding by more than the 1-1/4" (32 mm) as shown in *Figure 33*.

HORIZONTAL VENT FIGURES/TABLES

Notes:

- Secure Vent components (rigid vent pipe and terminal) are shown in the Figures; Secure Flex components (flexible vent pipe and terminal) may also be used.
- Two 45 degree elbows may be used in place of one 90 degree elbow. The same rise to run ratios, as shown in the venting Figures for 90 elbows,must be followed if 45 degree elbows are used.
- SV4.5VF (Secure Vent), SF4.5VF (Secure Flex) firestop/spacer must be used anytime vent pipe passes through a combustible floor or ceiling. SV4.5HF (Secure Vent), SF4.5HF (Secure Flex) firestop/spacer must be used anytime vent pipe passes through a combustible wall.
- It is very important that the horizontal/inclined run be maintained in a straight (no dips) and recommended to be in a slightly elevated plane, in a direction away from the fireplace of 1/4" rise per foot (20 mm per meter) which is ideal, though rise per foot run ratios that are smaller are acceptable all the way down to at or near level.
- The tables show a 1(V) to 5(H) ratio up to a maximum horizontal run of 20 feet except for installations where an elbow is the only vertical vent section in the system (see Figure 35).
- AN ELBOW IS ACCÉPTABLE AS 1 FOOT ÓF VERTICAL RISE EXCEPT WHERE AN ELBOW IS THE ONLY VERTICAL COMPONENT IN THE SYSTEM. See Figure 35.

Venting Components Required for Various Exterior Wall Thick- nesses, when using Square Termination Kit (SV4.5HT-2)						
Vent Components Required	Exterior Wall Thickness - inches (mm)					
Termination Kit Only	6 to 9-1/4 (152 to 235)					
Termination Kit and 6 In. Vent Section (SV4.5L6)	10-1/2 to 13-3/4 (267 to 349)					
Termination Kit and 12 in. Vent Section (SV4.5L12)	16-1/2 to 19-3/4 (419 to 502)					
Termination Kit & Telescopic Section (SV4.5LA 2 to 7-1/2") & 6" vent section (SV4.5L6)11 to 19-3/4 (279 to 10-3/4)						
Table 12 Note: See Fig. when using S	12 Note: See Figure 33 showing wall thickness range when using SV4.5HT-2 termination kit only.					

See Table 12 as an aid in venting component selection for a particular range of exterior wall thicknesses.

A WARNING

Under no circumstances, may separate sections of concentric flexible vent pipe be joined together.

See Table 12 as an aid in venting component selection for a particular range of exterior wall thicknesses.

Figure 35 - Top Vent -ONE 90 DEGREE ELBOW - ELBOW CONNECTION AT APPLIANCE

	Tal	hle G		Example: If 20 feet of (H) hori-	
ни	H Maximum V Minimum		Minimum	zontal vent run is needed, then 4 feet minimum of (V) vertical	
feet	(meter)	feet	(meter)	vent will be required.

10	(3.048)	2	(0.610)	of vertical, you are allowed 5	
15	(4.572)	3	(0.914)	a maximum (H) horizontal run	
20	(6.096)	4	(1.219)	of 20 feet.	
V	+ H = 40 fee H = 20 ft. (6	et (12.2 6.096 m	: m) Max. 1) Max.		
When using Secure Flex, use Firestop/Spacer SF4.5VF. When using Secure Flex, use Firestop/Spacer SF4.5HF. @ Wall Firestop/Spacer V					
Square termination (SV4.5HT-2) shown. (SV4.5VF)					
See Table 12 as an aid in venting component selection for a particular range of exterior wall thicknesses.					
Figure 36 - Top Vent - ONE 90 DEGREE ELBOW - ELBOW CONNECTION NOT DIRECTLY AT APPLIANCE					

HORIZONTAL VENT FIGURES/TABLES (CONTINUED)

Table H						
H+H	I ₁ Maximum	нм	laximum	V Mi	nimum	
feet	(meter)	feet	(meter)	feet	(meter)	
5	(1.524)	2	(0.610)	1	(0.305)	
10	(3.048)	4	(1.219)	2	(0.610)	
15	(4.572)	6	(1.829)	3	(0.914)	
20	(6.096)	8	(2.438)	4	(1.219)	
	V + H + H ₁ = 40 feet (12.2 m) Max H = 8 feet (2.438 meters) Max. H + H ₁ = 20 feet (6.096 meters) Max.					

Example: If 20 feet of $(H + H_1)$ horizontal vent run is needed, then 4 feet minimum of (V) vertical vent will be required.

This table shows a 1(V) to 5(H) ratio. For every 1 foot of (V) vertical, you are allowed 5 feet of $(H+H_i)$ horizontal run, up to a maximum horizontal run of 20 feet.

See Table 12 on Page 21 as an aid in venting component selection for a particular range of exterior wall thicknesses.

Square termination (SV4.5HT-2) shown.

Figure 37 - Rear Vent - TWO 90 DEGREE ELBOWS

See Table 12 on Page 21 as an aid in venting component selection for a particular range of exterior wall thicknesses.

Example: If 20 feet of $(H + H_1)$ horizontal vent run is needed, then 4 feet minimum of (V) vertical vent will be required.

This table shows a 1(V) to 5(H) ratio. For every 1 foot of (V) vertical, you are allowed 5 feet of $(H + H_1)$ horizontal run, up to a maximum horizontal run of 20 feet.

An elbow is acceptable as 1 foot of vertical rise except where an elbow is the only vertical component in the system. See **Figure 35**.

Figure 38 - Top Vent - TWO 90 DEGREE ELBOWS

HORIZONTAL VENT FIGURES / TABLES (CONTINUED)

Figure 40 - Top Vent - THREE 90 DEGREE ELBOWS

VERTICAL OR HORIZONTAL VENTING USING Secure Flex Kits and components

Secure Flex venting kits and components may be used in any venting application in place of rigid Secure Vent (SV4.5) direct vent components. All restrictions, clearances and allowances that pertain to the rigid piping apply to the flexible venting. Secure Flex kits may not be modified; also, under no circumstances may separate sections of flex pipe be joined together.

Using adapter (SV4.5RF), **Secure Flex** kits may be added to the end of a vent run made up of rigid **Secure Vent** (SV4.5) vent sections provided that doing so does not violate any of the venting length, height, routing, horizontal to vertical ratio requirements or clearance considerations detailed in this manual.

Secure Flex kits come with an adapter that can be fitted to the inclined channel end of the last **Secure Vent** (SV4.5) vent section in a rigid system in the exact same fashion as any other **Secure Vent** section.

Align the dimpled end of the adapter over the previously installed section or appliance collar, adjusting the radial alignment until the four locking dimples of the adapter are aligned with the inlets of the four incline channels of the last vent section or collar. Push on the adapter until it fully engages, then twist the adapter clockwise running the dimples down and along the incline channels until they seat at the end of the channels.

Attach the flexible vent to the adapter as follows (see Figure 41):

A. Install the Inner Flex Pipe -

- Install the small gear clamp loosely around the inner flexible vent pipe, push it back out of the way.
- 2. Apply a bead of Mill-Pac Black (700° F) high temperature sealant - Catalog No. 10K81 to the inner adapter collar, approximately 1/2 inch from the end.
- 3. Pull and extend the inner flexible vent pipe.
- Slide the inner flex pipe over the adapter collar. Ensure the flexible vent pipe completely engages the adapter collar to a distance of 1-3/4 inches from the end, and that it is free from damage or tears.
- 5. Slide the gear clamp down and tighten it fully to secure the flexible vent to the adapter inner collar approximately 3/4 inch from the end of the flex.
- **6**. Install **three screws 120 degrees apart** through the flexible vent pipe and into the adapter collar just below the gear clamp to provide additional security to the connection.

B. Install the Outer Flex Pipe -

- 1. Install the large gear clamp loosely around the outer flexible vent pipe, push it back out of the way.
- 2. Apply a bead of Mill-Pac Black (700° F) high temperature sealant - Catalog No. 10K81) to the outer adapter collar; to the grooves of the collar which extend approximately 1 inch from the end and to the flat surface, approximately 1-3/8 inches from the end.
- 3. Pull and extend outer flexible vent pipe.
- Slide the outer flex pipe over the adapter collar. Ensure the flexible vent pipe completely engages the adapter collar to a distance of 13⁴ inches from the end, and that it is free from damage or tears.
- Slide the gear clamp down and tighten it fully to secure the flexible vent to the adapter outer collar approximately 3/4 inch from the end of the flex.
- **6.** Install **three screws 120 degrees apart** through the flexible vent pipe and into the adapter collar just below the gear clamp to provide additional security to the connection.

C. Route Flex Vent -

Ensure that the flex vent is properly routed to provide the required clearance. **Do not** allow the flexible vent to bend in a radius tighter than 5" (127 mm). Refer to *Figure 42*. Space out the internal flex vent spacers evenly - approximately every 6 inches - and avoid kinking of inner pipe. Support horizontal sections of flex with metal straps at 2 foot (0.61 m) intervals.

D. Install Firestop / Spacers at ceilings and walls - When Secure Flex penetrates a wall or ceiling, a firestop / spacer is required: use the SF4.5 VF firestop / spacer for ceilings and the SF4.5 HF firestop / spacer for walls. See the appropriate sections and Figures shown throughout the venting section for their installation requirements.

E. Attach Flex Vent to Termination -

Secure Flex components can be purchased separately and attached to bulk lengths of **Secure Flex** flexible tubing cut to size at the job site. Secure the flexible vent to the **Secure Flex** terminations in the same manner (see *Figure* **41**) as it was attached to the adapter.

Note: Secure Flex vent must be attached to Secure Flex terminations only. DO NOT substitute Secure Vent terminations or the Secure Vent adapter for Secure Flex components. The collars of Secure Flex terminations and adapters have a different diameter than that used with the Secure Vent pipe. Additionally, Secure Flex components have an extended length center tube for use in attaching the flexible vent.

Step 4. FIELD WIRING

Refer to Section A for millivolt appliances and Section B for electronic appliances. The gas valve is set in place and pre-wired at the factory on both models.

A CAUTION

Ensure that wires are positioned away from hot surfaces and sharp edges.

A CAUTION

Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous appliance operation.

Do not connect the optional wall switch for burner operation to a 120 Volt AC power supply.

A. SIT Millivolt Wiring (See Figure 43) –

- Select any of the following optional controls: appliance-mounted (rocker switch) or wallmounted switch, wall thermostat, or the standard or deluxe remote control kits. If appliance-mounted ON/OFF control is selected
- mount it in the gas valve mounting bracket.
 If wall-mounted ON/OFF control or thermostat is selected mount it in a convenient location on a wall near the fireplace.

- 3. Wire the control within the millivolt control circuit using the 15 feet of 2 conductor wire supplied with the unit . *Caution: do not connect the optional wall switch to a 120V power supply.*
- 4. Alternatively, the appliance may be operated without the use of the controls indicated in *Step 1*, solely by manipulating the gas valve control knob. In order to use this method, twist the free ends of the two conductor wire (which would otherwise go to the standard ON/OFF switch or Optional Switch) together as shown in *Figure 43*.

Note: Wire is located inside the control compartment

Note: The supplied 15 feet of 2 conductor wire has one end of each conductor connected to the gas valve circuit and the other end of each conductor placed loose inside the control compartment.

B. Electronic Wiring (See Figure 45) –

Note: The electronic appliance must be connected to the main power supply.

The junction box is located on the right side of the appliance. It contains a factory installed and wired outlet box (duplex receptacle). Also, an optional field-provided junction box with receptacle may be installed at the front of the control compartment on either side of the cabinet. *See Figure 44.* It will be held in place by a conduit fitting and locknut (field-provided).

- 1. Route a 3-wire 120Vac 60Hz 1 ph power supply to the appliance junction box.
- If the factory-provided outlet/junction box at the right rear of the fireplace is being used, remove the outlet box from the junction box by removing two screws.

- Connect the power supply wires (including the ground supply wire) as shown in *Figures* 44 & 45. (If the field-provided J-box/outlet box is being used, all of the outlet box wiring must be field-provided).
- Locate and install a low voltage (24V) wallmounted switch or thermostat (both fieldprovided)in the desired location.
- 5. Connect the low voltage wire, located inside the control compartment, to the wall-mounted switch or thermostat.

Note: The supplied 15 feet of 2 conductor wire has one end of each conductor connected to the gas valve circuit and the other end of each conductor placed loose inside the control compartment.

- Insert the control circuit plug into the unswitched receptacle of the outlet box.
- 7. After wiring is complete, mount the outlet box to the J-Box.

Note: The gas valve-mounted ON/OFF switch is shown in **Figure 48**. It is integral with the gas valve and should be set to the ON position.

Step 5. WIRING - OPTIONAL FORCED AIR BLOWER KIT

FBK-100, FBK-200 and FBK250 Kits (See Figures 44 & 45) -

An electrical outlet box (receptacle) is factory -provided for the installation of the **FBK-100**, **FBK-200 and FBK-250** forced air blower kits. (An optional field-provided outletbox/J-Box may also be used. Electrical power must be connected to either of these receptacles in order to operate these blowers. Install the blower kits according to the installation instructions provided with the kits.

Figure 45

A CAUTION

Ground supply lead must be connected to the wire attached to the green ground screw located on the outlet box. See *Figure 47*. Failure to do so will result in a potential safety hazard. The appliance must be electrically grounded in accordance with local codes or, in the absence of local codes, the National Electrical Code, ANSI/NFPA 70-latest edition. (In Canada, the current CSA C22-1 Canadian Electrical Code).

Step 6. CONNECTING GAS LINE

Make gas line connections. All codes require a shut-off valve mounted in the supply line. *Figure* **46** illustrates two methods for connecting the gas supply. The flex-line method is acceptable in the U.S., however, Canadian requirements vary depending on locality. Installation must be in compliance with local codes.

These appliances are equipped with a gas flex line for use (where permitted) in connecting the appliance to the gas line. A gas flex line is provided to aid in attaching the direct vent appliance to the gas supply. The gas flex line can only be used where local codes permit. See *Figure 46* for flex line description. The flex line is rated for both natural gas and propane gas. A manual shut off valve is also provided with the flex line.

The incoming gas line should be piped into the valve compartment and connected (see *Figures 47 & 48*). The millivolt control valve has a 3/8" (10 mm) NPT thread inlet port. The electronic control valve has a 1/2" (13 mm) NPT thread inlet port and is fitted with a 1/2" x 3/8" (13 mm x 10 mm) NPT fitting.

Secure all joints tightly using appropriate tools and sealing compounds (ensure propane resistant compounds are used in propane applications).

Optional: Seal around the gas line to prevent cold air leakage.

TEST ALL CONNECTIONS FOR GAS LEAKS (FACTORY AND FIELD):

A WARNING

Never use an open flame to check for leaks.

Turn on gas supply and test for gas leaks using a gas leak test solution (also referred to as bubble leak solution). *Note:* Using a soapy water solution (50% dish soap, 50% water) is an effective leak test solution but it is not recommended, because the soap residue that is left on the pipes/fittings can result in corrosion over time.

- A. Light the appliance (refer to the lighting instructions label in control compartment or homeowner's manual).
- B. Brush all joints and connections with the gas leak test solution to check for leaks. If bubbles are formed, or gas odor is detected, turn the gas control knob (off/pilot/on) to the "OFF" position. Either tighten or refasten the leaking connection, then retest as described above.
- C. When the gas lines are tested and leak free be sure to rinse off the leak testing solution,

CONTROL COMPARTMENT ACCESS / LOUVER PANEL INSTRUCTIONS (Ref. Figures 47 & 48)

NOTE: The top louvered panel and the bottom louvered control panel door remove and install the same way as follows:

The gas controls can be found behind the control compartment access door.

Removing Control Compartment Door:

Open the door by gently lifting it upward until the hook catches on boths sides clear the locating slots. Then pull door out to remove.

D. Turn on burner then observe the individual tongues of flame on the burner. Make sure all ports are open and producing flame evenly across the burner. If any ports are blocked, or partially blocked, clean out the ports.

On millivolt systems, the piezo igniter, HI/LO flame adjustment knob, and pilot and main gas OFF/ON control knob are located below the glass panel enclosure. The gas valve for electronic systems is also located below the glass enclosure panel. See *Figure 48*.

Reinstalling Control Compartment Door:

To reinstall, insert the hook catches on each side of the door into the corresponding slots in the control compartment opening, then gently push forward and slide down until it locks in place.

Step 7. CHECKING APPLIANCE OPERA-TION

With the gas line installed, run initial system checkout before closing up the front of the appliance. Follow the pilot lighting instructions provided in the Homeowner's Care and Operation Instructions. For piezo igniter location see *Figure 48* (millivolt appliances only).

Note: The (pull-out) Lighting instructions label can be found in the control compartment (see Figure 48).

When first lighting the appliance, it will take a few minutes for the line to purge itself of air. Once purging is complete, the pilot and burner will light and operate as indicated in the instruction manual. Subsequent lightings of the appliance will not require such purging. Inspect the pilot flame.

SIT Millivolt Appliance Checkout

The pilot flame should be steady, not lifting or floating. Flame should be blue in color with traces of orange at the outer edge. The top 3/8" (10 mm) at the pilot generator (thermopile) and the top 1/8" min (tip) of the quick drop out thermocouple should be engulfed in the pilot flame. The flame should project 1" (25 mm) beyond the hood at all three ports (See *Figure 49*).

To light the burner; rotate the gas valve control knob counterclockwise to the "ON" position then turn "ON" the OFF/ON switch (installed at *Step 4*).

Observe the individual tongues of flame on the burner. Make sure all ports are open and producing flame evenly across the burner. If any ports are blocked, or partially blocked, clean out the ports.

Replace logs if removed for pilot inspection.

To light the burner; turn "ON" the remote wall switch and rotate the gas valve control knob counterclockwise to the "ON" position.

Electronic Appliance Checkout

To light the burner, turn 'ON' the optional remote wall switch and turn the gas control switch to the "ON" position. Ensure the Igniter lights the pilot. The pilot flame should engulf the flame rod as shown in *Figure 50*.

Step 8. INSTALL VOLCANIC STONE, GLOWING EMBERS AND LOGS

- 1. Remove the front glass enclosure panel (see Removing Glass Enclosure Panels on Page 30).
- 2. Carefully remove the log set box from the firebox. Next, remove embers and volcanic stone from the control compartment. Handle logs carefully to prevent breakage.
- 3. Install Decorative Volcanic stone Mound up a portion of the volcanic stone in front of the burner in a pleasing pattern.
- 4. Placement of Glowing Embers -Separate the Embers (rockwool) into pieces about the size of a quarter (see Figure 51). Keep the pieces fluffed up, not matted. Distribute these pieces over the surface of the burner, as shown in Figure 52. Do not use more than is necessary. Ensure that the main burner slots remain uncovered by the ember material.

Note: This appliance is provided with enough Glowing Embers for several applications, do not use all that is in a new bag at one time. For best glowing effect, replace the ember material annually.

5. Placement of Logs -

The logs have locating notches which correspond to locating brackets and holes which correspond to locating pins to help ensure that they are properly positioned. Proper log placement is critical to prevent sooting.

A WARNING

DO NOT attempt to install the logs until the appliance installation has been completed, the gas line connected and tested for leaks and the initial burner operation has been checked out.

🛕 WARNING

The size and position of the log set is critical to achieve a safe, reliable and attractive flame pattern. Any attempt to use a different log set in the fireplace will void the warranty and will result in incomplete combustion, sooting, and poor flame quality.

REFERENCE Firebox Accessories / Parts					
Cat. No.	Model No.	Description			
88L53	FGE	Bag of Glowing Embers (1 oz. rockwool)			
80L42 FDVS Bag of Decorative Volcanic stone					
Table 13					

A WARNING

This appliance is not designed to burn wood. Any attempt to do so could cause irrep arable damage to appliance and prove hazardous to your safety.

🛦 WARNING

If logs are not installed according to the log installation instructions, flame impingement and improper combustion could occur and result in soot and/or excessive production of carbon monoxide (CO), a colorless, odorless, toxic gas.

Log Installation Instructions (refer to Figure 52)

Carefully position the ceramic fiber logs into the firebox as shown here. Logs should be placed in the order shown and per the following instructions.

- (See photo #1) Place embers on the front and sides of the burner. Do NOT place embers over any of the slots on the burner. Place the volcanic stone in front of the burner per instructions in *Figures 52* (also see *Placement of Glowing Embers & Install Decorative Volcanic Stone on Page 28*).
- 2. (See photo #2) Place the rear log (A) as shown. Position the 2 notches on the bottom of the log over the 2 corresponding locating brackets.
- (See photo #3) Place the right front log (B) as shown. The right locating pin on burner fits into corresponding hole on the bottom of log. Position the notch on the bottom of the log over the right front locating bracket (the bracket is shown in photo #1).
- 4. (See photo #4) Place the left front log (C) as shown. The left locating pin on burner fits into corresponding hole on the bottom of log. Position the notch on the bottom of the log over the left front locating bracket (the bracket is shown in photo #1).

Figure 52

NOTE: DIAGRAMS & ILLUSTRATIONS NOT TO SCALE.

Step 9. INSTALLING THE GLASS DOOR

WARNING

Do not operate appliance with the glass front removed, cracked or broken. Replacement of the glass should be done by a licensed or qualified service technician.

A WARNING

Do not attempt to substitute the materials used on this door, or replace cracked or broken glass with any materials other than those provided by the appliance manufacturer.

A WARNING

Handle this glass with extreme care! Tempered glass is susceptible to damage – do not scratch or handle roughly while reinstalling the glass door frame.

A WARNING

The glass door of this appliance must only be replaced as a complete unit as provided by the manufacturer. Do not attempt to replace broken, cracked or chipped glass separately.

A WARNING

Do not attempt to touch the front enclosure glass with your hands while the fireplace is in use.

Removing Glass Enclosure Panels (see *Figure 53)*

- Remove the top louver assembly by lifting it up and pulling it out.
- Remove the control compartment access door (see removal instructions on *Page 27* - *Removing Control Compartment Door*).
- Locate the two (2) latches at the top of the control compartment. To disengage the two latches from the bottom vee-flange of the glass enclosure panel, reach for the handles located towards the back of the latches and pull the handles down toward the front of the appliance.
- Swing the bottom of the door out and raise it slightly to lift the top flange of the door frame away from the appliance.

Installing Glass Enclosure Panels (see *Figure 53)*

- Visually inspect the gasket on the backside of the glass panel. The gasket surface must be clean, free of irregularities and seated firmly.
- 2. Position the glass enclosure panel in front of the firebox opening at a 45 degree angle and engage the top flange over the lip at the top of the firebox opening. *See Figure 53.*
- 3. Swing the glass enclosure panel down and back. Ensure the gasket seats evenly as the panel draws shut. Engage the Vee-flange at the bottom of the panel with the latches and close the latches to secure the panel.
- 4. Reinstall top louver assembly and control compartment door see installation instructions on *Page 27*, *Reinstalling Control Compartment Door*).

Step 10. BURNER ADJUSTMENTS

Burner Flame Appearance and Sooting Proper flame appearance is a flame which is blue at the base and becomes yellowish-orange in the body of the flame. When the appliance is first lit, the entire flame may be blue and will gradually turn yellowish-orange during the first 15 minutes of operation. If after a short period the flame stays lowered blue, or if the flame is orange with evidence of sooting (black tip), the air shutter opening may need to be adjusted.

If the air shutter openings closed too far, sooting may develop. Sooting is indicated by black puffs developing at the tips of very long orange flames. Sooting results in black deposits forming on the logs, appliance inside surfaces and on exterior surfaces adjacent to the vent termination. Sooting is caused by incomplete combustion in the flames and lack of combustion air entering the air shutter opening. To achieve a warm yellowish-orange flame with an orange body that does not soot, the shutter opening must be adjusted between these two extremes.

Air Shutter Adjustment Guidelines

- If there is smoke or soot present, first check the log set positioning to ensure that the flames are not impinging on any of the logs. If the log set is properly positioned and a sooting condition still exists, then the air shutter opening should be increased.
- The more offsets in the vent system, the larger the air shutter opening will need to be.
- An appliance operated with the air shutter opened too far, may have flames that appear blue and transparent. These weak, blue and transparent flames are termed anemic.
- Propane models may exhibit flames which candle or appear stringy. If this is present and persists, adjust the air shutter to a more closed position, then operate the appliance for a few more minutes to ensure that the flame normalizes and the flames do not appear sooty.

The following chart is provided to aid you in achieving the correct air shutter adjustment for your installation.

Air Shutter Adjustment Guidelines:					
Amount of Primary Air	Flame Color	Air Shutter Adjustment			
If air shutter is closed too far	Flame will be orange	Air shutter gap should be increased			
If air shutter is open too far	Flame will be blue	Air shutter gap should be decreased			

A WARNING

Air shutter adjustment should only be performed by a qualified professional service technician.

A WARNING

Ensure front glass panels are in place and sealed during adjustment.

A CAUTION

Carbon will be produced if the air shutter is closed too much. Any damage due to carboning resulting from improperly setting the air shutter is not covered under the warranty. **Burner Air Shutter Adjustment Procedure**

Burner Air Shutter Adjustment Procedure

- Locate adjustment rod and adjust air shutter to the standard setting as shown in *Figure 55* (adjustment rod is located in the lower control compartment). To adjust the flame, move the adjustment rod back or forward to increase or reduce the air shutter opening, respectively.
- 2. Light appliance (follow lighting procedure on lighting label in control compartment or see homeowners manual).
- 3. Allow the burner to operate for at least 15 minutes while observing the flame continuously to ensure that the proper flame appearance has been achieved (see *Figure 54*). If the following conditions are present, adjust accordingly.
 - If flame appears weak or sooty, adjust air shutter, incrementally, to a more open position until the proper flame appearance is achieved.
 - If flame stays lowered blue, adjust air shutter, incrementally, to a more closed position until the proper flame appearance is achieved.
- 4. Leave the control knob (off/pilot/on) in the ON position and the burner OFF/ON switch OFF (& remote switches, if applicable).
- When satisfied that the burner flame appearance is normal, re-install the lower control compartment door then proceed to finish the installation.

Burner Flame Appearance Models -SDDV-35 & SDDV-40 Series

Figure 54

Figure 55 - Burner Air Shutter Adjustment

1/8" (3.2 mm)

Step 11. HOOD INSTALLATION

(Refer to Figure 56)

SDDV-40

All of these appliances must have hoods installed prior to operating.

3/8" (9.5 mm)

Slide the hood into the slots on the lower edge of the cabinet top.

FINISHING REQUIREMENTS - Wall Details

Complete finished interior wall. To install the appliance facing flush with the finished wall, position framework to accommodate the thickness of the finished wall (*Figure 56*).

See Page 6 for Cold Climate Insulation and Page 9 for Clearances

IMPORTANT LE CANADA SEULEMENT

La conversion devra être effectuée conformément aux recommandations des autorités provinciales ayant juridiction et conformément aux exigences du code d'installation CAN1-B149.1 ET.2.

Gas conversion kits are available to adapt your appliance from the use of one type of gas to the use of another. These kits contain all the necessary components needed to complete the task including labeling that must be affixed to ensure safe operation.

Kit part numbers are listed here and the following steps detail the conversion procedure.

A WARNING

This conversion kit shall be installed by a qualified service agency in accordance with the manufacturer's instructions and all applicable codes and requirements of the authorized having jurisdiction. If the information in these instructions is not followed exactly, a fire, explosion or production of carbon monoxide may result causing property damage, personal iniury or loss of life. The installation is not proper and complete until the operation of the converted appliance is checked as specified in the owner instructions supplied with the kit. The qualified service agency performing this installation assumes responsibility for this conversion.

AVERTISSEMENT

Cet équipement de conversion sera installé par une agence qualifiée de service conformément aux instructions du fabricant et toutes exigences et codes applicables de l'autorisés avoir la juridiction. Si l'information dans cette instruction n'est pas suivie exactement, un feu, explosion ou production de protoxyde de carbone peut résulter le dommages causer de propriété, perte ou blessure personnelle de vie. L'agence qualifiée de service est esponsable de l'installation propre de cet équipment. L'installation n'est pas propre et compléte jusqu'à l'opération de l'appareil converti est chéque suivant les critères établis dans les instructions de propriétaire provisionnées avec l'équipement.

Step 1. Turn off the gas supply to the appliance.

Remove the control compartment door *(see Figure 47 on Page 27).*

Remove the front glass doorframe from the appliance *(see Figure 53 on Page 30)*.

- Step 2. Carefully remove the logs. Exercise care so as not to break the logs.
- Step 3. Refer to Figure 57.

a. Above the burner, remove the two baffle securing screws. Remove the baffle.

b. Remove the two screws securing the trapezoidal plate to the burner. Remove the plate.

c. Remove the burner assembly with attached venturi tube.

Millivolt Appliances

Step 4. SIT Systems - Refer to *Figure 58* on *Page 35* and the instructions provided with the kit. Using a Torx T20 or a flat screwdrive, remove and discard the three pressure regulator mounting screws. Remove the pressure regulator, spring, poppet, diaphragm and bushing. Discard all removed components. Ensure the rubber gasket installed on the back of the replacement pressure regulator is properly positioned and install the new pressure regulator using the new screws supplied with the kit. Tighten screws to 25 In. Ib. torgue.

- Step 5. Attach manometer to the manifold side pressure test fitting and verify manifold pressure reads 3.5 inches water column (0.87 kPa) for natural gas, and 10.0 inches water column (2.49 kPa) for propane gas.
- **Step 6.** Refer to *Figure 59* and remove the pilot hood assembly to access the hexed pilot orifice. Remove and replace the orifice with the one provided with the kit.

Electronic Appliances

Step 7. Honeywell Electronic Valves - See Figure 60 and the instructions provided with the kit. Remove the slotted cap screw, o-ring, pressure-regulating adjusting screw and spring. Retain all parts for possible later use. Install new components from the kit. Black cap and red spring for propane gas units. Silver cap and stainless steel spring for natural gas units. Before installing the cap, attach manometer to the manifold side pressure test fitting and adjust screw until pressure reads 3.5 inches water column (0.87 kPa) for natural gas, and 10.0 inches water column (2.49 kPa) for propane gas.

See *Figure 62* and replace the pilot orifice as follows: Remove the igniter assembly retainer clip, and carefully remove the igniter assembly.

Exercise extreme care to prevent damage to or breakage of the igniter assembly. Remove the screw securing the pilot assembly to its mounting bracket. Back off the flare nut at the end of the pilot gas line to free the pilot assembly from the gas line. Remove the pilot orifice and replace it with the one provided with the conversion kit. Reinstall the pilot assembly by reversing the steps detailed here.

When reinstalling the igniter assembly, use extreme care to prevent damage and breakage. Do not apply any leverage to the igniter assembly while restoring the retainer clip to its original position.

All Models

Step 8. (Refer to Figure 57 on Page 35)

- a. Remove the orifice from the manifold and replace it with the one provided in the kit. See *Table 14* for orifice sizes for natural and propane models. *Figure 61* illustrates the orifice.
- b. Retrieve the burner and hold the venturi tube above the orifice. Place the shutter adjusting rod in the propane slot of the shutter arm (see *Figure 55 on Page 31)*. Set the burner assembly into its position and secure the trapezoidal plate with the two screws previously removed.
- c. Reinstall the baffle with the two baffle securing screws.
- Step 9. Reassemble all removed components by reversing the procedures outlined in the preceding steps. Use pipe joint compound or Teflon tape on all pipe fittings before installing (ensure propane resistant compounds are used in propane applications, do not use pipe joint compounds on flare fittings).
- **Step 10**. Attach the conversion label provided in the conversion kit to the rating plate on the appliance.
- Step 11.Turn on gas supply and test for gas leaks.

NOTE: DIAGRAMS & ILLUSTRATIONS NOT TO SCALE.

LHP reserves the right to make changes at any time, without notice, in design, materials, specifications, prices and also to discontinue colors, styles and products. Consult your local distributor for fireplace code information.
