# 247 and 447 Series Pump Intercooler Modification

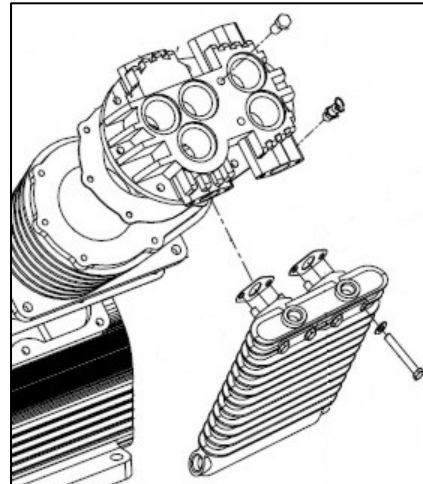

## **Product Change Notice: 12-19**

In continually improving the product, DV Systems is changing the Intercoolers as found on the '247' and '447' Pumps from the existing Copper Finned Tube to a new Cast Iron model.

The new Cooler is completely interchangeable with the existing Copper Finned Tube style, is cast iron, and simply requires (4) 3-3/4" long Hex Nuts to fasten to the Cylinder Heads.

**Older Style Copper  
Finned Tube**

**New Style Cast Iron  
Intercooler**

The older Finned Tube Intercoolers will no longer be available. To replace a Finned Tube Intercooler on an existing Pump, purchase a 'KK-9865' Intercooler Kit. The Kit contains:

- (1) 447-330 Intercooler
- (2) 445-196 Gaskets
- (4) SS-01973 3/8-16 x 3-3/4" HHCS
- (4) SS-1525 3/8" Flatwasher

Should you have any questions concerning any of the above, please contact DV Systems as follows.
