Components

- 1 High Pressure Pump
- 2 Engine
- 3 High Pressure Hose
- 4 Spray Gun
- 5 Quick-Connect Spray Wand
- 6 Detergent Siphon Hose (Fig. H)
- 7 Handle
- 8 Frame
- 9 Pump Outlet
- 10 Pump Inlet
- 11 Quick Connect Nozzles
- 12 Detergent Siphon Hose OR Detergent Tank:

Composants

- 1 Pompe à haute pression
- 2 Moteur
- 3 Boyau à haute pression
- 4 Pistolet de vaporisation
- 5 Tube de pulvérisation à branchement rapide
- 6 Boyau de produit chimique (Fig. H)
- 7 Poignée
- 8 Cadre
- 9 Sortie de la pompe
- 10 Orifice d'admission de la pompe
- 11 Buses à changement rapide
- 12 Boyau de produit chimique OU détergent réservoir

Componentes

- 1 Bomba de alta presión
- 2 Motor
- 3 Manguera de alta presión
- 4 Pistola rociadora
- 5 Varillas pulverizadoras de conexión rápido
- 6 Manga de sifon de detergente (Fig. H)
- 7 Manillar
- 8 Marco
- 9 Salida de la bomba
- 10 Entrada de la bomba
- 11 Boquillas de conexión rápida
- 12 Manga de sifon de detergente O detergente del tanque

QUICK SETUP GUIDE

⚠ WARNING: To reduce the risk of injury, read the pressure washer instruction manual and the engine instruction manual before operating pressure washer.

A Install the Handle

Slide the handle assembly onto the frame, align holes, insert saddle bolts and secure in place with knobs. Tighten until snug.

B Add/Check Oil

The engine is shipped without oil. Before starting engine, add the oil provided. Check oil level prior to each use. Refer to **Engine Owner's Manual** for complete procedure.

C Add Gasoline

In a well ventilated outdoor area add fresh, high quality, unleaded gasoline with a pump octane rating of 86 or higher. Do not overfill. Wipe up spilled fuel before starting the engine. Refer to **Engine Owners Manual** for complete procedure.

IMPORTANT: Ethanol Shield™ (sold separately) is a fuel stabilizer that helps eliminate and prevent ethanol related problems in power equipment. Follow the instructions on the container and add to the gasoline.

QUICK START GUIDE

- ⚠ DANGER:**
- Never run engine indoors or in enclosed, poorly ventilated areas. Engine exhaust contains carbon monoxide, an odorless and deadly gas.
 - Risk of fluid injection and laceration. When using the high-pressure setting, DO NOT allow the high-pressure spray to come in contact with unprotected skin, eyes or with any pets or animals. Serious injury will occur.

⚠ WARNING: Do not allow the unit to run for more than two minutes without the gun trigger being pulled. This could cause overheating and damage to the pump. When the temperature inside the pump rises too high, the thermal relief valve will open and release a spray of water from the pump to lower the internal temperature. The valve will then close.

1 Connect Garden Hose to Pump

Thread the garden hose to the pump inlet.

2 Connect High Pressure Hose to Pump

Connect the high pressure hose to the pump outlet.

3 Connect High Pressure Hose to Spray Gun

Connect the other end of the high pressure hose to the spray gun.

4 Connect Spray Wand to Spray Gun

Thread the spray wand into the end of the spray gun.

5 Connect QC Nozzles to Spray Wand

Pull quick connect coupler back and insert nozzle. Release quick connect coupler and twist nozzle to make sure it is secure in coupler.

6 Turn Water Faucet Completely On

Do not run the unit without water supply connected and turned on. Use Cold Water Only.

7 Release Air from System

Release all air from pump and high pressure hose by depressing trigger until a steady stream of water is present. Approximately 30 seconds.

8 Start engine. See **Engine Owner's Manual** for correct procedure.

WARNING: This Guide is not a substitute for reading the operator's manual. User must read and understand operator's manual before using this product.

LOOK BEFORE YOU PUMP!

Ethanol Percentage

<10% **NO** 15% — 30% — 85%

DO NOT USE FUEL CONTAINING GREATER THAN 10% ETHANOL!
 N'UTILISEZ PAS UN CARBURANT DONT LA TENEUR EN ETHANOL EST SUPERIEURE A 10%!
 ¡NO UTILICE COMBUSTIBLES QUE CONTENGAN MÁS DE 10% DE ETANOL!

WARNING: Read all safety warnings and all instructions. Failure to follow the warnings and instructions may result in electric shock, fire and/or serious injury.

WARNING: Never modify the product or any part of it. Damage or personal injury could result.

WARNING: To reduce the risk of injury, read the instruction manual.

Definitions: Safety Alert Symbols and Words

This instruction manual uses the following safety alert symbols and words to alert you to hazardous situations and your risk of personal injury or property damage.

DANGER: Indicates an imminently hazardous situation which, if not avoided, **will** result in **death or serious injury**.

WARNING: Indicates a potentially hazardous situation which, if not avoided, **could** result in **death or serious injury**.

CAUTION: Indicates a potentially hazardous situation which, if not avoided, **may** result in **minor or moderate injury**.

(Used without word) Indicates a safety related message.

NOTICE: Indicates a practice **not related to personal injury** which, if not avoided, **may** result in **property damage**.

IMPORTANT SAFETY INSTRUCTIONS

DANGER: Carbon Monoxide. Using an engine indoors can kill you in minutes. Engine exhaust contains high levels of carbon monoxide (CO), a poisonous gas you cannot see or smell. You may be breathing CO even if you do not smell engine exhaust.

- **NEVER** use an engine inside homes, garages, crawlspaces or other partly enclosed areas. Deadly levels of carbon monoxide can build up in these areas. Using a fan or opening windows and doors does **NOT** supply enough fresh air.
- **ONLY** use outdoors and far away from open windows, doors and vents. These openings can pull in engine exhaust.
- Even when the engine is used correctly, CO may leak into your home. **ALWAYS** use a battery-powered or battery backup CO alarm in your house. **Read and follow all directions for CO alarm before using.** If you feel sick, dizzy or weak at anytime, move to fresh air immediately. See a doctor. You could have carbon monoxide poisoning.

WARNING: Do not operate this unit until you read this instruction manual and the engine instruction manual for safety, operation and maintenance instructions. **If you have any questions regarding the product, please contact our customer service department at www.craftsman.com.**

DANGER: Risk of injection or severe injury. Keep clear of nozzle. Do not direct discharge stream at persons or live animals. This product is to be used only by trained operators.

WARNING: This product and its exhaust can expose you to chemicals including lead and lead compounds, and carbon monoxide, which are known to the State of California to cause cancer and birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov.

WARNING: Always wear appropriate personal hearing and other protection during use. Under some conditions and duration of use, noise from this product may contribute to hearing loss.

WARNING: This product may not be equipped with a spark-arresting muffler. If the product is not equipped, one may be purchased separately. It is a violation of California Public Resources Codes 4442 and 4443 to use or operate an internal combustion engine on any forest-covered, brush-covered, or grass-covered land unless the engine is equipped with a spark arrester, as defined in Section 4442, maintained in effective working order or the engine is constructed, equipped, and maintained for the prevention of fire pursuant to Section 4443. If an internal combustion engine is incorporated into equipment to be sold in California, the equipment may be subject to the labeling requirements of section 4442.6.

SAVE THESE INSTRUCTIONS

DANGER: RISK OF EXPLOSION OR FIRE

WHAT CAN HAPPEN

- Spilled gasoline and it's vapors can become ignited from cigarette sparks, electrical arcing, exhaust gases and hot engine components such as the muffler.
- Heat will expand fuel in the tank which could result in spillage and possible fire explosion.
- Operating the pressure washer in an explosive environment could result in a fire.

HOW TO PREVENT IT

- Shut off engine and allow it to cool before adding fuel to the tank.
- Use care in filling tank to avoid spilling fuel. Move pressure washer away from fueling area before starting engine.
- Keep maximum fuel level 1/2" (12.7 mm) below bottom of filler neck to allow for expansion.
- Operate and fuel equipment in well-ventilated areas free from obstructions. Equip areas with fire extinguisher suitable for gasoline fires.

- Materials placed against or near the pressure washer can interfere with its proper ventilation features causing overheating and possible ignition of the materials.
- Never operate pressure washer in an area containing dry brush or weeds.

DANGER: RISK OF FLUID INJECTION AND LACERATION

WHAT CAN HAPPEN

- Your pressure washer operates at fluid pressures and velocities high enough to penetrate human and animal flesh which could result in amputation or other serious injury. Leaks caused by loose fittings or worn or damaged hoses can result in injection injuries. **DO NOT TREAT FLUID INJECTION AS A SIMPLE CUT!** See a physician immediately!

HOW TO PREVENT IT

- Inspect the high pressure hose regularly. Replace the hose immediately if it is damaged, worn, has melted from contacting the engine, or shows any signs of cracks, bubbles, pinholes, or other leakage. Never grasp a high pressure hose that is leaking or damaged.
- Never touch, grasp or attempt to cover a pinhole or similar water leak on the high pressure hose. The stream of water IS under high pressure and WILL penetrate skin.
- Never place hands in front of nozzle.
- Direct spray away from self and others.
- Make sure hose and fittings are tightened and in good condition. Never hold onto the hose or fittings during operation.
- Do not allow hose to contact muffler.
- Never attach or remove wand or hose fittings while system is pressurized.
- When using replacement lances or guns with this pressure washer, do not use a lance and/or lance/gun combination that is shorter in length than what was provided with this pressure washer as measured from the nozzle end of the lance to the gun trigger.
- To relieve system pressure, shut off engine, turn off water supply and pull gun trigger until water stops flowing.
- Use only accessories rated equal to or higher than the rating of the pressure washer.

- Muffler exhaust heat can damage painted surfaces, melt any material sensitive to heat (such as siding, plastic, rubber, vinyl or the pressure hose, itself), and damage live plants.
- Always keep pressure washer a minimum of 4' (1.2 m) away from surfaces (such as houses, automobiles or live plants) that could be damaged from muffler exhaust heat.

- Improperly stored fuel could lead to accidental ignition. Fuel improperly secured could get into the hands of children or other unqualified persons.
- Store fuel in an OSHA approved container, in a secure location away from work area.

- Use of acids, toxic or corrosive chemicals, poisons, insecticides, or any kind of flammable solvent with this product could result in serious injury or death.
- Do not spray flammable liquids.

DANGER: RISK TO BREATHING (ASPHYXIATION)

WHAT CAN HAPPEN

- Breathing exhaust fumes will cause serious injury or death! Engine exhaust contains carbon monoxide, an odorless and deadly gas.
- Some cleaning fluids contain substances which could cause injury to skin, eyes or lungs.

HOW TO PREVENT IT

- Operate pressure washer in a well-ventilated area. Avoid enclosed areas such as garages, basements, etc.
- Never operate unit in or near a location occupied by humans or animals.
- Use only cleaning fluids specifically recommended for high pressure washers. Follow manufacturers recommendations. Do not use chlorine bleach or any other corrosive compound.

- Injuries can result if system pressure is not reduced before attempting maintenance or disassembly.

! DANGER: RISK OF INJURY FROM SPRAY

WHAT CAN HAPPEN

- High-velocity fluid spray can cause objects to break, projecting particles at high speed.
- Light or unsecured objects can become hazardous projectiles.

HOW TO PREVENT IT

- Always wear ANSI-approved Z87.1 safety glasses. Wear protective clothing to protect against accidental spraying.
- Never point wand at or spray people or animals.
- Always secure trigger lock when wand is not in service to prevent accidental operation.
- Never permanently secure trigger in pull-back (open) position.

! DANGER: RISK OF UNSAFE OPERATION

WHAT CAN HAPPEN

- Unsafe operation of your pressure washer could lead to serious injury or death to you or others.
- If proper starting procedure is not followed, engine can kickback causing serious hand and arm injury.

HOW TO PREVENT IT

- Do not use chlorine bleach or any other corrosive compound.
- Become familiar with the operation and controls of the pressure washer.
- Keep operating area clear of all persons, pets and obstacles.
- Do not operate the product when fatigued or under the influence of alcohol or drugs. Stay alert at all times.
- Never compromise the safety features of this product.
- Do not operate machine with missing, broken or unauthorized parts.
- Never leave wand unattended while unit is running.
- If engine does not start after two pulls, squeeze trigger of gun to relieve pump pressure. Pull starter cord slowly until resistance is felt. Then pull cord rapidly to avoid kickback and prevent hand or arm injury.

- The spray gun/wand is a powerful cleaning tool that could look like a toy to a child.
- Reactive force of spray will cause gun/wand to kickback, and could cause the operator to slip or fall or misdirect the spray. Improper control of gun/wand can result in injuries to self and others.
- Keep children away from the pressure washer at all times.
- Do not overreach or stand on an unstable support.
- Do not use pressure washer while standing on a ladder.
- Grip gun/wand firmly with both hands. Expect the gun to kickback when triggered.

! DANGER: RISK OF INJURY OR PROPERTY DAMAGE WHEN TRANSPORTING OR STORING

WHAT CAN HAPPEN

- Fuel or oil can leak or spill and could result in fire or breathing hazard. Serious injury or death can result. Fuel or oil leaks will damage carpet, paint or other surfaces in vehicles or trailers.
- Oil could fill the cylinder and damage the engine if the unit is not stored or transported in an upright position.

HOW TO PREVENT IT

- If pressure washer is equipped with a fuel shut-off valve, turn the valve to the off position before transporting to avoid fuel leaks. If pressure washer is not equipped with a fuel shut-off valve, drain the fuel from tank before transporting. Only transport fuel in an OSHA-approved container. Always place pressure washer on a protective mat when transporting to protect against damage to vehicle from leaks. Always transport and store unit in an upright position. Remove pressure washer from vehicle immediately upon arrival at your destination.

! DANGER: RISK OF ELECTRICAL SHOCK

WHAT CAN HAPPEN

- Spray directed at electrical outlets or switches, or objects connected to an electrical circuit, could result in a fatal electrical shock.

HOW TO PREVENT IT

- Unplug any electrically operated product before attempting to clean it. Direct spray away from electric outlets and switches.

! DANGER: RISK OF CHEMICAL BURN

WHAT CAN HAPPEN

- Use of acids, toxic or corrosive chemicals, poisons, insecticides, or any kind of flammable solvent with this product could result in serious injury or death.

HOW TO PREVENT IT

- Do not spray acids, gasoline, kerosene, or any other flammable materials with this product. Use only household detergents, cleaners and degreasers recommended for use with pressure washers.
- Wear protective clothing to protect eyes and skin from contact with sprayed materials.

! WARNING: RISK OF BURSTING

WHAT CAN HAPPEN

- Over inflation of tires could result in serious injury and property damage.

HOW TO PREVENT IT

- Use a tire pressure gauge to check the tires pressure before each use and while inflating tires; see the tire sidewall for the correct tire pressure.

NOTE: Air tanks, compressors and similar equipment used to inflate tires can fill small tires similar to these very rapidly. Adjust pressure regulator on air supply to no more than the rating of the tire pressure. Add air in small increments and frequently use the tire gauge to prevent over inflation.

- High-velocity fluid spray directed at pneumatic tire sidewalls (such as found on automobiles, trailers and the like) could damage the sidewall resulting in serious injury.
- On pressure washers rated above 1600 psi (11032 kPa) use the widest fan spray (40° nozzle) and keep the spray a minimum of 8" (200 mm) from the pneumatic tire sidewall. Do not aim spray directly at the joint between the tire and rim.

! WARNING: RISK OF HOT SURFACES

WHAT CAN HAPPEN

- Contact with hot surfaces, such as engines exhaust components, could result in serious burn.

HOW TO PREVENT IT

- During operation, touch only the control surfaces of the pressure washer. Keep children away from the pressure washer at all times. They may not be able to recognize the hazards of this product.

! WARNING: RISK OF INJURY FROM LIFTING

WHAT CAN HAPPEN

- Serious injury can result from attempting to lift too heavy an object.

HOW TO PREVENT IT

- The pressure washer is too heavy to be lifted by one person. Obtain assistance from others before lifting.

SAVE THESE INSTRUCTIONS FOR FUTURE USE

Get to Know the Pressure Washer

NOTE: Photographs and line drawings used in this manual are for reference only and do not represent a specific model.

Compare the illustrations with your unit to familiarize yourself with the location of various controls and adjustments. Save this manual for future reference.

Basic Elements of a Pressure Washer (Fig. A, G)

- 1 High Pressure Pump:** Increases the pressure of the water supply.
- 2 Engine:** Drives the high pressure pump. Refer to the **Engine Owner's Manual** for location and operation of engine controls.
- 3 High Pressure Hose:** Carries the pressurized water from the pump to the gun and spray wand.
- 4 Spray Gun:** Connects with spray wand to control water flow rate, direction, and pressure.
- 5 Quick-Connect Spray Wand:** Allows the user to quickly change out high pressure nozzles. See **How To Use Spray Wand** instructions in *Operation* section.
- 6 Detergent Siphon Hose (Fig. H):** Feeds cleaning agents into the pump to mix with the water. See **How To Apply Chemicals/Cleaning Solvents** instructions in *Operation* section.
- 7 Handle**
- 8 Frame**
- 9 Pump Outlet**

- 10 Pump Inlet
- 11 Quick Connect Nozzles
- 12 Detergent Tank

Basic Elements of an Engine

Refer to the **Engine Owner's Manual** for location and operation of engine controls.

NOTE: The power rating of the engine is the net power output tested on the production engine for the engine model and measured in accordance with SAE J1349 at the rated speed indicated above. Mass production engines may vary from this value. Actual power output for the engine installed in the final machine will vary depending on numerous factors, including the operating speed of the engine in applications, environmental conditions, maintenance, and other variables.

Choke Control: Opens and closes carburetor choke valve.

Starter Grip: Pulling starter grip operates recoil starter to crank engine.

Engine Switch: Enables and disables ignition system.

ASSEMBLY INSTRUCTIONS (FIG. B–E)

1. Locate and remove all loose parts from the carton.
2. Cut four corners of the carton from top to bottom and lay the panels flat.
3. Slide the handle assembly 7 onto the frame 8, align holes, insert saddle bolts and secure in place with knobs. Tighten until snug.

NOTICE: Risk of personal injury. Avoid placing hands between handle and frame when assembling to prevent pinching.

4. Remove the colored quick-connect nozzles 11 from the plastic bag and insert them into correct grommet on the nozzle holder. Nozzles are color coded to match colored nozzles on label 17.
5. Connect wand 5 to gun 4. Tighten securely.
6. Attach high pressure hose 3 to gun 4. Tighten securely.

NOTE: The pump on this unit is maintenance free and requires no oil. If there is a problem with the pump, visit our website at www.dewalt.com for a list of service centers, or call DeWALT at 1-877-362-4271.

NOTICE: The engine is shipped without oil. Before starting engine, add the oil provided. Damage to the engine will occur if the engine is run without oil, this damage will not be covered under warranty.

OPERATION

Pressure Washer Terminology

PSI*: Pounds per Square Inch. The unit of measure for water pressure. Also used for air pressure, hydraulic pressure, etc.

GPM*: Gallons per Minute. The unit of measure for the flow rate of water.

* Complies with CETA Performance Standard CPC-100.

Bypass Mode: Allows water to re-circulate within the pump when the gun trigger is not pulled. This feature allows the operator to release the trigger gun and reposition themselves without having to turn the engine off in between cleaning actions.

WARNING: Do not allow the unit to run for more than two minutes without the gun trigger being pulled. This could cause overheating and damage to the pump. When the temperature inside the pump rises too high, the thermal relief valve will open and release a spray of water from the pump to lower the internal temperature. The valve will then close.

Thermal Relief Valve (Fig. F): When the temperature inside the pump rises too high, this valve will open and release a gush of water in an effort to lower the temperature inside the pump. The valve will then close. **NOTE:** Thermal relief valve 16 location will vary depending on the pump type.

Detergent Injection System: Mixes cleaners or cleaning solvents with the water to improve cleaning effectiveness.

Water Supply: All pressure washers must have a source of water. The minimum requirements for a water supply are 20 psi and 5 Gallons Per Minute. If your water source is a well, the garden hose length can only be 30 ft. (9 m) max.

WARNING: To reduce the possibility of contamination always protect against backflow when connected to a potable water system.

Pressure Washer Operating Features

Pressure Adjustments

The pressure setting is preset at the factory to achieve optimum pressure and cleaning. If you need to lower the pressure, it can be accomplished by these methods.

1. **Back away from the surface to be cleaned.** The further away you are, the less the pressure will be on the surface to be cleaned.
2. **Change to the 40° nozzle (white).** This nozzle delivers a less powerful stream of water and a wider spray pattern. Refer to **How To Use Spray Wand**.

NOTICE: DO NOT attempt to increase pump pressure. A higher pressure setting than the factory set pressure may damage pump.

How To Use Spray Wand

The nozzles for the spray wand are stored in the nozzle holder on the panel assembly. Colors on the panel identify nozzle location and spray pattern. Refer to the following chart to choose the correct nozzle for the job to be performed. **NOTE:** Some models may not include all of the nozzles shown in the chart.

Changing Nozzles on Spray Wand (Fig. G)

DANGER: Risk of fluid injection. Do not direct discharge stream toward persons, unprotected skin, eyes or any pets or animals. Serious injury will occur.

WARNING: Flying objects could cause risk of serious injury. Do not attempt to change nozzles while pressure washer is running. Turn engine off before changing nozzles.

1. Pull quick-connect coupler **5** back and insert nozzle **11**.
2. Release quick-connect coupler and twist nozzle to make sure it is secure in coupler.

WARNING: Flying object could cause risk of serious injury. Ensure nozzle is completely inserted in quick-connect socket and quick-connect collar is fully engaged (forward) before squeezing gun trigger.

Nozzle Color	Spray Pattern	Uses	Surfaces**
Red (if equipped)	0° 	powerful pinpoint for spot cleaning of hard, unpainted surfaces or for high reach areas	unpainted metal or concrete; DO NOT use on wood
Yellow (if equipped)	15° 	intense cleaning of unpainted hard surfaces	grills, driveways, concrete or brick walkways, unpainted brick or stucco
White (if equipped)	40° 	cleaning of painted or delicate surfaces	auto/RV, marine, wood, painted brick and stucco, vinyl, painted siding
Black (if equipped)	low pressure 	applies cleaning solutions	Low pressure spray is safe on all surfaces. Always verify compatibility of cleaning solution prior to use.
Blue (if equipped)	Second story rinse nozzle	For second story cleaning	metal, concrete or wood
<p>**NOTICE: The high pressure spray from your pressure washer is capable of causing damage to surfaces such as wood, glass, automobile paint, auto striping and trim, and delicate objects such as flowers and shrubs. Before spraying, check the item to be cleaned to assure yourself that it is strong enough to resist damage from the force of the spray.</p>			

How to Apply Chemicals/Cleaning Solvents (Fig. A, H)

Applying chemicals or cleaning solvents is a low pressure operation. **NOTE:** Use only soaps and chemicals designed for pressure washer use. **Do not use bleach.**

To Apply Chemicals (Siphon Hose, if equipped) (Fig. H)

1. Ensure detergent siphon hose **6** is attached to barbed fitting location near high pressure hose connection of pump as shown.
2. Place other end of detergent siphon hose with filter on it into container holding chemical/cleaning solution.

NOTE: For every 7 gallons of water pumped 1 gallon of chemical/cleaning solution will be used.

3. Install the black low pressure nozzle into the quick connect fitting of the spray wand. See **How To Use Spray Wand** paragraph in this section.

NOTE: After squeezing the trigger it will take approximately 5 seconds for the detergent to appear.

4. After use of chemicals, place detergent siphon hose into container of clean water and draw clean water through chemical injection system to rinse system thoroughly. If chemicals remain in the pump it could be damaged. Pumps damaged due to chemical residue will not be covered under warranty.

NOTE: Chemicals and soaps will not siphon if the black soap nozzle is not installed on the spray wand.

To Apply Chemicals (Detergent Tank, if equipped) (Fig. A):

1. Remove the cap from the detergent tank **12** and fill the detergent tank with cleaning solvent. Replace cap on detergent tank. **NOTE:** For every 7 gallons of water pumped 1 gallon of chemical/cleaning solution will be used.
2. Install the black low pressure nozzle into the quick connect fitting of the spray wand. See **How To Use Spray Wand** paragraph in this section.

NOTE: After squeezing the trigger it will take approximately 5 seconds for the detergent to appear.

3. After use of chemicals, fill the detergent tank with clean water and draw clean water through chemical injection system to rinse system thoroughly. If chemicals remain in the pump it could be damaged. Pumps damaged due to chemical residue will not be covered under warranty.

NOTE: Chemicals and soaps will not siphon if the black soap nozzle is not installed on the spray wand.

Starting (Fig. I–L)

WARNING: To reduce the risk of injury, read the pressure washer instruction manual and the engine instruction manual before starting pressure washer.

DANGER: Risk of fluid injection and laceration. When using the high pressure setting, DO NOT allow the high pressure spray to come in contact with unprotected skin, eyes, or with any pets or animals. Serious injury will occur.

- Your washer operates at fluid pressures and velocities high enough to penetrate human and animal flesh, which could result in amputation or other serious injury. Leaks caused by loose fittings or worn or damaged hoses can result in injection injuries. **DO NOT TREAT FLUID INJECTION AS A SIMPLE CUT!** See a physician immediately!

DANGER: Carbon Monoxide. Using an engine indoors can kill you in minutes. Engine exhaust contains high levels of carbon monoxide (CO), a poisonous gas you cannot see or smell. You may be breathing CO even if you do not smell engine exhaust.

- Breathing exhaust fumes will cause serious injury or death! Engine exhaust contains carbon monoxide, an odorless and deadly gas.
- Operate pressure washer in a well-ventilated area. Avoid enclosed areas such as garages, basements, etc.
- Never operate unit in or near a location occupied by humans or animals.

WARNING: Risk of Fire, Asphyxiation and Burn. Never fill fuel tank when engine is running or hot. Do not smoke when filling fuel tank.

- Never fill fuel tank completely. Fill tank to 1/2" (12.7 mm) below bottom of filler neck to provide space for fuel expansion. Wipe any fuel spillage from engine and equipment before starting engine.
- **DO NOT** let hoses come in contact with very hot engine muffler during or immediately after use of your pressure washer. Damage to hoses from contact with hot engine surfaces will **NOT** be covered by warranty.

NOTICE: Risk of property damage. Never pull water supply hose to move pressure washer. This could damage hose and/or pump inlet.

- **DO NOT** use hot water, use cold water only.
- Never turn water supply off while pressure washer engine is running or damage to pump will result.
- **DO NOT** stop spraying water for more than two minutes at a time. Pump operates in bypass mode when spray gun trigger is not pressed. If pump is left in bypass mode for more than two minutes internal components of the pump can be damaged.

If you do not understand these precautions, visit our website at www.dewalt.com for a list of service centers, or call DEWALT at 1-877-362-4271.

Prior to starting, refer to your engine manual for proper starting procedure.

1. In a well ventilated outdoor area add fresh, high quality, unleaded gasoline with a pump octane rating of 86 or higher. Do not overfill. Wipe up spilled fuel before starting the engine. Refer to **Engine Owner's Manual** for correct procedure.

IMPORTANT: Ethanol Shield™ (sold separately) is a fuel stabilizer that helps eliminate and prevent ethanol related problems in power equipment. Follow the instructions on the container and add to the gasoline.

NOTICE: Use of fuels with greater than 10% ethanol are not approved for use in this product per EPA regulations and will damage the unit and void the warranty.

2. Check engine oil level. See **Engine Owner's Manual** for correct procedure.
3. Connect the water hose to the water source. Turn the water source on to remove all air from the hose. When a steady stream of water is present, turn the water source off.

4. Verify the filter screen **13** is in water inlet of pump.

NOTE: Convex side faces out.

5. Connect water source **14** to pump inlet **10**.

NOTE: Water source must provide a minimum of 5 gallons per minute at 20 psi.

6. Connect high pressure hose **3** to pump outlet **9**.

WARNING: To reduce the possibility of contamination always protect against backflow when connected to a potable water system.

7. Choose the correct nozzle for the job to be performed. See **How To Use spray Wand** instructions in this section.

NOTE: If applying a chemical or cleaning solution, see **How To Apply Chemicals/Cleaning Solvents** instructions in this section.

8. Turn water source on.

NOTICE: Risk of property damage. Failure to do so could cause damage to the pump.

9. Remove all air from the pump and high pressure hose by depressing trigger until a steady stream of water is present.

10. Start engine. See **Engine Owner's Manual** for correct procedure.

WARNING: Risk of unsafe operation. If engine does not start after two pulls, squeeze trigger of gun to relieve pump pressure. Pull starter cord slowly until resistance is felt. Then pull cord rapidly to avoid kickback and prevent hand or arm injury.

11. Depress trigger on gun to start water flow.

WARNING: Risk of unsafe operation. Stand on a stable surface and grip gun/spray wand firmly with both hands. Expect the gun to kick when triggered.

12. Release trigger to stop water flow.

 **WARNING:** Do not allow the unit to run for more than two minutes without the gun trigger being pulled. This could cause overheating and damage to the pump. When the temperature inside the pump rises too high, the thermal relief valve will open and release a spray of water from the pump to lower the internal temperature. The valve will then close.

 **WARNING:** Risk of injury from spray. Always engage the trigger lock **15** when gun is not in use. Failure to do so could cause accidental spraying.

Shutting Down

1. After each use, if you have applied chemicals, place detergent siphon hose into container of clean water and draw clean water through chemical injection system to rinse system thoroughly.

NOTICE: Risk of property damage. Failure to do so could cause damage to the pump.

2. Turn engine off. See **Engine Owner's Manual**.

NOTICE: Risk of property damage. NEVER turn the water off with the engine running.

3. Turn water source off.
4. Pull trigger on spray gun to relieve any water pressure in hose or spray gun.

NOTE: Failure to release system pressure will prevent removal of high pressure hose from spray gun or pump connection.

5. See **Storage** section in this manual for proper storage procedures.

MAINTENANCE

 **WARNING:** Risk of burn hazard. When performing maintenance, you may be exposed to hot surfaces, water pressure or moving parts that can cause serious injury or death.

 **WARNING:** Risk of fire hazard. Always disconnect, spark plug wire, let the engine cool and release all water pressure before performing any maintenance or repair. The engine contains flammable fuel. Do not smoke or work near open flames while performing maintenance.

To ensure efficient operation and longer life of your pressure washer, a routine maintenance schedule should be prepared and followed. If the pressure washer is used in unusual conditions, such as high-temperatures or dusty conditions, more frequent maintenance checks will be required.

Engine

Consult the **Engine Owner's Manual** for the manufacturer's recommendations for any and all maintenance. **NOTE:** The engine drain plug is located at the rear of the unit.

Pump

The pump was filled with oil at the factory. The pump on this unit is maintenance free and requires no oil to be added or changed. If there is a problem with the pump, visit our website at www.dewalt.com for a list of service centers, or call DEWALT at 1-877-362-4271.

Connections

Connections on pressure washer hoses, gun and spray wand should be cleaned regularly and lubricated with light oil or lithium grease to prevent leakage and damage to the o-rings.

Nozzle Cleaning (Fig. M)

If the nozzle becomes clogged with foreign materials, such as dirt, excessive pressure may develop. If the nozzle becomes partially clogged or restricted, the pump pressure will pulsate. Clean the nozzle immediately using the nozzle kit supplied and the following instructions:

1. Shut off the pressure washer and turn off the water supply.
2. Pull trigger on gun handle to relieve any water pressure.
3. Disconnect the spray wand from the gun.
4. Remove the high pressure nozzle **11** from the spray wand. Remove any obstructions with the nozzle cleaning tool provided and backflush with clean water.
5. Direct water supply **14** into nozzle to backflush loosened particles for 30 seconds.
6. Reassemble the nozzle to the wand.
7. Reconnect spray wand to gun and turn on water supply.
8. Start pressure washer and place spray wand into high pressure setting to test.

Clean the Water Inlet Filter (Fig. I)

This screen filter should be checked periodically and cleaned if necessary.

1. Remove filter **13** by grasping end and removing it from water inlet of pump.
2. Clean filter by flushing it with water on both sides.
3. Re-insert filter into water inlet of pump. **NOTE:** Cone side faces out.

NOTE: Do not operate the pressure washer without filter properly installed.

STORAGE

Engine

Consult the **Engine Owner's Manual** for manufacturer's recommendations for storage.

To Prevent Fuel-Related Problems

1. Add Ethanol Shield™ fuel stabilizer following the manufacturer's instructions. When adding a gasoline stabilizer, fill the fuel tank with fresh gasoline. If only partially filled, air in the tank will promote fuel deterioration during storage. If you keep a container of gasoline for refueling, be sure that it contains only fresh gasoline.

2. After adding a gasoline stabilizer, run the engine outdoors for 10 minutes to be sure that treated gasoline has replaced the untreated gasoline in the carburetor.
3. Turn the fuel valve to the OFF position.
4. Continue to run the engine until it stops from the lack of fuel in the carburetor fuel bowl. Running time should be less than 3 minutes.

Pump

The manufacturer recommends using DeWALT Pump Guard or equivalent when storing the unit for more than 30 days and/or when freezing temperatures are expected. DeWALT Pump Guard is environmentally friendly.

NOTE: Using pump guard helps provide proper lubrication to the internal seals of the pump regardless of temperature or environment.

NOTICE: Risk of property damage. Use only DeWALT Pump Guard or equivalent. Other products could be corrosive and/or contain alcohol which may cause pump damage.

1. Turn off pressure washer and disconnect hoses from pump.
2. Unscrew bottle valve from Pump Guard bottle and remove seal.
3. Screw bottle valve back onto bottle.
4. Attach bottle to water inlet of pump.
5. Squeeze bottle to inject contents into pump.
6. With ignition switch off, simultaneously pull starter rope and squeeze bottle. Repeat until protector fluid exits pump outlet. **NOTE:** This step may require two people.

Pressure Washer

1. Drain all water from high pressure hose and wrap it onto hose wrap.
2. Drain all water from the spray gun and wand by holding spray gun in a vertical position with nozzle end pointing down and squeezing trigger. Store in gun holder.
3. Wrap up and secure detergent siphon hose so it is protected from damage.

Accessories

DANGER: Risk of fluid injection. When using replacement spray wands or guns with this pressure washer, DO NOT use a spray wand and/or spray gun/wand combination that is shorter in length than what was provided with this pressure washer as measured from the nozzle end of the wand to the gun trigger.

WARNING: Since accessories, other than those offered by DeWALT, have not been tested with this product, use of such accessories with this tool could be hazardous. To reduce the risk of injury, only DeWALT recommended accessories should be used with this product.

Recommended accessories for use with your tool are available at extra cost from your local dealer or authorized service center. If you need assistance in locating any accessory, please contact DeWALT, call 1-877-362-4271.

Repairs

WARNING: To assure product SAFETY and RELIABILITY, repairs, maintenance and adjustment (including brush inspection and replacement, when applicable) should be performed by a DeWALT factory service center or a DeWALT authorized service center. Always use identical replacement parts.

To find the nearest service center, please contact DeWALT, call 1-877-362-4271.

Cleaning

WARNING: Blow dirt and dust out of all air vents with clean, dry air at least once a week. To minimize the risk of eye injury, always wear ANSI Z87.1 approved eye protection when performing this.

WARNING: Never use solvents or other harsh chemicals for cleaning the non-metallic parts of the tool. These chemicals may weaken the plastic materials used in these parts. Use a cloth dampened only with water and mild soap. Never let any liquid get inside the tool; never immerse any part of the tool into a liquid.

Register Online

Thank you for your purchase. Register your product now for:

- **WARRANTY SERVICE:** Registering your product will help you obtain more efficient warranty service in case there is a problem with your product.
- **CONFIRMATION OF OWNERSHIP:** In case of an insurance loss, such as fire, flood or theft, your registration of ownership will serve as your proof of purchase.
- **FOR YOUR SAFETY:** Registering your product will allow us to contact you in the unlikely event a safety notification is required under the Federal Consumer Safety Act.

LIMITED WARRANTY

90 DAY LIMITED WARRANTY ON PRODUCT COMPONENTS

The manufacturer warrants to the original purchaser that the wheels, gun, hose, wand, spray nozzle(s) and other components of the pressure washer covered under this warranty are free from defects in material and workmanship for 90 days from the date of purchase.

TWO YEAR LIMITED WARRANTY ON PUMP

The manufacturer warrants to the original purchaser that the pump of the pressure washer covered under this warranty is free from manufacturer's defects in material and workmanship for two years from the date of purchase. The two year limited warranty applies to the pump only.

FIVE YEAR LIMITED WARRANTY ON FRAME

The manufacturer warrants to the original purchaser that the frame of the pressure washer covered under this warranty is free from manufacturer's defects in material and workmanship for five years from the date of purchase. The five year limited warranty applies to the frame only.

The manufacturer will repair or replace, at the manufacturer's option, products or components which have failed within the above warranty periods. Service will be scheduled according to the normal work flow and business hours at the service center location, and the availability of replacement parts. All decisions of the manufacturer with regard to this limited warranty shall be final.

This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

ENGINE WARRANTY

The engine, emission control system and related components are covered under the terms and conditions outlined by the engine manufacturer's warranty and are the sole responsibility of the engine manufacturer. A copy of the engine manufacturer's warranty has been provided to you with your pressure washer. Please consult the engine manufacturer's warranty to process a claim or obtain service to the engine, emission control system or related components.

RESPONSIBILITY OF ORIGINAL PURCHASER (Initial User):

- To process a warranty claim on your pressure washer, report the concern to **or** for authorization and direction to the nearest authorized service centre in your area.
- Retain original cash register sales receipt as proof of purchase for warranty work.
- Use reasonable care in the operation and maintenance of the product as described in the Owners Manual(s).

THIS WARRANTY DOES NOT COVER:

- Merchandise sold as reconditioned, used as rental equipment, used for commercial purposes or commercial applications, or floor or display models.
- Merchandise that has become damaged or inoperative because of ordinary wear, misuse, cold, heat, rain, excessive humidity, water quality, freeze damage, use of improper chemicals, negligence, accident, failure to operate the product in accordance with the instructions provided in the Owners Manual(s) supplied with the product, improper maintenance, the use of accessories or attachments not recommended by the manufacturer, or unauthorized repair or alterations.
- Repair and transportation costs of merchandise determined not to be defective.
- Damage due to chemical deterioration, scale build up, rust, corrosion or thermal expansion
- Costs associated with assembly, required oil, adjustments or other installation and start-up costs.
- Expendable parts or accessories supplied with the product which are expected to become inoperative or unusable after a reasonable period of use, including but not limited to springs, nozzles, o-rings, washers, and similar accessories.
- Merchandise sold by the manufacturer which has been manufactured by and identified as the product of another company, such as gasoline engines. The product manufacturer's warranty, if any, will apply.
- **ANY INCIDENTAL, INDIRECT OR CONSEQUENTIAL LOSS, DAMAGE, OR EXPENSE THAT MAY RESULT FROM ANY DEFECT, FAILURE OR MALFUNCTION OF THE PRODUCT IS NOT COVERED BY THIS WARRANTY.** Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you.
- **IMPLIED WARRANTIES, INCLUDING THOSE OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, ARE LIMITED TO ONE YEAR FROM THE DATE OF ORIGINAL PURCHASE.** Some states do not allow limitations on how long an implied warranty lasts, so the above limitations may not apply to you.

TROUBLE SHOOTING GUIDE

BE SURE TO FOLLOW SAFETY RULES AND INSTRUCTIONS

For assistance with your product, visit our website at www.dewalt.com for a list of service centers, or call DEWALT at 1-877-362-4271.

Operational Issue	Possible Cause	SOLUTION
Engine will not start (see Engine Owner's Manual for further engine troubleshooting)	No fuel.	Add fresh fuel.
	Pressure builds up after two pulls on the recoil starter or after initial use	Squeeze gun trigger to relieve pressure
	Choke lever in the "No Choke" position	Move choke to the "Choke" position
	Spark plug wire not attached.	Attach spark plug wire.
	Engine switch in OFF position	Place engine switch in ON position
	Choke lever in the "Choke" position on a "hot" engine or an engine that has been exposed to thermal heat for a long period of time	Move choke to the "No Choke" position
No or low pressure (initial use)	Spray wand not in high pressure	See How to Use Spray Wand instructions in the Operation Section
	Low water supply	Water supply must be at least 5 gpm @ 20 psi
	Leak at high pressure hose fitting	Repair leak. Apply sealant tape if necessary
	Nozzle obstructed	See Nozzle Cleaning instructions in the Maintenance section
	Water filter screen clogged	Remove and clean filter. See Cleaning Water Inlet Filter paragraph in the Maintenance section for the correct procedure
	Air in hose	Turn off the engine, then the water source. Disconnect the water source from the pump inlet and turn the water source on to remove all air from the hose. When there is a steady stream of water present, turn water source off. Re-connect water source to pump inlet and turn on water source. Squeeze trigger to remove remaining air
	Choke in the "Choke" position	Move choke to the "No Choke" position
	High pressure hose is too long	Use high pressure hose under 100 feet (30 m)
Will not draw chemicals	Spray wand not in low pressure	See How to Use Spray Wand paragraph in the Operation Section
	Chemical filter clogged	Clean filter
	Chemical screen not in cleaning solution	Make sure end of detergent siphon hose is fully submerged into cleaning solution
	Chemical too thick	Dilute chemical. Chemical should be the same consistency as water
	Pressure hose is too long	Lengthen water supply hose instead of high pressure hose
	Chemical build up in chemical injector	Please contact service center.
No or low pressure (after period of normal use)	Worn seal or packing	Please contact service center.
	Worn or obstructed valves	Please contact service center.
	Worn unloader piston	Please contact service center.
Water leaking at gun/spray wand connection	Worn or broken o-ring	Check and replace
	Loose hose connection	Tighten
Water leaking at pump	Loose connections	Tighten
	Piston packings worn	Please contact service center.
	Worn or broken o-rings	Please contact service center.
	Pump head or tubes damaged from freezing	Please contact service center.
Pump pulsates	Nozzle obstructed	See Nozzle Cleaning paragraph in the Maintenance section for the correct procedure
