Please read and save these instructions. Read carefully before attempting to assemble, install, operate or maintain the product described. Protect yourself and others by observing all safety information. Failure to comply with instructions could result in personal injury and/or property damage! Retain instructions for future reference.

Description

Plunger Pumps are designed for a wide variety of high pressure washing applications. They are constructed with die-cast bodies and feature a brass head. Internal components include special thick solid ceramic plungers for long life and durability. Precision cast cooling fins are anodized for maximum heat dissipation. Oversized needle bearings on the drive side, and ball on the non-drive side together with the precision supports assure positive alignment and centering in relation to the crankcase. Valve cages of special designed Ultra-Form provide positive seating and extended life. Ball bearings on both sides of solid shaft drive pumps. One-piece connecting rods are special alloy aluminum, oversized for strength and load disbursement. These pumps are designed for gearbox, belt drive, or coupling drive systems driven by eletric motor or gasoline driven systems, gasoline engine driven systems.

 $PSI \times .06896 = Bar$

Bar x 14.5038 = PSI

1 inches = 25.4 millimeters

Liters x.2642 = Gallons (US)

Ft. Lbs. x 1.356 = Newton Meters

Inch Lbs. x .11298 = Newton Meters

Newton Meters x .737562 = Ft. Lbs. (force)

Newton Meters x 8.85 = In. Lbs. (force)

Temperature = $1.8(C^{\circ} + 17.78) = F^{\circ},.555(F^{\circ})$ $-32) = C^{\circ}$

1 U.S. Gallon of freshwater = 8.33 lbs.

1 PSI = 2.31 feet of water

1 PSI = 2.04 inches of mercury

1 Foot of water = .433 PSI

1 Foot of water = .885 inches of mercury

1 Meter of water = 3.28 feet of water

Kilograms x 2.2 = Lbs.

General Safety Information

Gasoline Drive Pumps

The pump is designed to pump nonflammable or non-explosive fluids.

These pumps are intended to pump clean filtered water only.

Do not operate in or around an explosive environment.

Always wear safety glasses or goggles and appropriate clothing.

Do not alter the pump from the manufacturers design.

Do not allow children to operate the pump.

Never point the high-pressure discharge at a person, any part of the body or animals.

Do not operate gasoline engines in a confined area; always have adequate ventilation.

Do not exceed the pump specifications in speed or pressure.

General Safety Information (continued)

Maximum water temperature is

All positive displacement plunger pumps must have a safety relief valve installed on the discharge side of the pump, this valve could be either an unloader or regulator and must be of adequate flow and pressure for the pump.

Adequate protective guards must cover all moving parts. Perform routine maintenance on the pump and components.

Use only components that are rated for the flow and pressure of the pump, this would include hose, fittings, safety valves, spray guns etc.

Electric Drive Pumps

Your power supply must conform to the system requirements.

The motor must be grounded. Use GFCI plugs and receivers.

Do not handle the pump/motor with wet hands.

Only use power cords that are in good condition.

 $^{\prime 1}$ Never pull the unit by the power cord.

Never spray or clean the unit with water

Failure to follow these warnings may result in personal injury or damage to property.

Special Features

Wet End

Manifold: Forged Brass: Strength and no porosity equals long life. Higher hydrostatic pressures, safety and performance. Inlet and Discharge Ports: Heavy bosses for added strength. Offset Discharge Ports: High efficiency, smooth flow. Bolts: Eight bolts, 6mm. grade 12.9.

Valves: Ultra Form Cages: Durability, strength and long life. Poppets, Seat and Spring: 303 and 400 series stainless steel. Valve Caps: Machined brass - greater strength.

Packing and Plungers: High Pressure Packing: "V" style (D-1) Buna-N (cotton duct weave base) strong and tightens under load. Low Pressure Seals: "U" cup double lip Buna-N, good positive seal. Support Guides: Machined brass, two-piece construction to assure proper plunger alignment and to maximize packing and seal life. Plungers: Are a special aluminum oxide blend, solid ceramic for long life, strong durability and more resilient.

Drive End

Bearings: Oversized for maximum life and load disbursement, needle bearing on the drive side and ball on the non-drive side. Each bearing is held in position on the crankshaft and crankcase by snap rings. This assures positive alignment and centering of the connecting rods and crankshaft in relation to the crankcase, it also eliminates the crankshaft from floating.

Special Features (continued)

Crankcase: Precision die-cast, large cooling fins and anodized (for maximum heat dissipation).

Rear Cover: precision die-cast, O-ring sealed and bayonet style sight glass for positive sealing and locking (no threads to loosen).

Plunger Rods: Stainless steel construction for strength (no plating to scrape off). O-ring plunger sealing system.

Rod Pins: Precision ground and hardened steel, oversized for load disbursement.

Connecting Rods: One-piece special alloy aluminum based, oversized for maximum strength, load disbursement, and life. Heavy pin area construction, for added load strength.

Crankshaft: Forged, precision ground and hardened for extremely long life and durability.

Oil Seals and O-rings: All are constructed of Buna-N rubber. The Orings have stainless steel garder springs to assure constant tension on the sealing surface.

Oil Capacity: 14.5 oz., refer to parts breakdown.

Extra Features

Dyno Proven: All pumps are dyno tested to assure the theoretical design meets the actual design.

Valve Design: Each pump series has a valve design that optimizes its highest efficiency.

Hot Water: High temperature kits are

available to 180° F. Refer to breakdown

Wet End Repair: Very simple no special tools are required.

Mounting Bolt Pattern: Same on the top and bottom of the crankcase for simple drive side change.

Design: Using advanced fluid handling design programs. Overall pump efficiency is increased.

Installation

Direct Drive Gasoline Pumps

- 1. Install the shaft key into the keyway and apply a light coating of anti-seize on the engine shaft. (See Figure 4 & 5)
- Align the two key ways and push the pump completely onto the engine.

3. Install all four (4) bolts and tighten evenly.

4. Remove the red shipping oil cap and install the black crankcase vent cap. (See Figure 6)

5. Install the appropriate unloader valve and other accessories.

Figure 6

Figure 5

Figure 4

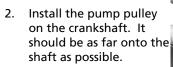

6. Install the appropriate water inlet and discharge fittings.

Installation (continued)

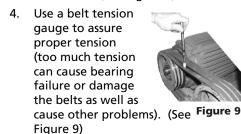

- 7. Connect the water supply hose and high-pressure discharge hose/spray gun.
- 8. Turn on the water supply.
- 9. Open the spray gun to purge the system of any air.
- 10. Start the engine.
- 11. Adjust the engine speed and unloader valve.

Belt Drive Systems

- Mount the pump securely to the base plate. (See Figure 7) For new installation a mounting rail kit
 - is required, refer to parts breakdown.

Align the pulleys so they 3. are in line. (See Figure 8)

5. Installation complete.

Winter or Long Time Storage

Drain all of the water out of the pump.

- 2. Run a 50% solution of a RV or non-toxic/biodegradable antifreeze through the pump.
- 3. Flush the pump with fresh water before the next use.
- 4. In freezing conditions failure to do this may cause internal pump damage.
- For long periods of storage in non-freezing areas the solution will keep the seals and O-rings lubricated.

Service Pumps

Servicing the Valves

The inlet and discharge valves in this series pumps are all the same. The valves are located under the six 21mm hex plugs. The inlet valves are located on the lower row and the discharge valves are located on the top row of the pump head.

Tools required: 21mm socket, ratchet, needle nose pliers, mechanics pick and torque wrench.

Valve Removal:

- Remove the valve cap. (See Figure 10)
- 2. Inspect the valve cap O-ring for any damage, replace if necessary.
- 3. Use the needle nose pliers to remove the valve. (See Figure 11)

Figure 11

Figure 7

Figure 8

Service Pumps (continued)

- Use a small probe to move the poppet up and down to assure that the valve is functioning properly and that no debris is stuck in the valve. (See Figure 12)
- Figure 12

Using the mechanics pick remove the valve seat O-ring and inspect for any damage, replace if necessary.

Figure 13 3.

Valve Assembly:

(See Figure 13)

Install the valve seat O-ring squarely into the bottom of the manifold. (See Figure 14)

Figure 14 2. Insert the valve assembly

squarely into the port pushing it into the O-ring. (See Figure 15)

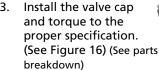

Figure 15

Servicing the Packings/Seals

To access the water seals for inspection or replacement, you will first need to remove the head of the pump.

Figure 16

Tools required: 5mm hex socket, ratchet, (2) long screwdrivers, reversible pliers, mechanics pick and torque wrench.

Disassembly:

- First remove the eight 5mm head bolts. (See Figure 17)
- 2. Place the screwdrivers as shown between the head and crankcase of the pump, lifting one up and the other down. The head Figure 17

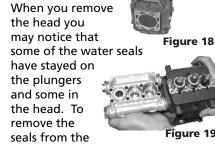

Figure 19

plungers simple turn the assemblies and pull off. (See Figure 19)

If the seal assemblies are in the

head use the reversible pliers to grab the seal retainer on the outside ring, twist the retainer in either direction (this is done to free the retainer O-ring which is stuck to the manifold) and lift out. (See Figure 20 & 21)

Service Pumps (continued)

- With your finger pull out the brass intermediate guide ring. (See Figure
 - Figure 22
- 6. With your finger pull the high-pressure seal and head ring out of the head. (See Figure 23)
- 7. The low-pressure seal is located in the brass seal retainer. Using the mechanics pick, go in between the seal and retainer and pull the seal (straight out. (See Figure 24)

Figure 23

Remove the seal retainer 8. O-ring with the mechanics pick. (See Figure 25)

Figure 24

Assembly:

Install the plastic head ring into the head (the flat side is on the bottom) (See Figure 26)

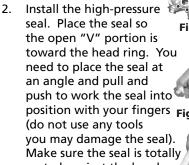

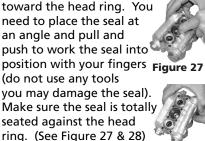

Figure 26

Place the brass 3. intermediate ring squarely over the highpressure seal. (See Figure 29)

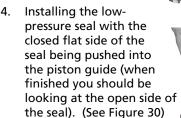

Figure 29

Figure 30

- Install the retainer O-ring. (See Figure 31)
- 6. Squarely seat the retainer into the head and push with even pressure until it snaps into position. (See Figure 32)

Servicing the **Plungers**

If the plungers are not damaged they do not need any servicing.

Tools required: 13mm socket, ratchet, mechanics pick, taper blade gasket scraper, thread sealant and torque wrench.

NOTE: Be very careful when working with the plungers, they are made from ceramic which is brittle and can be damaged.

Any time you remove a plunger it is recommended you replace the slinger washer, O-ring and top plunger washer. The washers are a cushion for the ceramic plunger and compress

Service Pumps (continued)

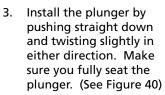

when first used and the O-ring will take a set to create a seal and usually will not spring back to its original shape. By not replacing these parts you run the risk of breaking a plunger or having a water leak.

Disassembly:

- Remove the plunger retainer nut. (See Figure 33)
- 2. Insert the gasket scraper between the copper washer and plunger to remove the washer. (See Figure
- Twist and pull the plunger off the plunger rod. (See Figure 35)
- Remove the plunger 4. rod O-ring seal with the mechanics pick. (See Figure 36)
- 5. Remove the brass slinger. At this point clean any thread locker that is left on the plunger rod and retaining nut threads. (See Figure 37)

Assembly:

- Install the brass slinger washer. (See Figure 38)
- 2. Install the plunger rod O-ring. Place a light film of oil on the O-ring. (See Figure 39)

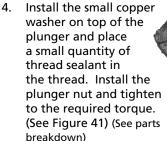

Figure 38

Figure 39

Pump Head to Drive End Installation Figure 41

- Turn the crankshaft to align the plungers as shown. (See Figure 42)
- Place the head evenly onto the plungers and push it until it makes contact with Figure 42 the drive end of the pump. (See Figure

43)

Figure 43

Figure 36

Figure 33

Figure 34

Figure 35

Service Pumps (continued)

3. Torque the head bolt as shown in the tightening sequence diagram. (See Figure 44 & 45) (See parts breakdown)

Figure 44

Figure 45

Oil Change

Change oil after first 50 hours of use. Then every 500 hours. Refer to parts breakdown for oil type.

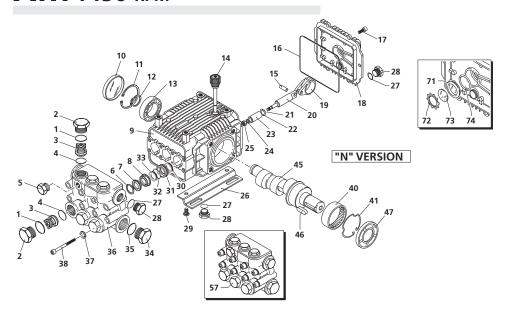

Troubleshooting

| Symptom | | Possible Cause(s) | | Corrective Action |
|--|---|---|---|---|
| Oil leak between crankcase and pumping section | | Worn rod oil seals | | Replace crankcase piston rod seals |
| Frequent or prema- ture failure of the packing | | Cracked, damaged or worn plunger | 1 | Replace plungers |
| | 2 | Overpressure to inlet manifold | 2 | Reduce inlet pressure |
| | 3 | Material in the fluid being pumped | 3 | Install proper filtration on pump inlet plumbing |
| | 4 | Excessive pressure and/or temperature of fluid being pumped | 4 | Check pressures and fluid inlet temperature; be sure they are within specified range |
| | 5 | Running pump dry | 5 | Do not run pump without water |
| Pump runs but pro- duces no flow | | Pump is not primed | | Flood suction then restart pump |
| Pump fails to prime | | Air is trapped inside pump | | Disconnect discharge hose from pump. Flood suction hose, restart pump and run pump until all air has been evacuated |
| Pump looses prime, chattering noise, pressure fluctuates | 1 | Air leak in suction hose or inlet | 1 | Remove suction line and inspect it for a loose liner or debris lodged in hose. Avoid all unnec- essary bends. Do not kink hose |
| | 2 | Clogged suction strainer | 2 | Clean strainer |
| Low pressure at nozzle | 1 | Unloader valve is by-pass- ing | 1 | Make sure unloader is adjusted property and by-pass seat is not leaking |
| | 2 | Incorrect or worn nozzle | 2 | Make sure nozzle is matched to the flow and pressure of the pump. If the nozzle is worn, replace |
| | 3 | Worn packing or valves | 3 | Replace packing or valves |
| Pressure gauge fluc- tuates | 1 | Valves worn or blocked by foreign bodies | 1 | Clean or replace valves |
| | 2 | Packing worn | 2 | Replace packing |
| Low pressure | 1 | Worn nozzle | 1 | Replace with nozzle of proper size |
| | 2 | Belt slippage | 2 | Tighten or replace with correct belt |

Troubleshooting (cont.)

| Symptom | | Possible Cause(s) | | Corrective Action |
|--|---|--|---|---|
| Low pressure (cont.) | 3 | Air leak in inlet plumbing | 3 | Disassemble, reseal and reassemble |
| | 4 | Relief valve stuck, partially plugged or improperly adjusted valve seat worn | 4 | Clean and adjust relief valve; check for worn or dirty valve seats |
| | 5 | Worn packing. Abrasive in pumped in cavitation. Inadequate water | 5 | Install proper filter suction at inlet manifold must be limited to lifting less than 20 feet of water or 8.5 psi vacuum |
| | 6 | Worn inlet, discharge valve blocked or dirty | 6 | Replace inlet and discharge valve |
| Pump runs extremely rough, pressure very low | 1 | Inlet restrictions and/or air leaks. | 1 | Clean out foreign material |
| | 2 | Stuck inlet or discharge valve | 2 | Replace worn valves |
| Water leakage from under manifold | | Worn packing or cracked plunger | | Install new packing or plunger |
| Slight leak, oil leak- ing in the area of crankshaft | 1 | Worn crankshaft seal or improperly installed oil seal o-ring | 1 | Remove oil seal retainer and replace damaged 0-ring and/or seals |
| | 2 | Bad bearing | 2 | Replace bearing |
| Excessive play in the end of the crankshaft pulley | | Worn main bearing from excessive tension on drive belt | | Replace crankcase bearing and/or tension drive belt |
| Water in crankcase | 1 | Humid air condensing into water inside the crankcase | 1 | Change oil intervals |
| | 2 | Worn packing and/or cracked plunger | 2 | Replace packing. Replace plunger |
| Loud knocking noise in pump | 1 | Cavitation or sucking air | 1 | Check water supply is turned on |
| | 2 | Pulley loose on crankshaft | 2 | Check key and tighten set screw |
| | 3 | Broken or worn bearing | 3 | Replace bearing |

LIMITED WARRANTY

Annovi Reverberi (A.R.) Cam Shaft Plunger Pumps are warranted for a period of five years and Axial Radial Pumps are warranted for a period of one year to the original purchaser. Electric Pressure Washers are warranted for a period of one year to the original purchaser. This is from the date shipped from factory or U.S. Warehouse. AR, ArrowLine and GF accessories are warranted for a period of 90 days.

Warranty covers manufacturing defects or workmanship that may develop under normal use and service in a manner up to the directions and usage recommended by the manufacturer.

Warranty does not apply to misuse or when pump or accessory is altered or used in excess of recommended speeds, pressures, temperatures or handling fluids not suitable for pump or accessory material construction. Warranty does not apply to normal wear, freight damage, freezing damage or damage caused by parts or accessories not supplied by AR North America. Inc.

Liability of manufacturer for warranty is limited to repair or replacement at the option of the manufacturer when such products are found to be of original defect or workmanship at the time it was shipped from factory. This warranty is in lieu of all other warranties, expressed or implied, including any warranty of merchantability and of any and all other obligations or liabilities on the part of the manufacturers or equipment.

WARRANTY RETURNS

Items returned for warranty consideration must have a **Returned Merchandise Authorization (RMA)** number. All unauthorized returns will be refused and shipped back to sender. Please fax requests to: 763-398-2009 or e-mail to shop@arnorthamerica.com.
